Fit & Firm For Ever Jan 08 2021 Stay toned, lean and vibrant through menopause and beyond First the bad news: Between the ages of 45 and 55 women on average can expect to gain at least 5.5 kg. Not only that but we become bigger in places where flab was never a problem before and this unwelcome new arrival stubbornly refuses to budge. The cause? Muscle loss, a slower metabolism, dwindling supplies of oestrogen and a 21st-century lifestyle conspire to produce a midlife midriff crisis. There are genuine health concerns to consider too - bulging waistlines are now linked to a greater risk of insulin resistance, diabetes, heart problems and Alzheimer's disease. And now the good news. Fit & Firm For Ever offers hope and help for those of us lamenting our jelly bellies and bingo wings. It explains that the main strategy for winning the metabolic war is to build and maintain lots of mighty muscle - and that this is easier than you might think.

Acceptable Risk Processes Oct 29 2022 Prepared by the Council on Disaster Reduction and the Technical Council on Lifeline Earthquake Engineering of ASCE. This TCLEE Monograph provides engineers and decision makers with tools to help them better understand acceptable risk processes and then develop risk reduction strategies and implement mitigation actions to reduce lifeline losses from future earthquakes. The disruption of lifelines from natural hazards has a direct impact on the world's regional economies and the health of their citizens. Therefore, it is important to understand what natural hazards are, how they can affect infrastructure lifelines, and what can be done to minimize their impact. These three elements, in turn, influence decisions that involve acceptable risk processes. The topic of "acceptable risk" provides one way of bringing integrated systems risk evaluations for disaster explicitly into a decision-making context. Topics include technical issues; risk criteria issues; and communication, administration, and regulation issues.

The scope of the book has been broadened to take account of the widening and more sophisticated cost management and control service that clients now require. The book examines the factors influencing building costs and how the precontract costs can be estimated, analysed and controlled, to ensure that buildings can be completed within the agreed budget and timescale, and be of acceptable quality, function effectively and provide value for money. A new chapter on value management has been added, together with an introductory chapter on cost modelling; the chapter on life cycling costing is extended, while the sections on energy conservation and occupancy costs are expanded. Throughout the text many new case studies, with supporting tables and diagrams, are included in order to enhance the value of this book to the student and the practitioner.
