picture. Applications are drawn from all areas of business and economics. This book is a refocused and shortened version of APPLIED STATISTICS FOR BUSINESS AND ECONOMICS 2/e by Webster. This briefer book concentrates on the core topics in business statistics. It is important to retain 2/e Webster users by presenting this 1/e as a "shortened" book. It is also very important to present it as a "new" alternative to the Mason level market, to replace any brief text, e.g. Mason, Levin/Rubin, Mann, Trioloa/Franklin and Anderson/Sweeney/Williams Essentials. This innovative new approach to statistics simplifies concepts for those using them in the business world. The book discusses the basics of statistics starting with an introduction to business research. It explores how and why to apply statistics to business research. The text covers all relevant descriptive statistics, normal curves and standard scores; correlation; regression; and inferential statistics. It also includes a section on validity and reliability. The book ends with a section on using statistics in a research study and testing students' ability to identify when to use each statistical test. In the competitive world of business, effective decision making is crucial. To help you stand out from the crowd, Robert Stine and Dean Foster of the Wharton School of the University of Pennsylvania have written an exciting new book for business statistics. This book teaches you how to use data to make informed decisions; every chapter highlights issues in the

modern business world. The authors provide strong connections between the statistical concepts in the text and the problems you will face in your future careers, showing you how to find patterns, create statistical models from the data, and deliver your findings to an audience. This text integrates various statistical techniques with concepts from business, economics and finance, and demonstrates the power of statistical methods in the real world of business. This edition places more emphasis on finance, economics and accounting concepts with updated sample data. The short course market for management education and training is well-established, yet textbooks catering for the needs of the short-course student have been slow to make an appearance. The Essence of Management series of books aims to provide an introduction to the fundamentals of each aspect of the subject. This new edition utilizes a new approach to statistics: use of the statistics to identify, diagnose, and solve business problems. The text emphasizes time series data, graphics, and communicating statistical results in managerial terms through the use of memos. There are over 1000 business-related problems and questions. Icons will indicate accounting/finance, marketing, POM, general management, or economics problems. BASIC STATISTICS FOR BUSINESS AND ECONOMICS, 4/e contains comprehensive coverage of statistical tools and methods delivered in a student friendly, step-by-step format. The text is non-threatening and

presents concepts clearly and succinctly with a conversational writing style. All statistical concepts are illustrated with solved applied examples immediately upon introduction. Modern computing tools and applications are introduced, but the text maintains a focus on presenting statistics content as oppose to technology or programming methods, this edition continues as a 'students' text with increased emphasis on interpretation of data and results. This essentials version of the more comprehensive text includes 13 chapters (versus 20 chapters in the longer 11/e), in a two-color format, with some condensed coverage and all optional topics or chapters eliminated. It contains the core topics covered in most Business Statistics courses in fewer pages. Summary: "Research Methods and Statistics for Business ... includes 30 research designs and 30 bivariate and multivariate statistical tests, taking students through a step-by-step process to select the appropriate statistical method. The author's approach effectively integrates research and statistics, beginning with research methodology and then guiding students through the process of conducting their own statistical research, from the initial process of selecting the research topic through the finished research paper."--Waveland website, viewed 10th June, 2011.
