As students begin finalizing college and career decisions, they are faced with tough choices that impact the next 2 to 42 years of their lives. While career decisions can be challenging for anyone, they seem more difficult for students who are considering careers in music. Although there are many viable music career options, there is considerable uncertainty regarding the types of jobs available, and the skills and other traits that help student musicians determine if they will be a good fit in their chosen careers. As a result, music students commonly feel lost regarding music career decisions, turning to parents and teachers who feel just as ill-equipped to provide insight. Music Career Advising: A Guide for Parents Students and Teachers answers the most common music career questions through research-based career advising strategies, a comprehensive inventory of music careers, bibliography of print and on-line music career resources, and additional information gathered through interviews with leading musicians in the field, and faculty members in some of the most prestigious university music programs in the country. The

message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service. The end result of applying the techniques described here is a computer system that can store millions of documents, and retrieve the documents that contain any given combination of keywords in a matter of seconds or fractions of a second. Written for an eclectic audience of information professionals and for graduate courses. Sections for technically or theoretically oriented readers can be skipped by others without loss of continuity. Annotation copyright by Book News, Inc., Portland, OR The Yucca Mountain Integrating Model (YMIM) is an integrated model of the engineered barrier system. It contains models of the processes of waste container failure and nuclide release from the fuel rods. YMIM is driven by scenarios of container and rod temperature, near-field chemistry, and near-field hydrology provided by other modules. It is designed to be highly modular so that a model of an individual process can be easily modified to replaced without interfering with the models of other processes. This manual describes the process models and provides instructions for setting up and running YMIM Version 2.1. Recently, there has been interest by regulators, the public and the manufacturers of wireless devices in the issues relating to the safety of radio frequency (RF) energy. These issues require an understanding of the scientific underpinnings of both physics of RF energy and cellular biology. This book is designed to provide precisely such cross-functional expertise. The editors of this book intend to provide a reliable source for a sound scientific understanding of the issues and to stimulate future scientific advances in this area. Therefore, the audience for this book includes such diverse groups as scientists, governmental policy-makers and regulatory bodies, representatives of industry and the public at large.
