This book provides key insights into how educational leaders can successfully navigate the turbulence of political debate surrounding leading student assessment and professionalised practice. Given the highly politicised nature of assessment, it addresses leaders and aspiring leaders who are open to being challenged, willing to explore controversy, and capable of engaging in informed critical discourse. The book presents the macro concepts that these audiences must have to guide optimal assessment policy and practice. Collectively, the chapters highlight important assessment purposes and models, including intended and unintended effects of assessment in a globalised context. The book provides opportunities to explore cultural similarities and particularities. It invites readers to challenge taken-for-granted assumptions about ourselves and colleagues in other settings. The chapters highlight the cultural clashes that may occur when cross-cultural borrowing of assessment strategies, policies, and tools takes place. However, authors also encourage sophisticated critical analyses of potential lessons that may be drawn from other contexts and systems. Readers will

encounter challenges from authors to deconstruct their assessment values, beliefs, and preconceptions. Indeed, one purpose of the book is to destabilise certainties about assessment that prevail and to embrace the assessment possibilities that can emerge from cognitive dissonance. Who was the biggest, baddest outlaw in the Old West? Billy the Kid or Jesse James? Which outlaw did the most to wreak havoc across the frontier? And which outlaw left behind the biggest legacy? Author Bill Markley takes on those questions and more in this thoughtful and entertaining examination of these legendary lives.

Dance and Creativity within Dance Movement Therapy discusses the core work and basic concepts in dance movement therapy (DMT), focusing on the centrality of dance, the creative process and their aesthetic-psychological implications in the practice of the profession for both patients and therapists. Based on interdisciplinary and multidisciplinary inputs from fields such as philosophy, anthropology and dance, contributions examine the issues presented by cultural differences in DMT through the input of practitioners from several diverse countries. Chapters blend theory and case studies with personal, intimate reflections to support critical descriptions of DMT interventions and share methods to help structure practice and facilitate communication between professionals and researchers. The book's multicultural, multidisciplinary examination of the essence of dance and

its countless healing purposes will give readers new insights into the value and functions of dance both in and out of therapy. Life imprisonment has replaced the death penalty as the most common sentence imposed for heinous crimes worldwide. Consequently, it has become the leading issue of international criminal justice reform. In the first survey of its kind, Dirk van Zyl Smit and Catherine Appleton argue for a human rights–based reappraisal of this harsh punishment. Teacher Education and Practice, a peer-refereed journal, is dedicated to the encouragement and the dissemination of research and scholarship related to professional education. The journal is concerned, in the broadest sense, with teacher preparation, practice and policy issues related to the teaching profession, as well as being concerned with learning in the school setting. The journal also serves as a forum for the exchange of diverse ideas and points of view within these purposes. As a forum, the journal offers a public space in which to critically examine current discourse and practice as well as engage in generative dialogue. Alternative forms of inquiry and representation are invited, and authors from a variety of backgrounds and diverse perspectives are encouraged to contribute. Teacher Education & Practice is published by Rowman & Littlefield. This book constitutes the refereed proceedings of the Second SKLOIS Conference on Information Security and Cryptology, Inscrypt 2006, held in Beijing, China in

November/December 2006. The 23 revised full papers cover digital signature schemes, sequences and stream ciphers, symmetric-key cryptography, cryptographic schemes, network security, access control, computer and applications security, as well as Web and media security. Describes points of interest in Tokyo, recommends hotels and restaurants, and suggests day trips outside the city

Parametric optimization, especially in machining of non-ferrous alloys seems to be quite rare and needs an immediate attention because of its associated downstream financial and non-financial losses. This book tries to fill the gap and presents an optimization problem of commonly used Al-7020 Alloy. Principles of Response Surface Methodology (RSM) have been implemented through Minitab software to bring necessary multi-response optimization, while turning on a CNC turner. The present study focuses on to enhance Material Removal Rate (MRR) while simultaneously reducing the Surface Roughness (Ra), during turning of Al-alloy. Such opposite natured response optimization is much difficult to achieve, particularly when uncoated carbide tip has been used as a cutting tool. Intensive literature survey helps to pin point parameters like; Cutting Speed, Feed Rate and Depth of Cut as a most critical to machining parameters, as far as effective and efficient optimization of selected responses are concerned. All these control-parameters are directly or inversely related to each other. If the depth of cut is

