Spatial Analysis in Health Geography Jun 15 2021 Presenting current research on spatial epidemiology, this book covers topics such as exposure, chronic disease, infectious disease, accessibility to health care settings and new methods in Geographical Information Science and Systems. For epidemiologists, and for the management and administration of health care settings, it is critical to understand the spatial dynamics of disease. For instance, it is crucial that hospital administrators develop an understanding of the flow of patients over time, especially during an outbreak of a particular disease, so they can plan for appropriate levels of staffing and to carry out adaptive prevention measures. Furthermore, understanding where and why a disease occurs at a certain geographic location is vital for decision makers to formulate policy to increase the accessibility to health services (either by prevention, or adding new facilities). Spatial epidemiology relies increasingly on new methodologies, such as clustering algorithms, visualization and space-time modelling, the domain of Geographic Information Science. Implementation of those techniques appears at an increasing pace in commercial Geographic Information Systems, alongside more traditional techniques that are already part of such systems. This book provides the latest methods in GI Science and their use in health related problems.

American Jewish Year Book 2016 Nov 01 2022 The American Jewish Year Book, now in its 116th year, is the annual record of the North American Jewish communities and provides insight into their major trends. Part I presents a forum on the Pew Survey, "A Portrait of American Orthodox Jews." Part II begins with Chapter 13, "The Jewish Family." Chapter 14 examines "American Jews and the International Arena (April 1, 2015 – April 15, 2016), which focuses on US–Israel Relations. Chapters 15-17 analyze the demography and geography of the US, Canadian, and world Jewish populations. In Part III, Chapter 18 provides lists of Jewish institutions, including federations, community centers, social service agencies, national organizations, synagogues, Hillels, day schools, camps, museums, and Israeli consulates. In the final chapters, Chapter 19 presents national and local Jewish periodicals and broadcast media; Chapter 20 provides academic resources, including Jewish Studies programs, books, articles, websites, and research libraries; and Chapter 21 presents lists of major events in the past year, Jewish honorees, and obituaries. An invaluable record of Jewish life, the American Jewish Year Book illuminates contemporary issues with insight and breadth. It is a window into a complex and ever-changing world. Deborah Dash Moore, Frederick G. L. Huetwell Professor of History and Judaic Studies, and Director Emerita of the Frankel Center for Judaic Studies, University of Michigan A century from now and more, the stately volumes of

the American Jewish Year Book will stand as the authoritative record of Jewish life since 1900. For anyone interested in tracing the long-term evolution of Jewish social, political, religious, and cultural trends from an objective yet passionately Jewish perspective, there simply is no substitute. Quantitative Models for Value-Based Supply Chain Management Jun 27 2022 ??????Supply chain management (SCM) strives for creating competitive advantage and value for customers by integrating business processes from end users through original suppliers. However, the question of how SCM influences the value of a firm is not fully answered. Various conceptual frameworks that explain the coherence of SCM and company value, comprehended as value-based SCM, are well accepted in scientific research, but quantitative approaches to value-based SCM are found rather seldom. The book contributes to this research gap by proposing quantitative models that allow for assessing influences of SCM on the value of a firm. Opposed to existing models that limit the observation to chosen facets of SCM or selected value drivers, this holistic approach is adequate to • reflect configurational and operational aspects of SCM, • cover all phases of the product life cycle, • financially compare value impacts of profitability-related and asset-related value drivers, and • assess influences of dynamics and uncertainties on company value.?

New Developments in the Brewing Industry Jun 03 2020 Institutions and ownership play a central role in the transformation and development of the beer market and brewing industry. Institutions set the external environment of the brewery through both formal requirements and informal acceptance of company operations by the public. On the other hand, owners and managers adapt to these external challenges while following their own strategic agenda. This book explores the implications of this dynamic for the breweries, discussing how changes in institutions have contributed to the restructuring of the industry and the ways in which breweries have responded, including a craft beer revolution with a surge in demand of special flowered hops, a globalization strategy from the macro breweries, outsourcing by contract brewing, and knowledge exchange for small sized breweries. Structured in two parts, with a focus on institutions (Part I) and ownership (Part II) respectively, this book examines the link between institutions and governance in one of the most dynamic and innovative industries.

PAMP Signals in Plant Innate Immunity Apr 01 2020 Plant innate immunity is a potential surveillance system of plants and is the first line of defense against invading pathogens. The immune system is a sleeping system in unstressed healthy plants and is activated on perception of the pathogen-associated molecular patterns (PAMP; the pathogen's signature) of invading pathogens. The PAMP alarm/danger signals are perceived by plant pattern-recognition receptors (PRRs). The plant immune system uses several second messengers to encode information generated by the PAMPs and deliver the information downstream of PRRs to proteins which decode/interpret signals and initiate defense gene expression. This book describes the most fascinating PAMP-PRR signaling complex and signal transduction systems. It also discusses the highly complex networks of signaling pathways involved in transmission of the signals to induce distinctly different defense-related genes to mount offence against pathogens.
