Everything you need to know to ensure you have a "soft landing" as you come off antidepressants A guide to getting off SSRI antidepressants and starting your drug free life again, from Benjamin Kramer, best-selling author of "Brain Renovation". In this clear and concise guide, Benjamin Kramer gives you an easy to implement blueprint for coming off antidepressants such as SSRIs (Selective Serotonin Re-uptake Inhibitors) using a variety of little-known techniques and tips. With a scientifically-designed tapering plan, including the use of certain other drugs and supplements where required, you can avoid coming in for landing too hard and crashing. Done properly, you CAN have a soft landing off antidepressants. If you are reading this, you are probably taking one of the following drugs and have decided that it is time to slowly start tapering down - Prozac (Fluoxetine) Lexapro (Escitalopram) Zoloft (Sertraline) Effexor (Venlafaxine) Cymbalta (Duloxetine) Or one of the other atypical antidepressants such as mirtazapine (Remeron/Avanza), buspirone (Buspar), tianeptine (Stablon) or moclobemide (Aurorix) In his typical balanced style, Kramer does not tell you whether you should or shouldn't be on antidepressants. This is a decision for you and your doctor. Antidepressants help a lot of people around the world get their life back and regain the ability to enjoy living again. However, if the decision has been made to stop taking antidepressants, this book contains all the information you will need to succeed, including - - Planning ahead to maximize your chances of success - Lifestyle changes that may be required during and after the process of quitting - How to minimize the nasty effects of 'discontinuation syndrome', where your body takes time to adjust to life without the drug in your system - The correct nutrition to rebuild your brain - Recommended supplements to assist the process - Potential short term medication options to manage the acute phase ??? Kramer doesn't promise it will be a walk in the park. However what he does make clear is that with a little effort and planning, you can regain your drug free life again. A widowed therapist explores grief, loss, and our innate resilience, drawing on neuroscience and personal experience to lead the bereaved through the five stages of healing. After studying to become a therapist and crisis intervention counselor—even doing her master's thesis on the stages of bereavement—Christina Rasmussen thought she understood grief. But it wasn't until losing her husband to cancer in her early 30s that she truly grasped the depths of sorrow and pain that accompany loss. Using the knowledge she gained while wading through her own grief and reading hundreds of neuroscience books, Rasmussen began to look at experiences in a new way. She realized that grief plunges you into a gap between worlds—the world before loss and the world after loss. She also realized how easy it is to become lost in this gap. In *Second Firsts*, Rasmussen walks you through her Life Reentry process to help you break grief's spiral of pain, so you can stop simply surviving and begin to live again. She shows you that loss can actually be a powerful catalyst to creating a life that is in alignment with your true passions and values. The resilience, strength, and determination that have gotten you through this difficult time are the same characteristics that will help you craft your wonderful new life. Her method, which she has used successfully with thousands of clients, is based on the science of neuroplasticity and focuses on consciously releasing pain in ways that both honor suffering and rewire the brain to change your perception of the world and yourself. Using practical exercises and stories drawn from her own life and those of her clients, Rasmussen guides you through five stages of healing that help you open up to new possibilities. From acknowledging your fear, to recognizing where you stand now, to taking active steps toward a new life, Rasmussen helps you move past the pain and shows that it's never too late to step out of the gap and experience life again—as if for the first time. The steps are presented in the chronological order of the months, though any of the meditations can be used out of sequence. No matter where we are in our recovery, these wise, inspiring messages and meditations can help us "step" our way to healthier, more productive lives. The most highly instructive and visually engaging grilling book on the market, from the experts at Weber, with more than 100 all-new recipes and over 800 photos Legal Research Demystified offers a real-world approach to legal research for first-year law students. The book guides students through eight steps to research common law issues and ten steps to research statutory issues. It breaks down the research steps and process into "bite-size" pieces for novice researchers, minimizing the frustration often associated with learning new skills. This text also gives students context, explaining why and when a source or finding tool should be used when researching the law. The process of legal research, of course, is not linear. This book constantly reminds students of the recursive nature of legal research, and it identifies specific situations when they may deviate from the research steps. Through the book's step-by-step approach, students will connect seemingly unrelated tools (e.g., citators and the Key Number System) and understand how to leverage them to answer legal questions. Every chapter includes charts, diagrams, and screen captures to illustrate the research steps and finding methods. Each chapter concludes with a "summary of key points" section that reinforces important concepts from the chapter. This book provides students and professors with multiple assessment tools. Each chapter ends with true-false and multiple-choice questions that test students' understanding of chapter content. These questions are replicated on the book's companion website, Core Knowledge. Students may answer these end-of-chapter questions, as well as more advanced questions, on Core Knowledge and receive immediate feedback, including an explanation of why the answer is correct or incorrect. Professors can generate reports to track students' performance. Based on students' performance, professors will know whether to review a topic in more detail or to move to the next topic. (New books contain an access code to Core Knowledge; students purchasing used books can buy an access code separately.) Core Knowledge offers yet another assessment tool: interactive research exercises. These online exercises walk students through the research steps on Westlaw and Lexis Advance, giving professors the option to "flip" the classroom. Through many screen captures and tips, students can navigate both research platforms outside of class, allowing students and professors to dig deeper into the material during class. Each research exercise simulates a real-world research experience and contains self-grading questions. For example, in one exercise, students research on Westlaw to determine whether the client could recover damages against a neighbor for the emotional distress for the death of the client's dog. To answer the client's question, students must complete the research steps, including finding and reviewing secondary sources on Westlaw, using the Key Number System and KeyCite, and performing keyword searches. Professor support materials include a Teacher's Manual, sample syllabi, and sample research exams.
