The rule of law is widely seen as the cornerstone of any effective polity and increasingly a vital component of the international political system. If the international rule of law were to be strengthened, it would greatly contribute to trade, security, human rights and global cooperation in a range of fields. Yet, in many areas the rule of law seems almost absent in international affairs. This book explores the institutions that support the effectiveness of the rule of law domestically. It focuses on the extent to which similar institutions already exist at international level and analyses the possibility of their further development. The authors speculate on how the international rule of law might be advanced in the future, thereby suggesting potential strategies for strengthening the international rule of law. Adopting an interdisciplinary approach and combining the fields of international relations, politics and law, this book covers a range institutions including: UN Security Council International Court of Justice Human rights machinery Regional human rights International Criminal Court World Trade Organization International Tribunal for the Law of the Sea UN Department of Peacekeeping Operations. It

will be of strong interest to students and scholars of international relations, international organisations, global governance, international law, migration law, international peace and security law, applied ethics, political economy, political science and sociology. Alzheimer's disease (AD) and dementia are the most common neurodegenerative disorder. Since the number of individuals with AD and dementia is expected to increase considerably in the near future, reliable treatment and diagnosis are critical. EEG and neurophysiological technique could be used as a cost-effective screening tool for early detection and diagnosis in the Mild Cognitive Impairment (MCI) stage. The aim in neurophysiology research is to develop signal processing methods that improve the specificity for diagnosing dementia; we wish to discover signal features that not only significantly differ in AD patients, but also allow us to reliably separate AD patients and control subjects. This approach is valuable for clinical purposes (as diagnostic tool for dementia), and it also more fundamentally contributes to a better understanding of brain dynamics of MCI patients. Finally, the development of neurophysiological biomarker could be useful in monitoring pharmacological treatments. The main focus of this special issue will be on the most recent developments and ideas in the field of EEG and neurophysiology which will enable us to extract features that improve the specificity for diagnosing AD and dementia. This work presents and discusses the latest approaches and strategies for implementing Sustainability and Green IT into higher education and business environments. Following the

global financial crisis in 2007/2008, businesses began to struggle coping with the increased IT/IS cost and their environmental footprint. As a consequence, action by universities to incorporate sustainability and 'Green IT' as parts of their teaching and learning materials, acknowledging their importance for global and local businesses, is being increasingly implemented. The book addresses the cooperation and coordination between academics and practitioners needed in order to achieve the changes required to obtain sustainability. Intended for researchers, lecturers and post-graduate students, as well as professionals in the Information Society and ICT and education sectors, and policy makers. The United States and 11 other countries from both sides of the Pacific are currently negotiating the Trans-Pacific Partnership (TPP). The agreement is expected to set new benchmark for international trade through its comprehensive coverage of issues and binding regulations. It is expected to eventually mature into a regional trade agreement covering the entire Asia-Pacific. As of now, it does not include China and India, the two largest emerging markets and regional economies. The TPP has generated controversy for its excessive emphasis on trade issues, which have remained unresolved or unaddressed at the WTO due to differences between developed and emerging markets. It has also been criticized for adopting a negotiating style reflecting the US regulatory approach to international trade and also as a geo-political strategy of the US for supporting its strategic rebalancing towards Asia. From both economic and geo-political perspectives, the TPP has various

