This book shows how the institutional framework of a society emerges and how markets within institutions work. This title begins its description of how we created a financially-intergrated world by first examining the history of financial globalization, from Roman practices and Ottoman finance to Chinese standards, the beginnings of corporate practices, and the advent of efforts to safeguard financial stability. **Financial Markets and Institutions, 5e** offers a unique analysis of the risks faced by investors and savers interacting through financial institutions and financial markets, as well as strategies that can be adopted for controlling and managing risks. Special emphasis is put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services. Today, with the financial sector experiencing an unprecedented boom due to a variety of factors such as liberalisation, globalisation and consumer spending, the subject of this book has become more important than ever before. And this book compresses, within the covers of a single volume, the entire gamut of financial markets, institutions and financial services. Divided into three parts— Part I on Financial Markets deals with different Indian and global money markets, and primary and secondary markets. It also covers stock exchanges and their trade mechanism, foreign exchanges, as well as capital markets and their regulations; Part II, Financial Institutions covers diverse banking and non-banking institutions and their legislation; Part III, Financial Services

discusses about the financial services which include mutual funds, lease financing, securitisation, and credit and debit cards.

KEY FEATURES : A unique attempt to comprehensively analyse, within a single volume, the working of the three pillars of the financial system—financial markets, financial institutions, and financial services. Gives updated and latest financial data and related information on the subject. Provides tables and diagrams to illustrate the concepts, and questions (short answer and long answer/essay type) to test the comprehension skills of the students. In addition, it will be a ready reference for Chartered Accountants and all those who would like to acquaint themselves with Indian banking and capital market. This book seeks to explain the global financial crisis and its wider economic, political, and social repercussions, arguing that the 2007-9 meltdown was in fact a systemic crisis of the capitalist system. The volume makes these points through the exploration of several key questions: What kind of institutional political economy is appropriate to explain crisis periods and failures of crisis-management? Are different varieties of capitalism more or less crisis-prone, and can the global financial crisis can be attributed to one variety more than others? What is the interaction between the labour market and the financialization process? The book argues that each variety of capitalism has its own specific crisis tendencies, and that the uneven global character of the crisis is related to the current forms of integration of the world market. More specifically, the 2007-09 economic crisis is rooted in the uneven income distribution and inequality caused by the current financial-led model of growth. The book explains how the introduction of more flexibility in the labour markets and financial deregulation affected everything from wages to job security to trade union influence. Uneven income distribution and inequality weakened aggregate demand and brought about structural deficiencies in aggregate demand and supply. It is argued that the process of financialization has profoundly changed how capitalist economies operate. The volume posits that financial globalization has given rise to growing international imbalances, which have allowed two growth models to emerge: a debt-led consumption growth model and an export-led growth model. Both should be understood as reactions to the lack of effective demand due to the polarization of income distribution.
