Data Modeling Made Simple will provide the business or IT professional with a practical working knowledge of data modeling concepts and best practices. This book is written in a conversational style that encourages you to read it from start to finish and master these ten objectives: Know when a data model is needed and which type of data model is most effective for each situation Read a data model of any size and complexity with the same confidence as reading a book Build a fully normalized relational data model, as well as an easily navigatable dimensional model Apply techniques to turn a logical data model into an efficient physical design Leverage several templates to make requirements gathering more efficient and accurate Explain all ten categories of the Data Model Scorecard Learn strategies to improve your working relationships with others Appreciate the impact unstructured data has, and will have, on our data modeling deliverables Learn basic UML concepts Put data modeling in context with XML, metadata, and agile development Book Review by Johnny Gay In this book review, I address each section in the book and provide what I found most valuable as a data modeler. I compare, as I go, how the book's structure eases the new data modeler into the subject much like an instructor might ease a beginning swimmer into the pool. This book begins like a Dan Brown novel. It even starts out with the protagonist, our favorite data modeler, lost on a dark road somewhere in France. In this case, what saves him isn't a cipher, but of all things, something that's very much like a data model in the form of a map! The author deems they are both way-finding tools. The chapters in the book are divided into 5 sections. The chapters in each section end with an exercise and a list of the key points covered to reinforce what you've learned. I find myself comparing the teaching structure of the book to the way most of us learn to swim. J. California Cooper writes with a transparent clarity and such exuberant energy that her characters leap off the page, bursting with stories they've got to tell-- stories of simple people, stories of families and fate, of love and marriage, of death and the triumph of the human spirit. The papers collected in this volume (including a comprehensive introduction) investigate semantic and discourse-related aspects of subordination and coordination, in particular the relationship between subordination/coordination at the sentence level and subordination/coordination – or

hierarchical/non-hierarchical organization – at the discourse level. The contributions in part I are concerned with central theoretical questions; part II consists of corpus-based cross-linguistic studies of clause combining and discourse structure, involving at least two of the languages English, German, Dutch, French and Norwegian; part III contains papers addressing specific – predominantly semantic – topics relating to German, English or French; and the papers in part IV approach the topic of subordination, coordination and rhetorical relations from a diachronic (Old Indic and Early Germanic) perspective. The book aims to contribute to a better understanding of information packaging on the sentence and text level related, within a particular language as well as cross-linguistically.

At various times in a span of fifteen years, John McPhee made geological field surveys in the company of Eldridge Moores, a tectonicist at the University of California at Davis. The

result of these trips is *Assembling California*, a cross-section in human and geologic time, from Donner Pass in the Sierra Nevada through the golden foothills of the Mother Lode and across the Great Central Valley to the wine country of the Coast Ranges, the rock of San Francisco, and the San Andreas family of faults. The two disparate time scales occasionally intersect—in the gold disruptions of the nineteenth century no less than in the earthquakes of the twentieth—and always with relevance to a newly understood geologic history in which half a dozen large and separate pieces of country are seen to have drifted in from far and near to coalesce as California. McPhee and Moores also journeyed to remote mountains of Arizona and to Cyprus and northern Greece, where rock of the deep-ocean floor has been transported into continental settings, as it has in California. Global in scope and a delight to read, *Assembling California* is a sweeping narrative of maps in motion, of evolving and dissolving lands. Based on the award-winning 10-million-plus-hit blog *1000 Awesome Things*, *The Book of Awesome* is an international bestselling high five for humanity and a big celebration of life's little moments. Sometimes it's easy to forget the things that make us smile. With a 24/7 news cycle reporting that the polar ice caps are melting, hurricanes are swirling in the seas, wars are heating up around the world, and the job market is in a deep freeze, it's tempting to feel that the world is falling apart. But awesome things are all around us, like:

- Popping Bubble Wrap
- Wearing underwear just out of the dryer
- Fixing electronics by smacking them
- Getting called up to the dinner buffet first at a wedding
- Watching The Price Is Right when you're home sick
- Hitting a bunch of green lights in a row
- Waking up and realizing it's Saturday

The Book of Awesome reminds us that the best things in life are free (yes, your grandma was right). With laugh-out-loud observations from award-winning comedy writer Neil Pasricha, *The Book of Awesome* is filled with smile-inducing moments on every page that make you feel like a kid looking at the world for the first time. Read it and you'll remember all the things there are to feel good about. Justin Hayes is richly blessed. He grew up the son of a preacher and a school teacher, and like most boys in the rural South, he grew up hunting and fishing. He earned his money in the tobacco and hay fields surrounding his home, and joined his senior class in the jungles of Vietnam. After returning home he married his high school sweetheart and raised a fine son. But being blessed doesn't mean that life is easy. He worked as a lineman for the power company and was always available to help his neighbors on their farms. His wife suddenly left him for a rich man when his son was ten years old, so he was left with a son to raise by himself. But now that was all behind him. Having inherited fortythree acres of land in the beautiful Appalachian Mountains, Justin retired and moved to his new property looking forward to spending his remaining years enjoying God's creation and relaxing in his new home. Unbeknownst to Justin, he had just moved into the center of a hornet's nest—a nest filled with lies and corruption, an evil neighbor, and a crooked sheriff. A nest that was under surveillance and monitored twenty-four hours a day. A nest that has ties to terrorism and organized crime with the most wretched and evil people who have ever walked the earth. Not being someone to back down from a fight, Justin digs his heels in for the fight of his life, but he is not

alone. Before this fight is over, the SBI, FBI, Homeland Security, CIA, and even the Pentagon line up behind him to defeat this monster. He will need all the skills he acquired in Vietnam, plus help and guidance from the Almighty to defeat this enemy. Introduces six simple machines, describing how they work in more complex machinery and how they are used every day. Don't just do it yourself - get it done! This book explains in plain English what are the laws governing divorce in California, how they may apply to your own circumstances, and what specific steps are needed to put it in writing and file it with the court.