significant implications for China and India that are examined in the book. This book sheds light on how China and India's entries in the TPP are mutually beneficial and how both countries can gain from the TPP by gaining preferential access to large markets and using it as an opportunity for introducing more outward-oriented reforms. The book also cautions that US must reconcile to the rebalancing of economic power within the grouping that will occur following the entries of China and India. Otherwise, the TPP and China and India might walk divergent paths and trade and regional integration in Asia-Pacific may not ever converge. This book will interest anyone who wishes to learn more about the TPP and its future implications and challenges and China and India's roles in global and regional trade. There continues to be strong interest within the food industry in developing new products which offer functional health benefits to the consumer. The premium prices that can be charged make these added-value products lucrative for manufacturers, and they are also commercially popular. Dairy foods are central to this sector: they are good delivery systems for functional foods (yoghurts, milk drinks, spreads) and are also rich in compounds which can be extracted and used as functional ingredients in other food types. Milk and Dairy Products as Functional Foods draws together a wealth of information regarding the functional health benefits of milk and dairy products. It examines the physiological role and the claimed health effects of dairy constituents such as proteins, bioactive peptides, conjugated linoleic acid (CLA), omega 3 fatty acids vitamin D and calcium. These constituents have been shown to be, for example, anticarcinogenic, anti-inflammatory, antihypertensive, hypocholesterolemic, immune-modulating and antimicrobial. This book examines the evidence for these claims, and investigates

practical approaches for utilising these attributes. The book is aimed at dairy scientists and technologists in industry and academia, general food scientists and technologists, microbiologists and nutritionists together with all those involved in the formulation and production of functional food products. This book constitutes the refereed conference proceedings of the 10th International Conference on Advances in Computer Entertainment, ACE 2013, held in Boekelo, The Netherlands, in November 2013. The 19 full paper and 16 short papers presented together 42 extended abstracts were carefully reviewed and selected from a total of 133 submissions in all categories. The papers cover topics across a wide spectrum of disciplines including new devices; evaluation and user studies; games as interface to serious applications; creating immersion; interfaces; new experiences; procedural approaches and AI; and theory. Focusing on all areas related to interactive entertainment they aim at stimulating discussion in the development of new and compelling entertainment computing and interactive art concepts and applications. Social media are now widely used for political protests, campaigns, and communication in developed and developing nations, but available research has not yet paid sufficient attention to experiences beyond the US and UK. This collection tackles this imbalance head-on, compiling cutting-edge research across six continents to provide a comprehensive, global, up-to-date review of recent political uses of social media. Drawing together empirical analyses of the use of social media by political movements and in national and regional elections and referenda, The Routledge

Companion to Social Media and Politics presents studies ranging from Anonymous and the Arab Spring to the Greek Aganaktismenoi, and from South Korean presidential elections to the Scottish independence referendum. The book is framed by a selection of keystone theoretical contributions, evaluating and updating existing frameworks for the social media age. Perfectly sized at 6" x 9" 120 pages Softcover Bookbinding Flexible Paperback This book analyses how the European Union translates its principles of peace and justice into policy and puts them into practice, particularly in societies in or emerging from violent conflict. The European Union treaty states that in its relations with the wider world, the EU is to promote peace, security, the protection of human rights, and the strict observance and the development of international law. The EU is active in peace processes around the world, yet its role in international peace mediation is largely ignored. This book offers the first scholarly analysis of how the EU engages in peace processes and justice for human rights violations, focussing on the point where mediation and transitional justice intersect. Drawing on extensive fieldwork, the book includes case studies of how the EU sought to promote peace and justice in the Democratic Republic of Congo (DRC), how it supports

international justice through the International Criminal Court, and a model of the EU as a mediator. These provide an evidence-base for policy makers and practitioners as well as strong empirical contributions to theory. The book addresses whether and how the EU pursues its principles of both peace and justice in conflict zones, where, in practice, these principles may be in conflict, and the implications of these findings for understanding EU foreign policy and the EU as a security actor. This book will be of much interest to students of EU foreign policy, transitional justice, peace and conflict studies and security studies. The 2nd edition of *Public History: A Practical Guide* provides a fresh examination of history as practiced in its various worldly guises and contexts. It analyses the many skills that historians require in the practice of public history and looks at how a range of actors, including museums, archives, government agencies, community history societies and the media/digital media, make history accessible to a wider audience in a variety of ways. Faye Sayer's exciting new edition includes: * Brand new chapters on 'Restoration and Preservation' and history and the working world * Substantial additions covering the growing fields of digital history and history in politics * More images, figures and international case studies from the US, Australia, the UK, Europe and Asia * 'Personal Reflection' sections from a range of industry experts from around the world * Historiographical updates and significant revisions throughout the text * Expanded online 'Public History Toolkit' resource, with a range of new features *Public History: A Practical Guide* delivers