increased MRR increases at the same time we get poor surface finish. Increase in the cutting speed has positive impact on both material removal rate and surface finish. Shortlisted parameters are conflicting, so we have to optimize these for further enhancement of the overall turning performance. At last, the optimized results are verified by using ANOVA as a statistical tool. This book provides quite rare Case-study of multi-response optimization (while non-ferrous CNC turning) to practioners, machinists and SME owners appropriately. An academic legal colloquium was held under the title 'Globalization and Law' in Tokyo in September/October 2005. The present volume is published in German and Japanese and is a starting-point for academics in both countries. Early training in the elementary techniques of partial differential equations is invaluable to students in engineering and the sciences as well as mathematics. However, to be effective, an undergraduate introduction must be carefully designed to be challenging, yet still reasonable in its demands. Judging from the first edition's popularity, instructors and students agree that despite the subject's complexity, it can be made fairly easy to understand. Revised and updated to reflect the latest version of Mathematica, Partial Differential Equations and Boundary Value Problems with Mathematica, Second Edition meets the needs of mathematics, science, and engineering students even better. While retaining

systematic coverage of theory and applications, the authors have made extensive changes that improve the text's accessibility, thoroughness, and practicality. New in this edition: Upgraded and expanded Mathematica sections that include more exercises An entire chapter on boundary value problems More on inverse operators, Legendre functions, and Bessel functions Simplified treatment of Green's functions that make it more accessible to undergraduates A section on the numerical computation of Green's functions Mathematica codes for solving most of the problems discussed Boundary value problems from continuum mechanics, particularly on boundary layers and fluctuating flows Wave propagation and dispersion With its emphasis firmly on solution methods, this book is ideal for any mathematics curricula. It succeeds not only in preparing readers to meet the challenge of PDEs, but also in imparting the inherent beauty and applicability of the subject. Seit Jahren empfehlen Ärzte und Ernährungsberater, sich möglichst salzarm zu ernähren, da Salz Herzerkrankungen fördere und bereits vorhandene Beschwerden gefährlich verschlimmern könne. Aber was wäre, wenn dieser altbekannte Ratschlag falsch ist? James DiNicolantonio hat mehr als 500 Publikationen zum Thema ausgewertet, um herauszufinden, welche Auswirkungen Salz wirklich auf unseren Blutdruck und unser Herz hat. Seine überraschende Erkenntnis: Salzreiche Ernährung hat für

die meisten Menschen keine negativen Folgen. Im Gegenteil – die Aufnahme von mehr Salz ist sogar gesundheitsfördernd. Die Aufnahme von zu wenig Salz sorgt nämlich dafür, dass wir mehr Lust auf Zucker und Kohlenhydrate verspüren und dass der Körper entkräftet wird und in einen Mangelzustand gerät. Zudem kann zu wenig Salz zu Gewichtszunahme, Insulin-Resistenz, Diabetes Typ 2, kardiovaskulären Erkrankungen, chronischen Nierenkrankheiten, erhöhtem Blutdruck und zu erhöhter Herzfrequenz führen. Die individuell richtige Salzversorgung hingegen ist eine essenzielle Grundlage für ein gutes Allgemeinbefinden: Genügend Salz führt zu besserem Schlaf, mehr Energie, höherer mentaler Leistungsfähigkeit und sogar zu einer verbesserten Fruchtbarkeit. Zudem ist der Körper besser vor chronischen Krankheiten und Herzerkrankungen geschützt. Der Autor klärt nicht nur über die Gefahren einer salzarmen Ernährung auf, sondern zeigt in seinem praktischen Ratgeber auch die besten Wege, Salz wieder in die Ernährung zu integrieren. Mit seinem Fünf-Schritte-Programm kann jeder die für ihn individuell passende Salzversorgung ganz einfach selbst herausfinden. Ein praktischer Ratgeber, der wertvolle Aufklärung über die richtige Salzernährung leistet. A compelling exploration of how social norms and commercial culture impact the safety of organizational operations In Impact of Societal Norms on Safety, Health, and the Environment: Case

Studies in Society and Safety Culture, distinguished engineer Dr. Lee T. Ostrom delivers an authoritative treatment of the cultural, social, and human factors of safety cultures and issues in the workplace. The book offers readers compelling discussions of how those factors impact organizational operations and what contributes to making those impacts beneficial or detrimental. The author provides numerous real-world case studies from North America and Europe that are relevant to a global audience, highlighting the central message of the book: that an organization that views its safety culture as unimportant could be setting itself up for a significant workplace accident. Readers will also find: A thorough introduction to social norms that impact how commercial organizations treat issues of safety and workplace health In-depth safety culture case studies from North America and Europe Comprehensive explorations of how peoples' perceptions of hazards impact workplace operations and the daily lives of employees Fulsome discussions of the effect of societal attitudes on workplace health and safety Perfect for industrial and safety managers, safety coordinators, and safety representatives, **Impact of Societal Norms on Safety, Health, and the Environment** will also earn a place in the libraries of industrial hygienists, ergonomic program coordinators, and HR professionals. A collection of 28 refereed papers grouped according to four broad topics: duality and optimality

