This volume offers theoretically informed surveys of topics that have figured prominently in morphosyntactic and syntactic research into Romance languages and dialects. We define syntax as being the linguistic component that assembles linguistic units, such as roots or functional morphemes, into grammatical sentences, and morphosyntax as being an umbrella term for all morphological relations between these linguistic units, which either trigger morphological marking (e.g. explicit case morphemes) or are related to ordering issues (e.g. subjects precede finite verbs whenever there is number agreement between them). All 24 chapters adopt a comparative perspective on these two fields of research, highlighting cross-linguistic grammatical similarities and differences within the Romance language family. In addition, many chapters address issues related to variation observable within individual Romance languages, and grammatical change from Latin to Romance. This monograph is one of the first studies that approaches Latin syntax from a formal perspective, combining detailed corpus-based description with formal theoretical analysis. The empirical focus is word order in embedded clauses, with special attention to clauses in which one or more constituents surface to the left of a subordinating conjunction. It is proposed that two such types of left peripheral fronting should be distinguished. The proposed analyses shed light not only on the clausal left periphery, but also on the overall structure of the Latin clause. The study is couched in the framework of generative grammar, but since a thorough introduction is provided, no special background in formal syntax is required. Major topics touched upon are word order, information structure, locality, and the syntax of pied-piping. The book covers both synchronic and diachronic topics of Latin syntax, and is of interest for classical philologists, historical linguists, and formal syntacticians. OGGI IN ITALIA is an introductory Italian program featuring a balanced four-skills approach to language learning. OGGI includes various perspectives of Italian culture, ranging from its rich, historical legacy, to current changes affecting the country and culture. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Includes sixteen contributions which are representative of the research carried out in Italy on Italian and, more generally, Romance syntax. The essays in this work are collected to pay homage to Professor Lorenzo Renzi, a scholar who has since the 1960s promoted and shaped the study of Italian syntax in Italy. Mapping the Left Periphery, the fifth volume in "The Cartography of Syntactic Structures," is entirely devoted to the functional articulation of the so-called complementizer system, the highest part of sentence structure. The papers collected here identify, on the basis of substantial empirical evidence, new atoms of functional structure, which encode specific features that are typically expressed in the left periphery. The volume also submits the richly articulated CP structure to further crosslinguistic checking. The research presented here has led to the identification of new, important restrictions in the relative sequence of elements appearing in the left periphery. With contributions from African languages, Chinese, Hungarian, Romance languages, and Italian dialects, Mapping the Left Periphery will be of interest to syntacticians working on comparative syntax, and more specifically on Romance grammar. This book proposes a theory of the distribution of adverbial adjuncts in a Principles and Parameters framework, claiming that there are few syntactic principles specific to adverbials; rather, for the most part, adverbials adjoin freely to any projection. Adjuncts' possible hierarchical positions are determined by whether they can receive a proper interpretation, according to their selectional (including scope) requirements and general compositional rules, while linear order is determined by hierarchical position along with a system of directionality principles and morphological weight, both of which apply generally to adjuncts and all other syntactic elements. A wide range of adverbial types is analysed; predicational adverbs (such as manner, and modal adverbs), domain expressions like financially, temporal, frequency, duration and focusing adverbials; participant PPs (e.g. locatives and benefactives); resultative and conditional clauses, and others, taken primarily from English, Chinese, French and Italian, with occasional reference to others (such as German and Japanese). \*\*\* Pre-Order The Wiley Blackwell Companion to Syntax, second edition, publishing December 2017. Trick your brain into accepting Italian words as "English". We pretend that Italian words are actually newly-coined English words. It's technique is called "Diglot Weave". One University in Iran experimented with the method on some high schoolers learning English. Half the kids learned using standard methods, and the other half used the Diglot Weave method. Afterwards, they all sat a test. What were the results? The kids taught the usual way scored 12 out of 25, but the kids taught with the Diglot Weave method scored nearly double - 23 out of 25! Want to try it? This book includes over 100 Italian adjectives (describing words). We mix them into fully English article on 50 different interesting topics. By the end of the book, your brain should be tricked into thinking that these words are "English".

Reformulation and Acquisition of Linguistic Complexity proposes a new answer to the question of the appropriation or acquisition of a mother tongue - a complex object, one that is both stable and perpetually evolving. This answer is based on the reformulating principle that children spontaneously apply; a principle that is illustrated here with children retelling the same story. These children are all 6, 8 or 10 years old and speak French, Italian, Croatian or Polish as a first language. This book demonstrates that the acquisition of any mother tongue is explained by the application of various reformulation procedures between source predications and reformulated predications. These procedures are comparable from one language to another, and different from one age group to another. This book also studies certain complex phenomena at the lexical and syntactical levels, and analyzes how children, depending on their age, treat these phenomena. Finally, we show that the acquisition of a mother tongue is a fundamentally linguistic activity. The goal of this book is twofold. On the one hand we want to offer a discussion of some of the more important properties of the nominal projection, on the other hand we want to provide the reader with tools for syntactic analysis which apply to the structure of DP but which are also relevant for other domains of syntax. In order to achieve this dual goal we will discuss phenomena which are related to the nominal projection in relation to other syntactic phenomena (e.g. pro drop will be related to N-ellipsis, the classification of pronouns will be applied to the syntax of possessive pronouns, N-movement will be compared to V-movement, the syntax of the genitive construction will be related to that of predicate inversion etc.). In the various chapters we will show how recent theoretical proposals (distributed morphology, anti-symmetry, checking theory) can cast light on aspects of the syntax of the NP. When necessary, we will provide a brief introduction of these theoretical proposals. We will also indicate problems with these analyses, whether they be inherent to the theories as such (e.g. what is the trigger for movement in antisymmetric approaches) or to the particular instantiations. The book cannot and will not provide the definitive analysis of the syntax of noun phrases. We consider that this would not be possible, given the current flux in generative syntax, with many new theoretical proposals being developed and explored, but the book aims at giving the reader the tools with which to conduct research and to evaluate proposals in the literature. In the discussion of various issues, we will apply the framework that is most adequate to deal with problems at hand. We will therefore not necessarily use the same approach throughout the discussion. Though proposals in the literature will be referred to when relevant, we cannot attempt to provide a critical survey of the literature. We feel that such a survey would be guided too strongly by theoretical choices, which would not be compatible with the pedagogical purposes this book has. The book is comparative in its approach, and data from different languages will be examined, including English, German, Dutch (West-Flemish), Greek, Romance, Semitic, Slavic, Albanian, Hungarian, Gungbe.