a comprehensive outline of this increasingly prevalent area of the discipline, offering a distinctly global approach that is both accessible and engaging in equal measure. Finally, it explores future methodological possibilities and can be used as a reference point for professional development planning in the sectors discussed. This is the essential overview for any student wanting to know what history means beyond the classroom. Build a truly green home for the same total net cost as the conventional alternative This timely Research Handbook contains an analysis of various legal questions concerning cyberspace and cyber activities and provides a critical account of their effectiveness. Expert contributors examine the application of fundamental international law Since taking power in 2010, the Coalition Government in the United Kingdom has pushed through a drastic program of cuts to public spending, all in the name of austerity. The effects on large segments of the population, dependent on programs whose funding was slashed, have been devastating and will continue to be felt for generations. This timely book by journalist Mary O'Hara chronicles the real-world effects of austerity, removing it from the bland, technocratic language of politics and showing just what austerity means to ordinary lives. Drawing on hundreds of hours of first-person interviews with a wide range of people and, in the paperback edition, featuring an updated afterword by the author, the book explores the grim reality of living amid the biggest reduction of the welfare state in the postwar era and offers a compelling corrective to narratives of shared sacrifice. In an age where

official and sponsored violence are becoming normalised and conceived of as legitimate tools of peace keeping, a number of leading academics and activists represented in Pedagogy, Politics and Philosophy of Peace interrogate and resist the intensification of the militarisation of civil life and of international relations. Coming from different areas of study, the contributors to this volume discuss peace and critical peace education from a range of perspectives. The nature of peace, myths related to peace, the logistics of peace and peacemaking as well as the relation of peace and pedagogy in the broadest meaning of the term constitute the main themes of the book. The common thread that binds the chapters together is the distinction between genuine/authentic and false peace and the importance of critical reflection on actions that contribute to genuine peace. With the ongoing expansion of outbound foreign direct investment (FDI) in the countries representing the BRICS economic bloc (Brazil, Russia, India, China, and South Africa) - and with all of them at the same time listed among the top seven countries plagued by tax evasion and avoidance in the guise of illicit out flows - the ve governments, both individually and through cooperative initiatives, have devised new international tax strategies that are proving to be of great interest and value to other countries, both developing and developed. The core of these strategies addresses the necessity of stemming the out ow of revenue while strongly supporting FDI, both inbound and outbound while complying with international obligations including those arising from human rights laws. This book is the rst in-

depth commentary on this new and evolving area of international tax law. The detailed analysis covers the entire field of BRICS international tax law, considering topics such as the following: - information exchange procedures and pitfalls; - response to the OECD's Base Erosion and Profit-Sharing (BEPS) initiative; - role of bilateral and multilateral double taxation conventions including the Multilateral Instrument and the Bilateral Investment Treaties; - thin capitalization; - transfer pricing; - controlled foreign corporation rules; - shortcomings related to authorities' limited manpower; - international audit and investigation procedures; - the BRICS approach to residence and mandatory and binding arbitration; and - the BRICS approach to shaping the developing world's international tax system. Notably, the author personally conducted interviews with senior international representatives of the BRICS tax authorities, as well as with leading BRICS academics and practitioners. Tax cases, together with human rights and investment cases and administrative guidelines in all five countries are also included in the analysis. The study concludes with recommendations for improving each of the five countries' tax law and procedures, especially in the area of dispute resolution. The author's goal is to extend the existing body of knowledge of the BRICS' international tax laws in order to assist in developing an understanding of the BRICS approach to dealing with evasion and avoidance: an approach which facilitates both outbound and inbound FDI, simplifies tax authority administration and establishes a basis for resolving international

disputes which is compatible with sovereignty. In achieving this objective, the author has produced a major work that is of immeasurable value to tax advisers, government and governance officials, academics and researchers both in developing international taxation strategies and in helping to resolve disputes with tax authorities.