conditions, optimization algorithms, optimal control, and variational inequality and equilibrium problems. Suitable for researchers, practitioners and postgrads. Teaching with film is not a new approach in the social studies classroom. Different publications, such as *Hollywood or History*, have bridged the gap with challenges attached to using historical film and engage students through inquiry, not entertainment. To continue with the *Hollywood or History* strategy, this text uses television shows (sitcoms) to bring issue-centered curriculum to middle and high school classrooms. By exploring issues in specific episodes, students can learn the history behind an issue, relate it to their lives, and develop an informed decision associated with the issue. The College, Career, and Civic Life (C3) framework is an integral part to the exploration of issue-centered curriculum. In each chapter, the students will work through the four dimensions and develop critical thinking, reading, and writing skills. My hope is that this text can play a small role in walking practicing teachers through the C3 framework while allowing students to learn about issues that affect society and the communities where they live. Reframing the American story from the vantage point of the nation's watery edges, Jamin Wells shows that disasters have not only bedeviled the American beach--they created it. Though the American beach is now one of the most commercialized, contested, and engineered places on the planet, few people visited it or called it home

at the beginning of the nineteenth century. By the twentieth century, the American beach had become the summer encampment of presidents, a common destination for millions of citizens, and the site of rapidly growing beachfront communities. *Shipwrecked* tells the story of this epic transformation, arguing that coastal shipwrecks themselves changed how Americans viewed, used, and inhabited the shoreline. Drawing on a broad range of archival material--including logbooks, court cases, personal papers, government records, and cultural ephemera--Wells examines how shipwrecks laid the groundwork for the beach tourism industry that would transform the American beach from coastal frontier to oceanfront playspace, spur substantial state and private investment alongshore, reshape popular ideas about the coast, and turn the beach into a touchstone of the American experience.

Solving the Leadership Jigsaw Puzzle

You have a key leadership job to fill. You want the very best person. What exactly does this really mean? How often have you seen someone with great credentials and terrific buzz take an important job, but before long people are wondering “what exactly were we thinking?” Getting the best person is less about finding an individual superstar and more about deeply understanding what your organization needs, the kind of person who will fit into your culture and bring the right experience and skills to get the job done. Based on decades of experience at

Spencer Stuart, the gold standard in executive search, Jim Citrin and Julie Daum cut through conventional wisdom and “rules of thumb,” whether the job that needs filling is that of CEO or a key leader in marketing, technology, finance, or human resources. • Landmark original research from the United States, the UK, Germany, France, and the Netherlands provides evidence for how an organization can diagnose its needs and decide on who is the right leader for a specific situation at a particular point in time, and whether an outsider or insider would best fit the bill. • Eye-opening case studies, including how the New York Public Library worked its way through the maze of pressures—rapidly changing technologies, diverse, demanding constituencies, changing demographics and economic forces—to find the president who could best carry on its mission in the twenty-first century; how Starwood Hotels assessed the value of experience versus potential in choosing a CEO; the person who failed in one circumstance but achieved extraordinary success in others. • Steering clear of the red herrings of age, experience, and ethnicity • Avoiding the biggest traps of leadership selection, such as “his charisma was intoxicating,” and “we thought we really knew him.” In a competitive environment as challenging as today’s, the one difference, as Sheryl Sandberg, the COO of Facebook notes, “Between companies that change the world and those that don’t is having the right people.” You Need a Leader—Now What?

is the must-have guide for navigating the terrain. This book highlights the fact that leaders do indeed affect the performance of organizations or the well-being of society for better or worse--to cast either a shadow or light by the exercise of their leadership. Modern psychology with its theories of human behavior, which does not acknowledge the existence of the spiritual realm, cannot explain the carnage and evil often associated with the dark side of leadership. This book focuses on the dark side of leadership in a multidimensional manner and provides a psychospiritual approach toward understanding personality disorders and leader derailment. It highlights an area that has not been exclusively studied by leadership researchers to date--the influence of spiritual forces in personality disorders, which lead to leadership failure and derailment. This book calls for a more interdisciplinary approach and holistic understanding of the dark side of leadership, inseparably relating body, soul, and spirit as they function individually and relationally. It highlights the fact that the restoration of personality will require sustained dialogue between theologians and the medical and psychological professions. This book provides solid information and new insights for anyone seeking to understand the dark side of leadership. The author presents research and her perspectives on how the teachings of the Catholic Church both liberate and dignify women. This 1st volume in the series History of the Theory

