All forensic services, including expert witness testimonies, are rendered free of cost; however, the following limitations apply: No examination will be conducted on evidence that has been previously subjected to the same type of examination. Exceptions may be granted when there are reasons for a reexamination. These reasons should be explained in separate letters from the director of the laboratory that conducted the original examination, the prosecuting attorney, and the investigating agency. No request for an examination will be accepted from laboratories having the capability of conducting the examination. Exceptions may be granted upon approval of the FBI Laboratory Director or a designee. No testimony will be furnished if testimony on the same subject and in the same case is provided for the prosecution by another expert. No request for an examination will be accepted from a nonfederal law enforcement agency in civil matters. In addition, when submitting evidence to the FBI Laboratory, contributors acknowledge the following: FBI examiners will choose appropriate technical processes to address the contributor's request for examination. Depending on the caseload of the Laboratory and the needs of the contributor, evidence examinations may be subcontracted. An FBI Laboratory Report of Examination may contain the opinions and/or interpretations of the examiner(s) who issued the report.~

The Routledge International Handbook of Forensic Intelligence and Criminology Jul 12 2021 Despite a shared focus on crime and its 'extended family', forensic scientists and criminologists tend to work in isolation rather than sharing the data, methods and knowledge that will broaden the understanding of the criminal phenomenon and its related subjects. Bringing together perspectives from international experts, this book explores the intersection between criminology and forensic science and considers how knowledge from both fields can contribute to a better understanding of crime and offer new directions in theory and methodology. This handbook is divided into three parts: Part I explores the epistemological and historical components of criminology and forensic science, focusing on their scientific and social origins. Part II considers how collaboration between these disciplines can bring about a better understanding of the organizations and institutions that react to crime, including the court, intelligence, prevention, crime scene investigation and policing. Part III discusses the phenomena and actors that produce crime, including a reflection on the methodological issues, challenges and rewards regarding the sharing of these two disciplines. The objective of this handbook is to stimulate a 'new' interdisciplinary take on the study of crime, to show how both forensic and criminological theories and knowledge can be combined to analyse crime problems and to open new methodological perspectives. It will be essential reading for students and researchers engaged with forensic science, criminology, criminal behaviour, criminal investigation, crime analysis and criminal justice.