Spermatogenesis is a process highly conserved throughout vertebrate species and is mainly under hypothalamic-pituitary control. It occurs in the testis in a stepwise fashion so that committed spermatogonia develop into spermatocytes and enter meiosis to produce round spermatids. These undergo a morphological transformation (spermiogenesis) into mature spermatids (i.e.: spermatozoa), which are differentially released from Sertoli cells (spermiation) depending on the species. In mammals, further transformations are necessary to form mature spermatozoa, suitable for fertilization.

Gonadotropins, mainly responsive to gonadotropin-releasing hormone, control spermatogenesis through specific receptors located at the gonadal level. However, besides the endocrine route, the chemical mediators may also act locally in the gonad. Indeed, it is documented that testis physiology, including steroidogenesis and spermatogenesis, does not fully account for traditional endocrine control but an intragonadal network of autocrine and/or paracrine regulators also exists, whose activity, via cell-to-cell communication, regulates germ cell progression and development of qualitatively mature spermatozoa. Of note, a number of testicular modulators, such as gonadotropin releasing hormone, Kiss-peptin, endocannabinoids, has been early isolated in the

brain and latest in the gonads. To fully understand precise mechanisms underlying the functional interaction of this intricate network, needless to say, it is crucially required to have detailed information about modulators and target cells. Through synergy between the respective specializations of all the authors, this topic reviewed emerging knowledge about neuroendocrine and local mediators controlling germ cell progression and maturation. Using case studies and the results of extensive fieldwork, this book considers the nature of state power and legal violence in liberal democracies by focusing on the interaction between law, science, and policing in India. The postcolonial Indian police have often been accused of using torture in both routine and exceptional criminal cases, but they, and forensic psychologists, have claimed that lie detectors, brain scans, and narcoanalysis (the use of "truth serum," Sodium Pentothal) represent a paradigm shift away from physical torture; most state high courts in India have upheld this rationale. The Truth Machines examines the emergence and use of these three scientific techniques to analyze two primary themes. First, the book questions whether existing theoretical frameworks for understanding state power and legal violence are adequate to explain constant innovations of the state. Second, it explores the workings of law, science, and policing in the everyday context to generate a theory of state power and legal violence, challenging the monolithic frameworks about this relationship, based on a study of both state and non-state actors. Jinee Lokaneeta argues that the attempt to replace physical torture

with truth machines in India fails because it relies on a confessional paradigm that is contiguous with torture. Her work also provides insights into a police institution that is founded and refounded in its everyday interactions between state and non-state actors. Theorizing a concept of Contingent State, this book demonstrates the disaggregated, and decentered nature of state power and legal violence, creating possible sites of critique and intervention. The clothing industry employs 25 million people globally contributing to many livelihoods and the prosperity of communities, to women's independence, and the establishment of significant infrastructures in poorer countries. Yet the fashion industry is also a significant contributor to the degradation of natural systems, with the associated environmental footprint of clothing high in comparison with other products. Routledge Handbook of Sustainability and Fashion recognizes the complexity of aligning fashion with sustainability. It explores fashion and sustainability at the levels

of products, processes, and paradigms and takes a truly multi-disciplinary approach to critically question and suggest creative responses to issues of:

- Fashion in a post-growth society
- Fashion, diversity and equity
- Fashion, fluidity and balance across natural, social and economic systems

