Using Electronic Data Interchange (Edi) to Improve the Efficiency of Accounting Transactions

Sep 21 2022 Electronic data interchange (EDI) is an information technology that standardizes the exchange of information between transacting parties. Using data from a major U.S. office furniture manufacturer who adopted EDI primarily to improve the efficiency of accounting transactions, we evaluate whether EDI reduces order processing time (the time from sales order receipt to sales order scheduling) and whether this improvement is greater for more complex orders. Our measure of complexity reflects both the mix of different products the dealer orders as well as features and options the dealer selects for each product in the order. We find that EDI is associated with

faster order processing independent of complexity, and that EDI mitigates most of the negative effects of complexity on processing time. We also find that dealers learn to submit error-free orders to the manufacturer, and that previous errors provide feedback that helps dealers submit more accurate orders. However, we find only incomplete evidence that order complexity impedes learning.

Drought Jul 27 2020 Comprehensive coverage of understanding, prevention, and risk management of extreme drought events, with examples of approaches followed in water-stressed regions This book describes the progress made in our understanding of severe drought and explains how we can deal with—and even avoid—complete devastation brought on by such punishing events. It brings forward advanced knowledge on drought hazard analysis and management, particularly from EU-funded research projects, to assist in the development of the corresponding drought management plans. In addition, this book addresses issues of social vulnerability to drought and science-policy interfaces, which are important elements of drought management. Divided into three sections, this book covers the diagnosis of physical processes, historic drought and the trends in historic drought, and perspectives of future drought. It takes an academic approach to risk evaluation, including characterization of drought episodes, development of indicators of risk in hydrological and agricultural systems, and analysis of the role of socio-economic instruments for risk mitigation. It also discusses the interactions that have resulted in the

complex institutional framework, and highlights the importance of stakeholder involvement and awareness building for successful drought management. In addition, *Drought: Science and Policy* features a collection of case studies that include the description of effective measures taken in the past. Addresses the growing issue of drought preparedness planning, monitoring, and mitigation Teaches methodologies and lessons focused on specific, drought-prone regions so the applications have more significance Provides examples of approaches followed in water-stressed regions (river basin and national scale) with drought analyses at the pan-European scale *Drought: Science and Policy* will be an invaluable reference for researchers and practitioners in the field as well as Masters students taking relevant courses in drought management and natural disaster management.

Cost and Optimization in Government Jun 25 2020 The careful management of costs and operations are two of the most essential elements for successful operation of any organization – public, private, or nonprofit. This book demonstrates that a good grounding in cost basics, especially those related to cost accounting, operations management, and quality control can help all organizations, in particular government, increase efficiency, improve performance, and, in the end, do a better job of running its everyday operation. The book is divided into three parts: Part I offers thorough coverage of cost fundamentals, with an emphasis on basic cost concepts, cost behavior, cost analysis, cost assignment, cost allocation, and cost control. Part II deals with optimization in government. Included in this part are traditional or classical optimization with applications in inventory management and queuing, followed by mathematical programming, network analysis, productivity measurement, and games and decisions. Finally, Part III deals with a special case in cost and optimization that has become important in recent years – quality control. Simple, accessible language and explanations are integrated throughout, and examples have been drawn from government so that readers can easily relate to them. *Cost and Optimization* is required reading for practicing public managers and students of public administration in need of a clear, concise guide to efficient use

of public resources.

ECONOMIC TRANSITION, STRATEGY AND THE EVOLUTION OF MANAGEMENT ACCOUNTING PRACTICES: THE CASE OF INDIA Feb 20 2020

Management Accounting Sep 28 2020

Management Accounting is part of the celebrations to mark CIMA's 90th anniversary in

2009. It looks at the development of cost and management accounting from the founding of the Institute to today. It considers a number of immediate challenges to management accountants and surveys a range of issues and challenges that will likely affect management accounting thought and practice in the future. The authors examine the possibilities for accountants to widen their focus and become more familiar with the enterprise technology determining their organisations' cost structures and with the effects of multiple production in various locations, such as economies or diseconomies of scale. Such change may require the alteration of traditional cost models used by accountants to become more nuanced. The book suggests how this may be accomplished and highlights the need for management accountants to work as part of management teams throughout the organisation as business partners rather than remain grounded in specialist information provision roles. Alnoor Bhimani is Professor of Management Accounting at the London School of Economics. He is also a Certified Management Accountant as well as an author of 15 books and over 100 articles.

Michael Bromwich was CIMA's Professor of Accounting and Financial Management at the London School of Economics and Political Science (1985 to 2006), now Emeritus. He is a Past President of CIMA (1987/88) and currently serves on CIMA's Technical Committee. A unique survey of 90 years of CIMA research analyses the research to determine future challenges for management accounting and business practices. Charts the history of management accountancy and business practice over nearly 100 years.

Responsible Business in a Changing World May 05 2021 This book explores the current state of Corporate Social Responsibility (CSR) from an international perspective, the goal being to share ideas and visions for a sustainable future and to provide useful guidelines for academics, practitioners and policymakers in the context of the 2030 "Agenda for Sustainable Development" released by the United Nations. Research on CSR has evolved considerably over the last three decades. However, there are still many unanswered questions concerning the sustainability of business in an increasingly

changing world, for example: If most companies consider CSR to be valuable to their organizations, why do only 15% of them systematically implement Social Responsibility initiatives? If CSR has been found to be profitable for companies, why are they so reluctant to develop an active, internal CSR policy? Why are there such significant differences in CSR adoption from country to country? Why does it take a huge crisis to make politicians react and regulate certain core CSR issues? This contributed volume answers these questions, presenting a wealth of case studies and new approaches in the process.

Service Business Costing Feb 26 2023 Service firms have high overhead costs which are difficult to assign to individual services. To bring transparency to their value chain, they need costing approaches that help them find their own improvements. Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (SBC) approach. This hybrid-costing model has a hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.
