The golden ratio,  $\phi = (1+\sqrt{5})/2$ , has been a subject of fascination from as far back as 300 BC. It has been treated as a singular and unique number in a category of its own, and has been given such descriptors as divine, precious, and intriguing. However, relatively recently, it has been proposed that  $\phi$  is actually one of many golden ratios (plural!). Like  $\phi$ , these ratios: (i) can be seen in architecture, art, and nature; (ii) can be described geometrically as line segments divided by golden points; (iii) are found in certain polygons, curves, fractals, and 3D objects; (iv) are the positive roots of certain types of polynomial equations; (v) can be expressed as infinite continued fractions and as infinite nested radicals; (vi) have powers that can be written as linear combinations of themselves and constants; and (vii) are the values to which the ratios of successive terms in certain sequences converge and are roots of the characteristic equations of the matrices representing these sequences. If you are willing to consider the shocking idea that  $\phi$  is not all that extraordinary, then this book is for you! You are invited to follow mathematical investigations that will show you that  $\phi$  has many siblings in various families of golden ratios. "First published 1978"--T.p. verso. In this powerfully argued book, Knasas engages a debate at the heart of the revival of Thomistic thought in the twentieth century. Richly detailed and illuminating, his book calls on the tradition established by Gilson, Maritain, and Owen, to build a case for Existential Thomism as a valid metaphysics. Being and Some Twentieth-Century Thomists is a comprehensive discussion of the major issues and controversies in neo-Thomism, including issues of mind, knowledge, the human subject, free will, nature, grace, and the act of being. Knasas also discusses the Transcendental Thomism of Mar chal, Rahner, Lonergan, and others as he builds a carefully articulated case for completing the Thomist revival. With the constitution and by-laws and a list of the officers ; issues for 1880- also include appendices. This book offers a collection of papers presented at the V International Symposium "Biogenic - abiogenic interactions in natural and anthropogenic systems" that was held from 20-22 October 2014 in Saint Petersburg (Russia). Papers in this book cover a wide range of topics connected with interactions between biogenic and abiogenic components in the lithosphere, biosphere and technosphere. The main topics include: biomineralization in geosystems, geochemistry of biogenic-abiogenic systems, biomineral interactions in soil, minerals in living organisms and biomimetic materials, medical geology, bioweathering and destruction of cultural heritage. This book focuses on the materials used for fuel cells, solar panels, and storage devices, such as rechargeable batteries. Fuel cell devices, such as direct methanol fuel cells, direct ethanol fuel cells, direct urea fuel cells, as well as biological fuel cells and the electrolytes, membranes, and catalysts used there are detailed. Separate chapters are devoted to polymer electrode materials and membranes. With regard to solar cells, the

types of solar cells are detailed, such as inorganic-organic hybrid solar cells, solar powered biological fuel cells, heterojunction cells, multi-junction cells, and others. Also, the fabrication methods are described. Further, the electrolytes, membranes, and catalysts used there are detailed. The section that is dealing with rechargeable batteries explains the types of rechargeable devices, such as aluminum-based batteries, zinc batteries, magnesium batteries, and lithium batteries. Materials that are used for cathodes, anodes and electrolytes are detailed. The text focuses on the basic issues and also the literature of the past decade.
