Before Raymond Chandler, before Dorothy Sayers or Agatha Christie, there was Metta Fuller Victor, the first American author—man or woman—of a full-length detective novel. This novel, *The Dead Letter*, is presented here along with another of Victor's mysteries, *The Figure Eight*. Both written in the 1860s and published under the name Seeley Regester, these novels show how—by combining conventions of the mystery form first developed by Edgar Allan Poe with those of the domestic novel—Victor pioneered the domestic detective story and paved the way for generations of writers to follow. In *The Dead Letter*, Henry Moreland is killed by a single stab to the back. Against a background of post-Civil War politics, Richard Redfield, a young attorney, helps Burton, a legendary New York City detective, unravel the crime. In *The Figure Eight*, Joe Meredith undertakes a series of adventures and assumes a number of disguises to solve the mystery of the murder of his uncle and regain the lost fortune of his angelic cousin. This groundbreaking addition to Alban's acclaimed *Money, Faith, and Lifestyle Series* creates a mosaic of what is happening - and could happen - in American Jewish and Christian congregations to cultivate in young people a deep and lasting commitment to giving and serving. This highly structured text, in its second edition, provides comprehensive coverage of design techniques of algorithms. It traces the complete development of various algorithms in a stepwise approach followed by their pseudo-codes to build an understanding of their applications in practice. With clear explanations, the textbook intends to be much more comprehensive book on design and analysis of algorithm. Commencing with the introduction, the book gives a detailed account of graphs and data structure. It then elaborately discusses the matrix algorithms, basic algorithms, network algorithms, sorting algorithm, backtracking algorithms and search algorithms. The text also focuses on the heuristics, dynamic programming and meta heuristics. The concepts of cryptography and probabilistic algorithms have been described in detail. Finally, the book brings out the underlying concepts of benchmarking of algorithms, algorithms to schedule processor(s) and complexity of algorithms. New to the second Edition New chapters on • Matrix algorithms • Basic algorithms • Backtracking algorithms • Complexity of algorithms Several new sections including asymptotic notation, amortized analysis, recurrences, balanced trees, skip list, disjoint sets, maximal flow algorithm, parsort, radix sort, selection sort, topological sorting/ordering, median and ordered statistics, Huffman coding algorithm, transportation problem, heuristics for scheduling, etc., have been incorporated into the text. Every day, you make -- or avoid -- decisions. Every day your choices determine who you are. You are what you decide. Reader praise for *You Are What You Decide*: Sherm Bodner, President and Publisher, Gannett Central New York Media: "You Are What You Decide is a concise book that distills complex ideas into a straightforward, highly readable framework. Sean Brady combines personal history, business anecdotes and management theory to create an actionable approach to decision-making that will be

useful to veteran leaders and novice managers alike." Andrew Tait, Chief Technology Officer, Decision Mechanics Limited: "Sean Brady distills twenty years of experience helping people make decisions into the Eight Keys that you need to improve your decision-making. While books like Daniel Kahneman's "Thinking Fast and Slow" bring theoretical ideas to a mass audience, they are still relatively technical and abstract in nature. You Are What You Decide takes a big step towards real-world decision-making showing how anyone can improve their decision-making capability by adopting a few simple behaviors. Highly recommended." John Sipple, Associate Professor, Cornell University: "You Are What You Decide is a great book. While I am typically suspicious of leadership and self help books as a quick diversion and money grab, this is a remarkably insightful and useful book that provides a depth and grounding for your own personal and professional decision-making. Filled with Sean's own insights and experiences, I find the book immensely relevant and poignant without being preachy or condescending. I look forward to reading it a second time." Michelle Bradley, Superintendent, Lockport City School District: "You Are What You Decide presents complex ideas simply in a very engaging, rapid read. While reading the book, I focused on how the Eight Keys could help Lockport City School District's leadership teams advance their work for improving student achievement. We will use this outstanding resource as we continue to perfect our leadership skills and the use of our data driven inquiry cycle at the classroom, building, and district levels." Greg Zlevor, President, Westwood International: "Decision-making is one of - if not the most - critical skills for effective leaders. Knowing how and what to decide is essential in all leadership positions. As a matter of fact, people often become leaders based upon their decision-making skill - it is that important. Thankfully Sean Brady has taken the time to share his abundant wisdom and experience with decision-making in You Are What You Decide. If you are a leader or if you want to lead well, please read about the Eight Keys. You and the people you work with will be glad that you did." A comprehensive study of the clarinet in use through the classical period, 1760 to 1830, a period of intensive musical experimentation. The book provides a detailed review and analysis of construction, design, materials, and makers of clarinets. Rice also explores how clarinet construction and performance practice developed in tandem with the musical styles of the period. Elise and Franklin have always been best friends. Elise has always lived in the big house with her loving Uncle and Aunt, because Elise's parents died when she was too