Many people love using grid paper notebook, because it is easy for design, drafting, drawing, and to-do listing, it can be used as a notebook, journal, diary or planner. This grid paper notebook features the cute quote "You're A Fin-Tastic Valentine" on the cover. It can be used at school, at college, at laboratory, at geometry class, at office or at home. It is also a great resource for math & science student, architect or artist. It is the best gift both personal and useful. It is the sweet gift for your girlfriend, boyfriend, wife, husband or lover. Ideal to show your love on Valentine's Day, 10th 20th 30th 40th 50th 60th 70th 80th wedding anniversary or birthday. A unique gift for long distance relationships for her or him. It is also the gift idea for the White Elephant Gift Exchange/Dirty Santa/Yankee Swap Party or any other holiday occasion where gifts are needed. Cover: Matte soft cover Paper: Black & white interior with white paper, quad ruled 5x5 Size: 8.5 x 11 in / 21.59 x 27.94 cm (larger than most size) Length: 100 sheets / 200 pages (thicker than most size) Come along on a rhyming tour through the amazing animal kingdom—from mammals to millipedes and everything in between—with this engaging picture book about how all creatures are connected! There are so many wild and wonderful animals in our world. Some have fur, some have feathers, some have fins, but all are connected. This fact-filled rhyming exploration of the diversity of the animal kingdom celebrates mammals, birds, insects, fish, reptiles, amphibians, and more! It's a perfect match for budding naturalists and animal enthusiasts everywhere. fin: a story of love and hope Three young boys form and unlikely friendship and soon discover that despite their differences, they had more in common than they realized. When an unexpected tragedy occurs, the young men's bond is put to the test. A test of friendship, of loyalty, of family, and of love. For one of them, their choices would shape

his life, mold him into the man he had to become, and place him on the precipice of deathfinA story of love and hope, triumph, and tragedy of a young man's journey into manhood. The general purpose of this investigation was to study the separated flow field associated with a fin-body juncture. Specific objectives included: (a) determining the severity and extent of aerodynamic heating, (b) providing flow visualization results to illustrate the flow structure, and (c) obtaining a data base of heat-transfer and surface-pressure measurements upon which to develop future analytical relations to predict peak interference heating levels. Tests were conducted at Mach 5 over a unit Reynolds number range of 4.5 to 26 million per foot. A fin-cone model was used. The data consist of surface- pressure distributions, heat-transfer measurements using the phase-change paint technique, and schlieren and oil-flow photographs. Results are presented for several fin-cone geometries to include fin sweep and fin-cone gap. Where possible, comparisons are made with fin-flat-plate data. It may be concluded that the stalling of vertical tail surfaces is not in itself a dangerous condition. Provided sufficient directional stability exists at large angles of sideslip, the tail stall may occur with modern airplanes, as with those of the past, without the knowledge of or concern to the pilot. Various flow-visualization results are presented for a cylindrically blunted, unswept fin (yawed and unyawed) partially immersed in a turbulent boundary layer (delta approx. = 2.6 inches). The model, consisting of a fin-flat plate combination, was tested at a nominal Mach number of 5 and nominal free-stream Reynolds numbers per foot of 2800 000 and 7400 000. Azobenzene tests show regions of high heat transfer on the flat plate immediately upstream and downstream of the fin. Oil smear tests show in detail the surface shear directions and locations of separated flow which occur on the model. Schlieren and shadowgraph photographs indicate the complex shock wave structure which exists in front of the fin. A possible flow-field model is suggested to account for the observed flow patterns. (Author). Warned against leaving the deep sea where he is safe, a young eel nevertheless goes exploring and becomes stranded on the beach. Featuring innovative research by emergent and established scholars, The Fin-de-Siecle Poem throws new light on the remarkable diversity of poetry produced at the close of the nineteenth century in England. Opening with a detailed preface that shows why literary historians have frequently underrated fin-de-siecle poetry, the collection explains how a strikingly rich body of lyrical and narrative poems anticipated many of the developments traditionally attributed to Modernism. Each chapter in turn provides insights into the ways in which late-nineteenth-century poets represented their experiences of the city, their attitudes toward sexuality, their responses to empire, and their interest in religious belief. The eleven essays presented by editor Joseph Bristow pay renewed attention to the achievements of such legendary writers as Oscar Wilde, John Davidson, Ernest Dowson, Lionel Johnson, and W.B. Yeats, whose careers have always been associated with the 1890s. This book also explores the lesser-known but equally significant advances made by notable women poets, including Michael Field, Amy Levy, Charlotte Mew, Alice Meynell, A. Mary F. Robinson, and Graham R. Tomson. The Fin-de-Siecle Poem brings together innovative research on poetry that has been typecast as the attenuated Victorianism that was rejected by Modernism. The contributors underscore the remarkable innovations made in English poetry of the 1880s and 1890s and show how woman poets stood shoulder-to-shoulder with their better-known male contemporaries. Joseph Bristow is professor of English at the University of California, Los Angeles, where he edits the journal Nineteenth-Century Literature. His recent books include The Cambridge Companion to Victorian Poetry, Oscar Wilde: Contextual Conditions, and the variorum edition of Oscar Wilde's The Picture of Dorian Gray. Using the friendship of two mermaids, Emily and Shona, as a guide, describes what makes a best friend and provides quizzes and activities for best friends to share. In the Greenwich Village of 1964, eleven-year-old Fin moves in with his glamorous, careless older sister, and it's hard to tell who's raising whom. Spin-tunnel tests have been conducted on dynamic models of two fighter airplanes to explore the feasibility of using deployable flexible ventral fins as an emergency spin-recovery device. Various fin configurations, deflections, and locations were tested. The results indicated that the fins provided satisfactory spin recoveries for the models tested. A method of constructing a strong, cheap, lightweight fin for single-shot rocket

