Presented in Special Operations Press' distinctive ERDL camouflage cover, denoting a Vietnam-era publication, this edition is an easy-to-read 6 x 9 inch perfect-bound paperback printed on first quality paper in the USA. But we add a twist, and give them the tools to prepare and surprise the enemy with that violence of action that only a Ghost Unit can take to the battlefield of tomorrow!" - Jean-Marc Geffroy, Creative Director - Ubisoft Haynes manuals are written specifically for the do-it-yourselfer, yet are complete enough to be used by professional mechanics. Over 5,300 total pages MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air-Ground Task Force, reconnaissance teams

provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace, while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include, but are not limited to: Plan, coordinate, and conduct amphibious-ground reconnaissance and surveillance to observe, identify, and report enemy activity, and collect other information of military significance. Conduct specialized surveying to include: underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites, and mechanized reconnaissance missions. When properly task organized with other forces, equipment or

personnel, assist in specialized engineer, radio, and other special reconnaissance missions. Infiltrate mission areas by necessary means to include: surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air-delivery, and re-supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision-guided munitions. Conduct post-strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. Tactics, Techniques, and Procedures for

Operations Urban Attacks The purpose of this
manual is to provide a compendium of
techniques and procedures used by
reconnaissance teams (RTs). The success of any
recon operation depends on the ability of the
unit to develop its own procedures and to adapt
and exploit those which prove successful.
Ultimately, success depends on the motivation
and training of the RT. This manual will provide
an introduction to the required training and a
basis for continuation of training. While no

technique represents the final answer, those
described here have been proven successful in
several years of Recondo-style operations. To the
beginner, this manual will serve as a summary of
the techniques he must master; to the "old
timer," it will be a refresher and review. There is
only one type of recon man that has stopped
learning recon - the dead type. This manual is
directed only towards RT employment.
Therefore, always keep in mind that the tactics
and techniques described are directed towards
one goal - the collection of intelligence. The
patrolling tactics, insertion techniques,
communications, etc. are only a means to
accomplish that end. Developed for use at
Recondo (Recon Commando) schools by the US
Army Institute for Military Assistance in 1970 as
a means to capture the operational knowledge of
Studies and Observation Group Recon Teams
from Command & Control North, Central and
South. It contains information very difficult to
find elsewhere, much of it presented in the form

of "lessons learned" from operations in Vietnam. Presented in Special Operations Press' distinctive ERDL camouflage cover, denoting a Vietnam-era publication, this edition is an easy-to-read 6 x 9 inch perfect-bound paperback printed on first quality paper in the USA. Open source intelligence (OSINT) and web reconnaissance are rich topics for infosec professionals looking for the best ways to sift through the abundance of information widely available online. In many cases, the first stage of any security assessment—that is, reconnaissance—is not given enough attention by security professionals, hackers, and penetration testers. Often, the information openly present is as critical as the confidential data. Hacking Web Intelligence shows you how to dig into the Web and uncover the information many don't even know exists. The book takes a holistic approach that is not only about using tools to find information online but also how to link all the information and transform it into

presentable and actionable intelligence. You will also learn how to secure your information online to prevent it being discovered by these reconnaissance methods. Hacking Web Intelligence is an in-depth technical reference covering the methods and techniques you need to unearth open source information from the Internet and utilize it for the purpose of targeted attack during a security assessment. This book will introduce you to many new and leading-edge reconnaissance, information gathering, and open source intelligence methods and techniques, including metadata extraction tools, advanced search engines, advanced browsers, power searching methods, online anonymity tools such as TOR and i2p, OSINT tools such as Maltego, Shodan, Creepy, SearchDiggity, Recon-ng, Social Network Analysis (SNA), Darkweb/Deepweb, data visualization, and much more. Provides a holistic approach to OSINT and Web recon, showing you how to fit all the data together into actionable intelligence Focuses on

hands-on tools such as TOR, i2p, Maltego, Shodan, Creepy, SearchDiggity, Recon-ng, FOCA, EXIF, Metagoofil, MAT, and many more Covers key technical topics such as metadata searching, advanced browsers and power searching, online anonymity, Darkweb / Deepweb, Social Network Analysis (SNA), and how to manage, analyze, and visualize the data you gather Includes hands-on technical examples and case studies, as well as a Python chapter that shows you how to create your own information-gathering tools and modify existing APIs Capitalizes on the ripeness of the German case for interdisciplinary investigation
