**Japanese Battleships** Jul 20 2023 This fully illustrated guide offers historical context and step-by-step instruction for building and modifying Japanese battleship models. This volume in the ShipCraft series covers the two related classes of Japanese 14in-gunned battleships, originally built during the First World War but subsequently reconstructed. These ships are famous for their towering forward superstructure, usually described as a pagoda bridge, that they featured when rebuilt. The Ise-class ships underwent further

reconstruction during the Second World War to emerge as a unique hybrid of battleship and aircraft carrier to compensate for fleet carriers sunk earlier in the war. This lavishly illustrated guide takes readers through a brief history of the Fuso-class and Ise-class ships, highlighting differences between sisterships and changes in their appearance over their careers. It features color profiles of paint schemes as well as detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing, and provides hints on modifying and improving the basic kit. This volume also includes a photographic survey of selected high-quality models in a variety of scales and a section on further research references

**Demand for Disposable Aspen Chopsticks (Waribashi)** Sep 17 2020 Japan is the major

user of disposable chopsticks. Some 3 million cases (5,000 pairs per case) are consumed annually. Approximately 70% or 2.1 million cases are made from cedar, spruce and abies; aspen accounts for only 15%. This study investigates the potential use of Alberta aspen for chopsticks, and the export thereof.

*Titans of the Rising Sun* Sep 29 2021 Intended to be glorious symbols of Japanese power, the Yamato class suffered from the disadvantage of being designed at a crossroads in naval strategy in which advances in aviation technology began to shift the focus of sea power from the battleship to the aircraft carrier. The story of the Yamato class illustrates the closing of one chapter in the history of naval warfare while at the same time the opening of another.

**Electric Trucks** Jun 19 2023 Welcomed at end of the 19th century as the solution to the severe problem of horse manure in city streets, electric trucks soon became the norm for short-haul commercial deliveries. Though reliable, they were gradually replaced by gasoline-powered trucks for long-haul deliveries--although a fleet of electric milk trucks survived in Great Britain into the 1960s. Industrial electric vehicles never disappeared from factories and ports. During the past decade, with the availability of the lithium-ion battery, the electric truck is back on the road for all payloads and all distances. The fourth in a series covering the history and future of electric transport, this book chronicles the work of the innovative engineers who perfected e-trucks large and small.

**Battleships Fuso and Yamashiro** May 18 2023 HJMS Fuso was designed in 1911, the first Japanese super-dreadnought within the "8 x 8" program. She was the first of four twin battleships with her sister ship, Yamashiro, and the "improved Fuso-class" Ise and Hyuga.

Commissioned in 1915, Fuso, with 30,600 tons trial displacement and twelve 356mm guns in her main armament, was the biggest and most powerful battleship in the world. In twenty-nine years of service, Fuso underwent two major reconstructions and modernizations. Her distinctive silhouette, with the highest pagoda tower in the Imperial Navy, was visible in many operations of the Imperial Japanese Grand Fleet during the Pacific War. This book compares Fuso with Yamashiro, showing the differences in the way that the two ships were designed and equipped. Both ships met their demise during the Battle of Leyte Gulf when they went down in the Surigao Strait, targeted by torpedoes and gunfire from U.S. battleships and cruisers. Janusz Skulski's anatomies of three renowned ships of the 20th century Japanese navy are among the most comprehensive of the Anatomy series, with hundreds of meticulously researched drawings of the ships. This new edition is a genuine "Super Anatomy" containing the most detailed renditions of these ships ever seen.

**Energy in the West Nordics and the Arctic: Case Studies** Nov 19 2020 This project explores the energy systems and their development towards 2035 in the West Nordic areas and the Arctic. The objective of the project was to contribute to a knowledge base that can be shared and used in developing a sustainable and competitive energy systems that fulfil the goals and obligations for 2035 on climate, emissions and renewable shares. "Energy systems" in this case covers the potential for different renewable energy resources, infrastructure, the demand for energy in different sectors, and relevant policies. Along with the scenario analysis, five case studies have been developed: land transport; a

small hybrid energy system in Igaliku, Greenland; electrification of fishing vessels; tourism; and the future energy system in Svalbard.

**Submarine Stories** Aug 29 2021 Culled from many never-before-published narratives and oral histories conducted under the auspices of the U.S. Naval Institute, *Submarine Stories* presents nearly five dozen first-person accounts from men who were involved with gasoline—and diesel-powered submarines during the twentieth and twenty-first centuries. The story of these boats, their technological evolution and tactical value, is also the story of the men who went to sea in them. The accounts illustrate the human aspects of serving in diesel boats: the training, operations in peacetime and war, liberty exploits, humorous sidelights, and special feelings of bonding and camaraderie that grew among shipmates. Included here are some familiar names. Slade Cutter, who earned four Navy Crosses as a skipper in World War II, describes the process that made him a capable submariner. Dennis Wilkinson, first skipper of the nuclear-powered *Nautilus* in the 1950s, tells of being in the first missile-firing submarine in the 1940s. Robert McNitt recalls his experiences as executive officer to Medal of Honor skipper Gene Fluckey. Among the other submariners who present their personal memories are Jerry Beckley, contemplating the possibility of firing nuclear missiles during the 1962 Cuban crisis; Hosey Mays, describing what it was like to be a black man in a boat with a nearly all-white crew; Paul Foster, discussing the sinking a German U-boat in World War I; and Wayne Miller, explaining the enormous satisfaction he felt when he earned his silver dolphins.

**Battle of Surigao Strait** Sep 10 2022 “[Tully] paints Admiral Nishimura's high-speed run into history with an entirely fresh palette of detail.”

—James D. Hornfischer, New York Times—bestselling author of *Neptune's Inferno* Surigao Strait in the Philippine Islands was the scene of a major battleship duel during the Battle of Leyte Gulf. Because the battle was fought at night and had few survivors on the Japanese side, the events of that naval engagement have been passed down in garbled accounts. Anthony P. Tully pulls together all of the existing documentary material, including newly discovered accounts and a careful analysis of US Navy action reports, to create a new and more detailed description of the action. In several respects, Tully's narrative differs radically from the received versions and represents an important historical corrective. Also included in the book are a number of previously unpublished photographs and charts that bring a fresh perspective to the battle. “By giving a fuller view of the Japanese side, Tully's work forces a substantial revision of the traditional picture of the battle. Battle of Surigao Strait is not only military history based on scrupulous use of a plethora of new source materials, but is a spanking good read. Highly recommended.” —War in History “Tully has managed to trace the complicated flow of and reason for events on the nights of 24-25 October with a skill and aplomb that forces one to reconsider previously held views.” —Naval History

*Cemeterians* Jun 07 2022 Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.
