Pediatric Neurology Part I May 31 2020 Coma must persist for at least 1 hour to distinguish it from transient unconsciousness. Traumatic and nontraumatic coma are common problems in pediatric practice with high mortality and morbidity. Emergency neuroimaging is worthwhile even when etiology is known, as treatable complications, such as venous sinus thrombosis, as well as extradural and intracerebral hemorrhage, are commonly diagnosed. There is a wide range of possible etiologies in the previously well child, most of which may be diagnosed from neuroimaging and laboratory testing available as an emergency, or can be treated presumptively, e.g., with antimicrobials for infections. The modified Child's Glasgow Coma Scale (CGCS) for recording depth of consciousness in children is widely used and should be supplemented by examination for the signs of reversible central and uncal brainstem herniation due to acute intracranial hypertension. An evidence-based guideline for the investigation and management of decreased level of consciousness in children, written by an expert panel using the DELPHI principles, is available. Monitoring and rehabilitation should also be part of the management plan. Etiology, depth and duration of coma, and serial neurophysiology and imaging are predictors of outcome in survivors but must be interpreted cautiously. There are no reports of children meeting adult brain death criteria making good neurological recovery.

In the Time of the Butterflies Aug 03 2020 It is November 25, 1960, and three beautiful sisters have been found near their wrecked Jeep at the bottom of a 150-foot cliff on the north coast of the Dominican Republic. The official state newspaper reports their deaths as accidental. It does not mention that a fourth sister lives. Nor does it explain that the sisters were among the leading opponents of Gen. Rafael Leonidas Trujillo’s dictatorship. It doesn’t have to. Everybody knows of Las Mariposas—“The Butterflies.” In this extraordinary novel, the voices of all four sisters—Minerva, Patria, María Teresa, and the survivor, Dedé—speak across the decades to tell their own stories, from hair ribbons and secret crushes to gunrunning and prison torture, and to describe the everyday horrors of life under Trujillo’s rule. Through the art and magic of Julia Alvarez’s imagination, the martyred Butterflies live again in this novel of courage and love, and the human cost of political oppression.

Elements of Neo-Walrasian Economics Jul 14 2021 This book aims to explain to the readers the basic idea of the general equilibrium theory, which forms the core of the current mainstream economics called neoclassical school. To understand this theory is absolutely necessary, either to study further or to criticize the contemporary economic theories. The author not only explains traditional theories, but also makes clear the many problems which are still unsolved. As a text book or reference book for those students who are studying microeconomics for the first time, the author recommends the use of Chapter 1, Chapter 2 (except section 9), Chapter 3 (from section 1 to section 3, section 6, section 11), Chapter 4 (from section 1 to section 4), Chapter 5 (from section 1 to section 5, section 8), Chapter 6 (except sections 6 and 7), Chapter 7 (from section 1 to section 5), Chapter 8 (from section 1 to section 6) and Chapter 9 (sections 1, 4 and 7). For more advanced readers, the author recommends the remaining sections and the literature recommended in the last part of each chapter. Problems given at the end of each chapter allow readers to confirm understanding of the content of the chapter and suggest to the readers more advanced studies. Incidentally, the author tried to avoid the use of the advanced mathematics. Only elementary knowledge of differential calculus and linear algebra are required to read this book.