application is described. Test procedures and data are included. Victims of the Book uncovers a long-neglected but once widespread subgenre: the fin-de-siècle novel of formation in France. Novels about and geared toward adolescent male readers were imbued with a deep worry over young Frenchmen's masculinity, as evidenced by titles like *Crise de jeunesse* (Youth in Crisis, 1897), *La Crise virile* (Crisis of Virility, 1898), *La Vie stérile* (A Sterile Life, 1892), and *La Mortelle Impuissance* (Deadly Impotence, 1903). In this book, François Proulx examines a wide panorama of these novels, many of which have rarely been studied, as well as polemical essays, pedagogical articles, and medical treatises on the perceived threats posed by young Frenchmen's reading habits. Against this cultural backdrop, he illuminates all that was at stake in representations of the male reader by prominent novelists of the period, including Jules Vallès, Paul Bourget, Maurice Barrès, André Gide, and Marcel Proust. In the final decades of the nineteenth century, social commentators insistently characterized excessive reading as an emasculating illness that afflicted French youth. Fin-de-siècle writers responded to this pathologization of reading with a profusion of novels addressed to young male readers, paradoxically proposing their own novels as potential cures. In the early twentieth century, this corpus was critically revisited by a new generation of writers. Victims of the Book shows how Gide and Proust in particular reworked the fin-de-siècle paradox to subvert cultural norms about literature and masculinity, proposing instead a queer pact between writer and reader. This comprehensive and beautifully illustrated collection of essays conveys a vivid picture of a fascinating and hugely significant period in history, the Fin de Siècle. Featuring contributions from over forty international scholars, this book takes a thematic approach to a period of huge upheaval across all walks of life, and is truly innovative in examining the Fin de Siècle from a global perspective. The volume includes pathbreaking essays on how the period was experienced not only in Europe and North America, but also in China, Japan, the Middle East, Latin America, Africa, India, and elsewhere across the globe. Thematic topics covered include new concepts of time and space, globalization, the city, and new political movements including nationalism, the "New Liberalism", and socialism and communism. The volume also looks at the development of mass media over this period and emerging trends in culture, such as advertising and consumption, film and publishing, as well as the technological and scientific changes that shaped the world at the turn of the nineteenth century, such as the invention of the telephone, new transport systems, eugenics and physics. The Fin-de-Siècle World also considers issues such as selfhood through chapters looking at gender, sexuality, adolescence, race and class, and considers the importance of different religions, both old and new, at the turn of the century. Finally the volume examines significant and emerging trends in art, music and literature alongside movements such as realism and aestheticism. This volume conveys a vivid picture of how politics, religion, popular and artistic culture, social practices and scientific endeavours fitted together in an exciting world of change. It will be invaluable reading for all students and scholars of the Fin-de-Siècle period. Harry Hammer wants to befriend a tiger shark and become a sports legend at Shark Point Scout Camp in this fifth Shark School (mis)adventure. Harry Hammer has a new hero: Turbo Tex, a gold-medal-winning tiger shark. Maybe Harry can be just like him at Shark Point Scout Camp! Tony, another tiger shark, joins the group right in time for their annual sports camp, and Harry is over the moon. But Tony doesn't seem to want to be friends. How can Harry change Tony's mind and make his sporting dreams come true? Get ready for some more Fin-tastic fish fun in this third hilarious illustrated chapter book in Mo O'Hara's New York Times bestselling series. When Tom and his best friend Pradeep zapped Frankie the goldfish back to life with a battery, they certainly didn't expect him to become a BIG FAT ZOMBIE GOLDFISH with incredible hypnotic powers. But it turns out that a zombie goldfish is a great pet to have on your side when your big brother is an evil scientist whose plans need to be thwarted. There's something fishy going on in the woods, as Tom and his best friend Pradeep take Frankie on a camping adventure. Could the Beast of Burdock Woods be real? Then, something weird is going on with Mark. He's actually being . . . nice! Meanwhile, paranormal pets (including a teleporting tortoise, a mostly invisible poodle, a levitating budgie, and a vampire kitten) are missing all over town. Can Tom and Pradeep find out what's going on before Frankie disappears? An analytical study of a flat condenser-radiator with a double fin-tube geometry (closed sandwich) with variable tube side-wall thickness was performed for a Rankine space-power electric-generating system. The analysis of the double fin radiator included consideration of

tube and header pressure drops, meteoroid protection for the tubes and headers, along with a detailed presentation of the heat rejection analysis and total weight characteristics. The double fin-tube radiator is compared to a conventional central fin-tube configuration on a heat rejection to weight basis for a four-panel radiator configuration. Both fin and tube geometries are compared on the basis of the same power level, working fluid temperature, tube and header pressure drop, radiator material, and meteoroid protection criteria. A beryllium radiator for a 1-megawatt system and a columbium alloy radiator for a 500-kilowatt system, both at a radiating temperature of 1700 R, were chosen for the weight and geometry comparison. The conclusion reached indicates a substantial weight savings can be realized with the double fin-tube arrangement if the tube side-wall thickness can be reduced as a result of a possible meteoroid bumper effect of the enclosing fins. Weight reductions compared to the central fin-tube geometry of up to 32 to 39 percent were shown to be possible for the maximum reduction in side-wall thickness in the two examples considered. This result further substantiated the preliminary conclusions given in an earlier reference that compared the double and central fin-tube configurations neglecting the effects of headers, pressure drops, tube wall temperature drop, and powerplant thermodynamic cycle considerations.