This handbook is a unique resource for a wide range of scholars and students in the social sciences, arts and humanities interested in sustainability and fashion. This book reflects on how the economies, social characteristics, ways of life and global relationships of rural areas of Europe have changed in recent years. This reveals a need to refresh the concepts we use to understand, measure and describe rural communities and their development potential. This book argues that Europe has 'outgrown' many of the stereotypes usually associated with it, with substantial implications for European Rural Policy. Rural structural change and its evolving geography are portrayed through regional typologies and the concept of the New Rural Economy. Demographic change, migration, business networks and agricultural restructuring are each explored in greater detail. Implications for equality and social exclusion, and recent developments in the field of governance are also considered. Despite being a subject of active debate, interventions in the fields of rural and regional development have failed to adapt to changing realities and have become increasingly polarized. This book argues that rural/regional policy needs to evolve in order to address the current complex reality, partially reformulating territorial or place-based approaches, and the New Rural Paradigm, following a set of

principles termed 'Rural Cohesion Policy'. Since the adoption of the Rome Statute of the International Criminal Court in 1998, international criminal law has rapidly grown in importance. This three-volume treatise on international criminal law presents a foundational, systematic, consistent, and comprehensive analysis of the field. Taking into account the scholarly literature, not only sources written in English but also in French, German, Italian, Portuguese, and Spanish, the book draws on the author's extensive academic and practical work in international criminal law. This third volume offers a comprehensive analysis of the procedures and implementation of international law by international criminal tribunals and the International Criminal Court. Through analysis of the framework of international criminal procedure, the author considers each stage in the process of proceedings before the ICC, including the role of legal participants, the scope of jurisdiction, and the enforcement of sentences. The full three-volume treatise addresses the entirety of international criminal law, re-stating and re-examining the fundamental principles upon which it rests, the manner it is enacted, and the key issues that are shaping its future. It is essential reading for practitioners, scholars, and students of international criminal law alike. The problem of clinical pain management is complex and far-reaching, as it encompasses many different types of pain, such as arthritis, musculoskeletal conditions, neuropathic pain, and visceral pain. It is widely known that many of the well-established analgesic pathways are centrally based, involving spinal and supraspinal sites. However, pain can also be effectively controlled by peripheral pathways. The analgesics market is growing and the driving forces are the aging population and need for better therapeutic benefits. There are various analgesic products that are available that can be administered by various routes, yet research is active in identifying new technologies for better drug targeting and novel targets to gain improved therapeutic efficiency. This e-Book "PAIN - novel targets and new technologies" has brought together experts in the field of pain at the physiological, pharmacological and pharmaceutical levels to discuss novel pain targets and new pain technologies across the various types of pain. This information is presented as novel research findings, short communications and review articles. The goal of this e-Book is to generate further collaborative discussion on the future and direction of pain therapies. The 2014 Referendum on Scottish independence sparked debate on every dimension of modern statehood. Levels of public interest and engagement were unprecedented, as demonstrated by record-breaking voter turnout. Yet aside from Trident, the issue of security was relatively neglected in the campaigns, and there remains a lack of literature on the topic. In this volume Andrew

Neal has collated a variety of interdisciplinary perspectives on security and constitutional change in Scotland and the UK, including writing from experts in foreign policy analysis, intelligence studies, parliamentary studies, and journalism. *Security in a Small Nation* provides an illuminating analysis of the politics of security. Its authors reflect on a number of related issues including international comparisons, alliances, regional cooperation, terrorism, intelligence sharing, democratic oversight, and media coverage. It has a particular focus on what security means for small states and democratic politics. The book draws on current debates about the extent of intelligence powers and their implications for accountability, privacy, and human rights. It examines the foreign and security policy of other small states through the prism of Scottish independence, providing unique insight into the bureaucratic and political processes associated with multi-level security governance. These contributions provide a detailed picture of the changing landscape of security, including the role of diverse and decentralised agencies, and new security interdependencies within and between states. The analysis presented in this book will inform ongoing constitutional debates in the UK and the study of other secessionist movements around the world. *Security in a Small Nation* is essential reading for any follower of UK and Scottish politics, and those with an interest in security and nationhood on a global scale. Russias transition towards a market economy in the early 1990s called for new approaches to the regulation of employment relations in the post-Soviet period in

