**second installment in the Laminated Wood Art series focuses on using a multi-generational process to create unique, symmetrical wood art patterns with intricate designs. This straightforward method involves cutting laminated strips of different wood species at various angles and gluing them back together to develop new, repeated configurations. The designs discussed in this book employ evenly balanced patterns that can be manipulated to form new, more complicated designs. Artistic concepts naturally evolve with each generation. Learn how to build a pair of end table tops, then take these indispensable principles and use your imagination to combine them into new artistic shapes and displays. Friendly instructions and images of different phases of completion result in symmetrical multi-generational patterns using four generations. The author also covers many woodworking basics, such as safety, tools, materials, wood movement, and moisture. The original publication was designed and written to draw comparisons between the use of wood veneer and laminated plastics in the manufacture of domestic furniture. It discusses in layman's terms the production methods of both from the raw materials. It goes on to describe how they are applied in the fabrication process. Finally, it looks at the wider implications and draws conclusions from their continued use at an ever increasing rate in a worldwide consumer culture. Step-by-step photos and instructions for projects involving lamination -- the bonding together of two or more pieces of wood -- are provided in this guide to using wood lamination as an art form. Depending on the intricacy of the design, lamination can be either very simple or astoundingly complex. The ten projects presented here are of all differing skill levels and abilities, often presenting fascinating challenges that help woodworkers develop their laminating skills. Several designs for clocks and puzzles are included, as are unique pieces such as a piggy bank, a basket weave box, and a cutting board. Cutting and laminating, or gluing, wood for artistic effect and unique design**

has been part of woodworking throughout history. Now it's your turn to discover the beauty and complexity of "multi-generational" concepts. With today's improved tool technologies, this fun and surprisingly simple process is sure to become the average woodworking and home shop enthusiast's new playground. Nature provides the various wood grains, textures, and vibrant colors. Then, you combine those aspects into forms whose dimensions and variations are limited only by your imagination. Friendly instructions and helpful images break down the full-stripe pattern in three "generations," beginning with straight stripes, and resulting in kaleidoscopic, multi-contrast designs that will amaze your friends and family. The author covers, in detail, safety, jig design, tools, wood movement and moisture, and other woodworking basics. Using this foundation you can develop the lamination methods provided and eventually your own with confidence. Using the three basic approaches to producing curved parts -- laminate bending, steam bending, and milling by machine -- this book provides step-by-step instructions on each method, the pros and cons of each project, and how to troubleshoot problems. Also included are discussions and advice as to what methods will work and what methods will not in various applications.
