The Children's Health Act mandated the National Children's Study (NCS) in 2000 with one of its purposes being to authorize the National Institute of Child Health and Human Development (NICHD) to study the environmental influences (including physical, chemical, biological, and psychosocial) on children's health and development. The NCS examines all aspects of the environment including air, water, diet, noise, family dynamics, and genetics, on the growth, development, and health of children across the United States, for a period of 21 years. The purpose of NCS is to improve the health and well-being of children and to contribute to understanding the role of these factors on health and disease. The research plan for the NCS was developed from 2005 to 2007 in collaboration among the Interagency Coordinating Committee, the NCS Advisory Committee, the NCS Program Office, Westat, the Vanguard Center principal investigators, and federal scientists. The current design of the study, however, uses a separate pilot to assess quality of scientific output, logistics, and operations and a "Main Study" to examine exposure-outcome relationships. The NCS proposed the use of a multilayered cohort approach for the Main Study, which was one of the topics for discussion at the workshop that is the subject of this publication. In the fall of 2012, NICHD requested that the Committee on National Statistics (CNSTAT) of the NRC and the IOM convene a joint workshop, to be led by CNSTAT. The workshop was to focus on issues related to the overall design (including the framework for implementation) of the NCS. The committee was provided a background paper which it used to select the challenges that were discussed at the workshop. Design of the National Children's Study: A Workshop Summary presents an overview of the workshop held on January 11, 2013. The publication includes summaries of the four sessions of the workshop, a list of participants, and the agenda. The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world. Supplies consumers with vital information needed to judge the safety of a wide variety of food additives, updating the reference to encompass the more than twelve thousand ingredients in new food products, and offers detailed explanations of food production technologies, safe storage procedures, and the new label regulations. Excerpt from Russia and Germany at Brest-Litovsk: A Documentary History of the Peace Negotiations To the Reader: With the following documentary account of the Brest-Litovsk Peace Negotiations, hitherto an unwritten chapter in the history of the Russian Revolution, the Department of Labor Research begins the publication of a series of monographs on economic and political questions which it is hoped will prove valuable contributions to the literature of the Socialist and Labor movements. The American Labor Year

Book, which the Department is publishing, will be continued as a part of the series. The 1919 issue (Vol. III) is now being prepared for the press and should be ready for distribution by the end of the Summer. Organizations and individuals interested in the work of the Department should address Alexander Trachtenberg, Director, Department of Labor Research, Rand School of Social Science, 7 East 15th St., New York. This study examines the recent work of Latin American liberation theologian Juan Luis Segundo. The author evaluates Segundo's resources in order to develop a more adequate contemporary Christological method. Stone offers to Christian systematic theology new critical interpretations of the significance of Jesus for human liberation today. Contents: INTRODUCTION: The Problem of Method in Contemporary Christology; The Nature and Task of Christology; The Situation in Liberation Theology; PART I. Segundo's Christology; The Dimension of Praxis: Faith and Ideologies; Jesus and History; The Evolutionary 'Key' to Christology; PART II. A Critical Appraisal of Segundo's Christology; Faith, Metaphysics and Praxis; Faith and History; Evolution and 'Effective Faith'; PART III. Toward an Alternative Liberation Christology; Jesus and Evolution. IDEO, the widely admired, award-winning design and development firm that brought the world the Apple mouse, Polaroid's I-Zone instant camera, the Palm V, and hundreds of other cutting-edge products and services, reveals its secrets for fostering a culture and process of continuous innovation. There isn't a business in America that doesn't want to be more creative in its thinking, products, and processes. At many companies, being first with a concept and first to market are critical just to survive. In *The Art of Innovation*, Tom Kelley, general manager of the Silicon Valley based design firm IDEO, takes readers behind the scenes of this wildly imaginative and energized company to reveal the strategies and secrets it uses to turn out hit after hit. IDEO doesn't buy into the myth of the lone genius working away in isolation, waiting for great ideas to strike. Kelley believes everyone can be creative, and the goal at his firm is to tap into that wellspring of creativity in order to make innovation a way of life. How does it do that? IDEO fosters an atmosphere conducive to freely expressing ideas, breaking the rules, and freeing people to design their own work environments. IDEO's focus on teamwork generates countless breakthroughs, fueled by the constant give-and-take among people ready to share ideas and reap the benefits of the group process. IDEO has created an intense, quick-turnaround, brainstorm-and-build process dubbed "the Deep Dive." In entertaining anecdotes, Kelley illustrates some of his firm's own successes (and joyful failures), as well as pioneering efforts at other leading companies. The book reveals how teams research and immerse themselves in every possible aspect of a new product or service, examining it from the perspective of clients, consumers, and other critical audiences. Kelley takes the reader through the IDEO problem-solving method: br" Carefully observing the behavior or "anthropology" of the people who will be using a product or servicebrbr" Brainstorming with high-energy sessions focused on tangible resultsbrbr" Quickly prototyping ideas and designs at every step of the waybrbr" Cross-pollinating to find solutions from other fieldsbrbr" Taking risks, and failing your way to successbrbr" Building a "Greenhouse" for innovation Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding, large-magnitude earthquakes, volcanic landscapes, petroliferous foreland basins, historical civilizations as well as geologic outcrops that display the protracted and complex 540 m.y. stratigraphic record of Earth's Phanerozoic Era. Emerged from the birth and demise of the Paleo-Tethys and Neo-Tethys oceans, southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia-Arabia continental plates. The region is characterized by the high plateaus of Iran and Anatolia fringed by the lofty ranges of Zagros, Alborz, Caucasus, Taurus, and Pontic mountains; the region also includes the strategic marine domains of the Persian Gulf, Gulf of Oman, Caspian, and Mediterranean. This 19-chapter volume, published in honor of Manuel Berberian, a preeminent geologist from the region, brings together a wealth of new data, analyses, and frontier research on the geologic evolution, collisional tectonics, active deformation, and historical and modern seismicity of key areas in southwest Asia. Read the series that's sold more than 2 million copies--if you dare! Warning: this description has not been authorized by Pseudonymous Bosch. As much as he'd love to sing the praises of his book (he is very vain), he wouldn't want you to hear about his brave 11-year old heroes, Cass and Max-Ernest. Or about how a mysterious box of vials, the Symphony of Smells, sends them on the trail of a magician who has vanished under strange (and stinky) circumstances. And he certainly wouldn't want you to know about the hair-raising adventures that follow and the nefarious villains they face. You see, not only is the name of this book secret, the story inside is, too. For it concerns a secret. A Big Secret. The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact

global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world. First published in 1988. Can you name the Seven Wonders of the Ancient World? Did they even exist? The Pharos at Alexandria survived into the Middle Ages, but the Hanging Gardens of Babylon exist only in references by ancient authors and the Colossus of Rhodes if too improbable to have existed in the form and place traditionally ascribed to it. The Seven Wonders of the Ancient World sets the record straight, with an attractive account of each Wonder in the context in which it was built. The authors combine ancient sources with the results of modern scholarship and excavations to recreate a vivid picture of the Seven Wonders. All experts in their specialist fields, the contributors bring together facts and background that are remarkably difficult to find from any other single source and establish for the first time the archaeology and location of each Wonder. ". . . the greatest contribution to [semiotics] since the pioneering work of C. S. Peirce and Charles Morris." —Journal of Aesthetics and Art Criticism ". . . draws on philosophy, linguistics, sociology, anthropology and aesthetics and refers to a wide range of scholarship . . . raises many fascinating questions." —Language in Society ". . . a major contribution to the field of semiotic studies." —Robert Scholes, Journal of Aesthetics and Art Criticism ". . . the most significant text on the subject published in the English language that I know of." —Arthur Asa Berger, Journal of Communication

Eco's treatment demonstrates his mastery of the field of semiotics. It focuses on the twin problems of the doctrine of signs—communication and signification—and offers a highly original theory of sign production, including a carefully wrought typology of signs and modes of production. A contemporary prose rendering of the great medieval French epic, *The Song of Roland* is as canonical and significant as the Anglo-Saxon *Beowulf*. It extols the chivalric ideals in the France of Charlemagne through the exploits of Charlemagne's nephew, the warrior Roland, who fights bravely to his death in a legendary battle. Against the bloody backdrop of the struggle between Christianity and Islam, *The Song of Roland* remains a vivid portrayal of medieval life, knightly adventure, and feudal politics. The first great literary works of a culture are its epic chronicles, those that create simple hero-figures about whom the imagination of a nation can crystallize, observed V. S. Pritchett. *The Song of Roland* is animated by the crusading spirit and fortified by national and religious propaganda. This edition features W. S. Merwin's glowing, lyrical translation. *The Nature of Photographs* is an essential primer of how to look at and understand photographs, by one of the world's most influential photographers, Stephen Shore. In this book, Shore explores ways of understanding photographs from all periods and all types - from iconic images to found photographs, from negatives to digital files. This book serves as an indispensable tool for students, teachers and everyone who wants to take better pictures or learn to look at them in a more informed way. The design and generation of modified involute helical gears that have a localized and stable bearing contact, and reduced noise and vibration characteristics are described. The localization of the bearing contact is achieved by the mismatch of the two generating surfaces that are used for generation of the pinion and the gear. The reduction of noise and vibration will be achieved by application of a parabolic function of transmission errors that is able to absorb the almost linear function of transmission errors caused by gear misalignment. The meshing and contact of misaligned gear drives can be analyzed by application of computer programs that have been developed. The computations confirmed the effectiveness of the proposed modification of the gear geometry. A numerical example that illustrates the developed theory is provided. The children of the forest live deep in the roots of an old pine tree. They collect wild mushrooms and blueberries and shelter under toadstools when it rains. They play with the squirrels and frogs, and when fall comes, they collect and prepare food to see them through the long winter, until the warm spring breeze starts to blow. A mini gift edition of Elsa Beskow's classic story. Excerpt from *Contested Election Case of George D. Reynolds V. James J. Butler*, From the Twelfth Congressional District of Missouri Dear sir: James J. Butler, the contestee in the above-entitled election contest, in response to your notice to be present at the city of Washington on Thursday, September 3, 1903, at the Opening of what purports to be the sealed testimony and evidence in said cause and agreeing on the parts thereof to be printed, respectfully objects, protests, and excepts to the printing of any matter which purports to be testimony or evidence taken in this cause for reasons following, viz: First. There was no evidence or testimony taken in this cause within the time prescribed by law, as will fully appear from the following statement of facts: On December 20, 1902, George D. Reynolds gave contestee notice of his intention to contest his seat in the Fifty-eighth Congress from the Twelfth Congressional district of Missouri, and on December 22, 1902, contestee answered said notice and served a copy of same on the said George D. Reynolds; that thereafter, on December 22, 1902, said George D. Reynolds served on contestee a notice of additional grounds of contest, which contestee immediately answered on December 23, 1902, and on the same day served a copy thereof upon said George D. Reynolds; that the foregoing facts will all appear from contestant's notices of contest and the returns of service on same, together with contestee's answers and the returns of service on same.
