This report on the water quality of Saugus Iron Works National Historic Site (SAIR) generated by the Northeast Temperate Network (NETN) Water Quality Monitoring Program includes data gathered in the 2011 monitoring season and

displays these results in graphic form, accompanied by a brief interpretation. Appendix A contains data collected from 2006 through 2011. Excerpt from Cambria Iron Works: Study of Alternatives, Johnstown, Pennsylvania Alternatives 53 Alternative A: Continue Operation and Management of the Cambria Iron Works by Bethlehem Steel Corporation 55 Description 55 Impacts 55 Alternative 8: Establish Cambria Iron Works National Historic District, with Management by the Johnstown Flood Museum Association 56 Description 56 Impacts 57 Alternative C: Establish Cambria Iron Works National Historic Site, with Management by the National Park Service 57 Description 57 Impacts 58 Alternative D: Establish Cambria Iron Works National Historical Park and Johnstown State Heritage Park 59 Description 59 Impacts 62. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of

imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works. This document details the vegetation classification and mapping which was completed for Saugus Iron Works National Historic Site, It includes a current digital geospatial vegetation database for the park. Six vegetation associations occurred within the park, and these were identified and described in detail. The associations were Northeastern Modified Successional Forest, Reed Canarygrass Eastern Marsh, Reed-grass Tidal Marsh, Cattail Brackish Tidal Marsh, Skunk-cabbage - Orange Jewelweed Seep, and Central Atlantic Freshwater Subtidal River Bed. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a

reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. The National Park Service initiated a restoration project at Saugus Iron Works National Historic Site to restore the historic turning basin and wetland area adjacent to the Saugus River in 2007. To fulfill regulatory requirements and enhance understanding of freshwater wetland restoration practices, an intensive, pre- and post-restoration monitoring program was implemented. This report summarizes monitoring data collected prior to the restoration and the first year (2008) after restoration. Data summaries included in this report describe the status of biotic (e.g., vegetation, nekton, avian, benthic invertebrate, and vegetation communities) and abiotic parameters (e.g., tidal hydrology, river geomorphology, sediment, and water quality). This is first of several monitoring reports associated with the restoration of the turning basin and wetlands at Saugus Iron Works National Historic Site. The Saugus Iron Works National Historic Site (site) conducted an

invasive plant survey during the summer of 2003 to generate baseline data in order to manage and assess the spatial impact of invasive plants. The primary goals of this study: 1) determine which invasive plant species inhabit the site; 2) determine the percent cover and density of the dominant invasive plant species; and 3) map where the dominant invasive plant species occur within the site. Excerpt from Archaeological Collections Management at the Saugus Iron Works National Historic Site, Massachusetts Appendix 10. Artifact Assemblage from Excavation Units Associated with Feature 2, the Possible 17.
