Shemlan Sep 02 2020 Shemlan, a small, once unknown village in the hills overlooking Beirut, became notorious throughout the Middle East when Bertram Thomas chose it as the location for the Middle East Centre for Arab Studies (MECAS) in 1947. The knowledge that a western government was taking pains to teach its citizens Arabic and inform them of Arab history, society and religion made the Arabs suspicious. The success of MECAS in producing specialists who were the envy of other governments produced doubt and anxiety. The power of MECAS to attract British but also foreign diplomats and businessmen should have made it a profitable enterprise; instead there was constant penny-pinching and reluctance to invest. In retrospect it looks like an excellent idea developed by improvisation through its early troubles which was then allowed to die in its prime. Was it yet another example of a British invention unexploited?

September 11 Mar 01 2023 Following the World Trade Center (WTC) attack, federal funding was provided to government agencies and private organizations to establish programs for screening, monitoring, or treating responders for illnesses and conditions related to the WTC disaster. Federal funds appropriated or awarded for the WTC health programs from Oct. 2001 through Nov. 2007 have totaled \$261.1 million. NIOSH has awarded the bulk of the funding. These funds were provided for screening and monitoring services, outpatient and inpatient treatment, and program support. This report identifies the changes that NIOSH made for FY 2008 and to determine whether these changes represent an improvement. Charts and tables.

The Routledge Handbook of Census Resources, Methods and Applications Dec 26 2019 The collection of reliable and comprehensive data on the magnitude, composition and distribution of a country's population is essential in order for governments to provide services, administer effectively and guide a country's development. The primary source of basic demographic statistics is frequently a population census, which provides hugely important data sets for policy makers, practitioners and researchers working in a wide range of different socio-demographic contexts. The Routledge Handbook of Census Resources, Methods and Applications provides a comprehensive and authoritative guide to the collection, processing, quality assessment and delivery of the different data products that constitute the results of the population censuses conducted across the United Kingdom in 2011. It provides those interested in using census data with an introduction to the collection, processing and quality assessment of the 2011 Census, together with guidance on the various types of data resources that are available and how they can be accessed. It demonstrates how new methods and technologies, such as interactive infographics and web-based mapping, are now being used to visualise census data in new and exciting ways. Perhaps most importantly, it presents a collection of applications of census data in different social and health science research

contexts that reveal key messages about the characteristics of the UK population and the ways in which society is changing. The operation of the 2011 Census and the use of its results are set in the context of census-taking around the world and its historical development in the UK over the last 200 years. The results of the UK 2011 Census are a unique and reliable source of detailed information that are immensely important for users from a wide range of public and private sector organisations, as well as those working in Population Studies, Human Geography, Migration Studies and the Social Sciences more generally.