of Numbers presents the material related to the subjects of divisibility and primality. This series is the work of a distinguished mathematician who taught at the University of Chicago for 4 decades and is celebrated for his many contributions to number theory and group theory. 1919 edition. Sustainable Water Resources in the Built Environment covers elements of water engineering and policy making in the sustainable construction of buildings with a focus on case studies from Panama and Kenya. It provides comprehensive information based on case studies, experimental data, interviews, and in-depth research. The book focuses on the water aspects of sustainable construction in less economically developed environments. It covers the importance of sustainable construction in developing country contexts with particular reference to what is meant by the water and wastewater aspects of sustainable buildings, the layout, climate, and culture of sites, the water quality tests performed and results obtained, the design of rainwater harvesting systems and policy considerations. The book is a useful resource for practitioners in the field working on the water aspects of sustainable construction (international aid agencies, engineering firms working in developing contexts, intergovernmental organizations and NGOs). It is also useful as a text for water and sanitation practices in developing countries. Visit the IWA WaterWiki to read and share material related to this title:

<http://www.iwawaterwiki.org/xwiki/bin/view/Articles/SustainabilityinWaterSupply> At no point in recorded history has there been an absence of intense, and heated, discussion about the subject of how to conduct relations between women and men. This Handbook provides a comprehensive guide to these omnipresent issues and debates, mapping the present and future of thinking about feminist theory. The chapters gathered here present the state of the art in scholarship in the field, covering: Epistemology and marginality Literary, visual and cultural representations Sexuality Macro and microeconomics of gender Conflict and peace. The most important consensus in this volume is that a central organizing tenet of feminism is its willingness to examine the ways in which gender and relations between women and men have been (and are) organized. The authors bring a shared commitment to the critical appraisal of gender relations, as well as a recognition that to think ‘theoretically’ is not to detach concerns from lived experience but to extend the possibilities of understanding. With this focus on theory and theorizing about the world in which we live, this Handbook asks us, across all disciplines and situations, to abandon our taken-for-granted assumptions about the world and interrogate both the origin and the implications of our ideas about gender relations and feminism. It is an essential reference work for advanced students and academics not only of feminist

theory, but of gender and sexuality across the humanities and social sciences. The only end-to-end guide to securing Apache Web servers and Web applications Apache can be hacked. As companies have improved perimeter security, hackers have increasingly focused on attacking Apache Web servers and Web applications. Firewalls and SSL won't protect you: you must systematically harden your Web application environment. Preventing Web Attacks with Apache brings together all the information you'll need to do that: step-by-step guidance, hands-on examples, and tested configuration files. Building on his groundbreaking SANS presentations on Apache security, Ryan C. Barnett reveals why your Web servers represent such a compelling target, how significant exploits are performed, and how they can be defended against. Exploits discussed include: buffer overflows, denial of service, attacks on vulnerable scripts and programs, credential sniffing and spoofing, client parameter manipulation, brute force attacks, web defacements, and more. Barnett introduces the Center for Internet Security Apache Benchmarks, a set of best-practice Apache security configuration actions and settings he helped to create. He addresses issues related to IT processes and your underlying OS; Apache downloading, installation, and configuration; application hardening; monitoring, and more. He also presents a chapter-length case study using actual Web attack logs and data captured "in the wild."

an inclusive future Contested histories, subversive memories Gendered lives, racial frameworks Cultural shifts, social change Black identities, feminist formations Within these sections, a diverse range of women, places, and issues are explored, including ancient African queens, Black women in early modern European art and culture, enslaved Muslim women in the antebellum United States, Sally Hemings, Phillis Wheatley, Black women writers in early twentieth-century Paris, Black women, civil rights, South African apartheid, and sexual violence and resistance in the United States in recent history. The Routledge Companion to Black Women's Cultural Histories is essential reading for students and researchers in Gender Studies, History, Africana Studies, and Cultural Studies. This book examines the experiences of the first graduates from The Doctor of Social Sciences (DSocSci) program at Royal Roads University, Canada's first applied research doctorate designed exclusively for working professionals. The program was developed in response to a growing demand nationally and internationally for scholar-practitioners who are leaders in their professional fields and who want to incorporate dedicated research and writing into their professional lives. Contributors describe their unique experiences in framing and conducting research that was outside the boundaries of discipline-based research and that was driven by issues on the ground.
