This popular antidepressant can also be  
prescribed to treat chronic lower back pain.  
BOTOX -- Many physicians are now using this  
popular cosmetic injection to treat severe  
headaches and migraine. XANAX -- To relieve  
irritable bowel syndrome, physicians are now  
prescribing this drug approved for anxiety  
disorders. PROZAC and ZOLOFT -- To relieve  
the symptoms of menopause, these two popular  
antidepressants are now being prescribed.  
Common disorders such as Lyme disease,  
insomnia, arthritis, osteoporosis, PMS,  
diabetes, fibro-myalgia, high blood pressure,  
and even hay fever can all be treated with off-  
label prescription drugs. More and more  
physicians and researchers are discovering that  
many drugs are effective for off-label uses --  
uses that go beyond what the FDA had  
originally approved. Off-label prescription  
drugs have become so popular that, today, one  
out of every four prescriptions written is off-  
label. That's a whopping 115 million off-label  
prescriptions a year. Off-label prescriptions are

completely legal and are a vital alternative for optimal patient care. But until now, there has been no book to inform and guide patients about off-label uses of drugs. The Guide to Off-Label Prescription Drugs provides you with the latest information on more than 1,500 breakthrough uses for prescription drugs. It is the only reference that gives you the tools you need to have informed dialogues with your doctor about managing your health care needs. Here, you'll discover the most recent findings about new, breakthrough options to treat everything from anxiety to diabetes. Also included is detailed information about scientific studies supporting the drugs' uses, possible drug side effects, cautions, food and herbal interactions, and risks for pregnant or breast-feeding women. CAUTION: CALL YOUR DOCTOR BEFORE STARTING OR STOPPING THE USE OF ANY DRUG.