order to strike a balance between employers interests and employees rights in changed conditions. The adoption of the Labour Code of the Russian Federation (LC RF) in 2001 contributed to solving the issue only partly, as, in reality, it was passed as a compromise between different political forces, and consists of both provisions which can be implemented in the new context of the market economy and restrictions inherited from the planned economy. The recent and ever-changing socio-economic conditions, and the increasing complexity of the employer-employee relationship, which is a result of both globalization and technological progress, required the further development of Russian employment legislation. This resulted in substantial amendments being made to the original LC RF in 2006, with the majority of its provisions being profoundly revised. Nevertheless, a thorough analysis of the changes currently under way shows that many aspects concerning employment relations have still not been addressed sufficiently. The papers collected in the present volume of the ADAPT Labour Studies Book Series consider the recent developments of the legal regulation of employment relations as well as some closely related aspects from a historical and comparative perspective, in order to provide some insights into these issues and to examine current challenges.

Vibrios are Gram-negative bacilli that occur naturally in marine, estuarine, and freshwater systems. Some species include human and animal pathogens capable of causing gastroenteritis, wound infections, cholera, and fatal septicemia. Over the past decades, cutting edge research on *Vibrio* genomics has promoted a

tremendous advance in our knowledge of these pathogens. Significant developments include the discovery of emerging epidemic clones, tracking the spread of new strain variants, and an intensified appreciation of the role of mobile genetic elements in antibiotic resistance spread as well as pathogenesis. Furthermore, improved understanding of the interaction of Vibrios with a variety of living organisms in the aquatic environment has documented the significant role of environmental reservoirs in their seasonal cycle favoring persistence of the pathogen during inter-epidemic periods and enhancing disease transmission. This Research Topic is dedicated to our current understanding in these areas and will bring together leading experts in the field to provide a deep overview of Vibrios ecology and evolution, and will suggest the pathway of future research in this field. It is no longer the case that it's only society which benefits from CSR actions. A corporation actually helps itself when operating sustainably and does well because of its triple bottom line actions. The editors of People, Planet and Profit believe that whilst Corporate Social Responsibility is by now a familiar concept to academics or practitioners, insufficient attention has been paid to the end product of CSR in practice, which they define in terms of social and economic developmental effect. The contributions in this edited volume explain the developmental aspect of CSR from a conceptual perspective and provide empirical evidence of the impact of CSR delivery on stakeholders in different corners of the World. The emphasis is on what corporations take from and give back to their stakeholders whilst trying to behave

in a corporately responsible fashion. Stakeholders, including employees, customers, host communities, governments and NGOs have diverse interests and expectations of CSR. This gives rise to questions about whether the activities corporations support are the ones today's stakeholders need; whether the CSR programmes being delivered are adequate; and about the relationship between the corporations' view of what constitutes CSR and that of the supposed beneficiaries. This book offers thoughtful answers to these questions and assesses the outcomes of corporate activities both in developed and developing countries and regions, in terms of economic progress and social and political advancement. Endocrinological research early recognized the importance of intercellular interactions and realized the importance of glutamatergic and GABAergic signaling. In turn this signalling depends on elaborate interactions between astrocytes and neurons, without which neurons would be unable to produce, reuse and metabolize transmitter glutamate and GABA. Details of these subjects are described in this Research Topic by key investigators in this field. It focuses on the intricate and extremely swift pathway producing these amino acid transmitters from glucose in brain but also discusses difficulties in determining expression of some of the necessary genes in astrocytes and related processes in pancreatic islets. However, it does not discuss how closely associated astrocytes and neurons are anatomically, enabling these interactions. This is elegantly shown in this cover image, kindly provided by Professor Andreas Reichenbach (University of Leipzig,

