Jones & Bartlett Learning's Clinical Medical Assisting
Dec 05 2020 Designed to ensure that every medical assisting
graduate can quickly trade a cap and gown for a set of scrubs,
Clinical Medical Assisting, Fifth Edition is more than just a
textbook - it's an engaging, dynamic suite of learning resources
designed to train medical assisting students in the clinical skills
they'll need in today's rapidly changing health care
environment. The Fifth Edition includes a full chapter on
Emergency Preparedness, new in-book role playing activities,
and an expanded array of online resources. We're pleased to
continue to offer case studies, skills videos, and animations.

Advanced Tribology Feb 04 2021 "Advanced Tribology" is the proceedings of the 5th China International Symposium on Tribology (held every four years) and the 1st International Tribology Symposium of IFToMM, held in Beijing 24th-27th September 2008. It contains seven parts: lubrication; friction and wear; micro/nano-tribology; tribology of coatings, surface and interface; biotribology; tribo-chemistry; industry tribology. The book reflects the recent progress in the fields such as lubrication, friction and wear, coatings, and precision manufacture etc. in the world. The book is intended for researchers, engineers and graduate students in the field of tribology, lubrication, mechanical production and industrial design. The editors Jianbin Luo, Yonggang Meng, Tianmin Shao and Qian Zhao are all the professors at the State Key Lab of Tribology, Tsinghua University, Beijing.

Chemical Resistance of Specialty Thermoplastics Aug 25 2022 While the two-volume work 'Chemical Resistance of Thermoplastics' covers chemical resistance of high-volume commercial (commodity) thermoplastics, this volume focuses on high performance 'engineering' or 'specialty' thermoplastics. These thermoplastics are usually consumed in smaller volumes, but have desirable characteristics for demanding and high-value applications. This book provides extensive data on

chemical resistance tests, and material chemical resistance properties for important specialty thermoplastics including polyarylenes, polymimides and fluoropolymers, polymer alloys and specialty polyethylenes. The chemical resistance data provided enables the reader to make a better material selection decision, avoiding the major economic and business impacts of material failure, and in some cases eliminating the need for screening tests. The data gives detailed information on the parameters of exposure of plastics and their different grades to chemicals and environmental conditions, i.e. chemical compound or solvent, concentration, temperature, the length of time a plastic can withstand such attacks (with, for example, weight change as a key parameter) etc. – answering key questions often arising in the process of product development. This volume comes in an easy-to-use print format – including a list of exposure media enabling cross-referencing to the main material data tables – as well as an online database with an extended data set, and advanced search and navigation features. The single most comprehensive data source covering the chemical resistance properties of thermoplastics A must-have reference for those designing and working in sectors where thermoplastics come into contact with corrosive or reactive substances This new edition includes new chapters that provide the underpinning knowledge needed to fully understand and apply the information in the data sections In the print edition of this book, the data covered in the two volumes are also provided on a CD-ROM (compatible with Windows XP,

Windows Vista and Windows 7 operating systems) offering extended navigation and search features
