Successful Enquiry Answering Every Time, 7th edition Feb 29 2020 Successful Enquiry Answering Every Time is designed to guide information professionals

through all the stages of research, from finding out what the enquirer really wants, to providing a polished, value-added answer. When people want to satisfy their immediate curiosity they're much more likely to use a search engine on their mobile device than ask their local library. But while the days of personal intervention in this kind of enquiry are inevitably numbered, the professional skills that underpin them are not. This book uses technology as the enabler of the thought processes that information professionals need to engage in when answering enquiries, and makes the case that new technology, far from making them irrelevant, raises the skill stakes for all. Now in its 7th edition, this book is fully updated to cover new skills, such as: employing critical thinking to manipulate, categorise and prioritise raw search results using strategic reading and abstracting techniques to identify and summarise the essential information the enquirer needs from the retrieved documents drawing on established story-telling practice to present research results effectively – whether orally or in writing working to the POWER model: plan, organise, write, edit, review. This book is ideal for anyone who has to answer enquiries from users in any information role; those working in contact centres who are dealing with information enquiries, processing transactions or trouble-shooting technical issues; and information professionals working on enquiry desks in large or small academic, public, school or special libraries.

Nuclear Energy Mar 12 2021 This expanded, revised, and updated fourth edition of *Nuclear Energy* maintains the tradition of providing clear and comprehensive coverage of all aspects of the subject, with emphasis on the explanation of trends and developments. As in earlier editions, the book is divided into three parts that achieve a natural flow of ideas: *Basic Concepts*, including the fundamentals of energy, particle interactions, fission, and fusion; *Nuclear Systems*, including accelerators, isotope separators, detectors, and nuclear reactors; and *Nuclear Energy and Man*, covering the many applications of radionuclides, radiation, and reactors, along with a discussion of wastes and weapons. A minimum of mathematical background is required, but there is ample opportunity to learn characteristic numbers through the illustrative calculations and the exercises. An updated *Solution Manual* is available to the instructor. A new feature to aid the student is a set of some 50 *Computer Exercises*, using a diskette of personal computer programs in BASIC and spreadsheet, supplied by the author at a nominal cost. The book is of principal value as an introduction to nuclear science and technology for early college students, but can be of benefit to science teachers and lecturers, nuclear utility trainees and engineers in other fields.