Germany). The media environment of today is characterised by two critical factors: the development and adoption of ubiquitous mobile devices, and the strengthening of connectivity enabled by advances in ICT infrastructure and social media platforms. These developments have changed interactions and relationships between citizens and cultural custodians, as well as the ways archives are developed, kept, and used. Archives are now characterised by greater socialisations and networks that actively contribute to the signification of cultural heritage value. A range of new stakeholders, many of whom include the public, have sought to define what needs to be collectively remembered and forgotten. The world in which one or a few professional archivists worked on the sole mission of shaping how a society remembers is being displaced by a more democratised culture and the new generation of digitally networked archivists that are its natives. Using a range of case studies and perspectives, this book provides insights to the many ways that ubiquitous media have influenced archival practices and research, as well as the social and civic consequences of present-day archives. This book was published as a special issue of Archives and Manuscripts. The period between 2001 and 2008 saw the longest commodities boom in recent history. Resource-rich countries across the world developed more interest in the profits, control and ownership of their natural resources. South Africa, which did not benefit much from the boom in commodity prices, was nonetheless affected by the emergent resource nationalism trend, and it became the focus of the governing party's 2010 National

General Council, which ultimately resulted in the constitution of a committee to review the country's policy and legislative framework regarding 'natural wealth beneath the soil'. Although the resurgence of resource nationalism is a recent phenomenon, the idea of state intervention in the economy, and the extractive sector in particular, is not new.

Resurgent Resource Nationalism is a qualitative study, undertaken by MISTRA for SASOL Ltd, that looks at the resurgence of resource nationalism over the past ten years. It discusses the concept of resource nationalism and its manifestation in public policy. It identifies the concerns, drivers and instruments through which resource nationalism is pursued by various mining jurisdictions across regions. It deliberately focuses more on the hydrocarbons sector in order to suit the target audience. The aim is to observe macro-trends emerging in various regions of the world and explore how best private actors can respond to the various forms of resource nationalism. This book aims to further a debate about aspects of "playing" and "gaming" in connection with history. Reaching out to academics, professionals and students alike, it pursues a dedicated interdisciplinary approach. Rather than only focusing on how professionals could learn from academics in history, the book also ponders the question of what academics can learn from gaming and playing for their own practice, such as gamification for teaching, or using "play" as a paradigm for novel approaches into historical scholarship. "Playing" and "gaming" are thus understood as a broad cultural phenomenon that cross-pollinates the theory and practice of history and

gaming alike. This book documents and highlights the Deobandi dimension of extremism and its implications for faith-based violence and terrorism. This dimension of radical Islam remains largely ignored or misunderstood in mainstream media and academic scholarship. The book addresses this gap. It also covers the Deobandi diaspora in the West and other countries and the role of its radical elements in transnational incidents of violence and terrorism. The specific identification of the radical Deobandi and Salafi identity of militants is useful to isolate them from the majority of peaceful Sunni and Shia Muslims. Such identification provides direction to governmental resources so they focus on those outfits, mosques, madrassas, charities, media and social medial channels that are associated with these ideologies. This book comes along at a time when there is a dire need for alternative and contextual discourses on terrorism. This book examines the much-debated question of how to unleash the potential of young people with promising intellectual abilities and motivation. It looks at the increasingly important topic of excellence in education, and the shift in focus towards the provision of programs to support talented students in higher education. It provides a systematic overview of programs for talented students at northern European higher education institutions (HEIs). Starting in the Netherlands, where nearly all HEIs have developed honors programs over the past two decades, the book explores three clusters of countries: the Benelux, the Nordic and the German-speaking countries. For each of these countries, it discusses the local culture towards excellence, the

structure of the education system, and the presence of honors programs. In total, the book reviews the special talent provisions for nearly four million students at 303 higher education institutions in eleven countries. In addition, it offers an analysis of the reasons to develop such programs, a look into the future of honors education and a practical list of suggestions for further research. The Sirius Program assigned Marca Wolfensberger to carry out this research. The Interlaw book on Renewable Energy is a comprehensive overview of renewable energy policies and developments in the major countries active in the field. It addresses, in a practical and legal perspective, the main interrogations encountered by investors and policy makers on how to efficiently deploy renewable energy, particularly in terms of support schemes, grid connection costs, priority and congestion rules or permitting.