young to remember them. There's always been a barn behind the house with eight locked doors on the second floor. When Elise and Franklin start middle school, things feel all wrong. Bullying. Not fitting in. Franklin suddenly seems babyish. Then, soon after her 12th birthday, Elise receives a mysterious key left for her by her father. A key that unlocks one of the eight doors upstairs in the bar . . . SUNSHINE STATE AWARD FINALIST! This very provocative book takes the reader on a "think-out-of-the-box" journey through the development of a treatment regimen for multiple myeloma called "dtZ". It is a firsthand account of how more than 50 patients with myeloma were given a non-toxic, precisely-targeted, anti-cancer treatment that was specifically adapted to their individual cancers. These Individualized Anti-Cancer Targeted Therapies (smart bombs) have produced amongst the best responses as well as survival rates for myeloma. Accordingly, the author argues that some patients might even have been "cured" of their cancers. The concepts and logic behind "dtZ" are carefully presented in simple language so that both doctors and patients can easily understand them. Numerous tables and figures are provided, together with clear and simple explanations. This book is a valuable resource for all patients with myeloma who want to get the most out of their treatment by individualizing treatment to suit their needs, particularly for patients who have just been diagnosed with myeloma and who are taking that very important first step in their treatment. It is also a useful guide for doctors, nurses and researchers who treat and/or study myeloma. By profiling men and women who have excelled in six various disciplines, the author has defined eight personality traits that readers can emulate to reach the top. With contributions from an international group of authors with diverse backgrounds, this set comprises all fourteen volumes of the proceedings of the 4th AHFE Conference 21-25 July 2012. The set presents the latest research on current issues in Human Factors and Ergonomics. It draws from an international panel that examines cross-cultural differences, design issues, usability, road and rail transportation, aviation, modeling and simulation, and healthcare. Explaining the process and energetics of Daoist internal alchemy, the author describes in detail the practice of Nei Dan, the alchemical firing practice of Daoism that has until very recently been a closely guarded secret. Drawing together a huge amount of esoteric material on the hidden aspects of Daoist practice, he presents theory and practice coherently for Western practitioners. He offers his own experiences of each stage of attainment, describing the tangible results that should appear, and provides guidance on the practicalities and potential pitfalls of alchemical training. This simple and manageable guide to user interface design is written for the professional in industry working on product development and the decision process. It is directed not only to the human factors specialists, but also to technicians, designers, marketing and product managers and students. The book presents guidelines for user interface d Focusing on qualitative descriptions and realistic explanations of relationships between wireless systems and performance parameters, INTRODUCTION TO WIRELESS AND MOBILE SYSTEMS, 4e explains the general principles of how wireless systems work, how mobility is supported, what the underlying infrastructure is and what interactions are needed among different functional components. Rather than offering a thorough history of the development of wireless technologies or an exhaustive list of work being carried out, the authors help computer science, computer engineering, and electrical engineering students learn this exciting technology through relevant examples, such as understanding how a cell phone starts working as soon as they get out of an airplane. This edition offers the most extensive coverage of Ad Hoc and Sensor Networks available for the course and includes up-to-date coverage of the latest wireless technologies. The object of this book is to cover most of the currently relevant areas of data communications and networks. These include: Communications protocols (especially TCP/IP) Networking (especially in Ethernet, Fast Ethernet, FDDI and ATM) Networking operating systems (especially in Windows NT, Novell NetWare and UNIX) Communications programs (especially in serial communications, parallel communications and TCP/IP) Computer hardware (especially in PC hardware, serial communications and parallel communication) The book thus splits into 15 different areas, these are: General data compression (Chapters 2 and 3) Video, images and sound (Chapters 4-11 ) Error coding and encryption (Chapters 12-17) TCP/IP, WWW, Internets and Intranets (Chapters 18-20 and 23) Electronic Mail (Chapter 21 ) HTML (Chapters 25 and 26) Java (Chapters 27-29) Communication Programs (Chapters 20, 29 and 49) Network Operating Systems (Chapters 31-34) LANs/WANs (Chapters 35, 38-46) Serial Communications (Chapters 47 and 48) Parallel Communications (Chapters 50-52) Local Communications (Chapters 53-57) Routing and Protocols (Chapters 36 and 37) Cables and connectors (Chapters 58--60) Many handbooks and reference guides on the market contain endless tables and mathematics, or are dry to read and contain very little insight in their subject area. I have tried to make this book readable, but also contain key information which can be used by professionals. Successful interaction with products, tools, and technologies depends on usable designs, accommodating the needs of potential users and does not require costly training. In this context, *Advances in Usability Evaluation Part I* discusses emerging concepts, theories, and applications of human factors knowledge focusing on the discovery and understanding of human interaction with products and systems for their improvement. The book covers devices and their interfaces, focusing on optimization of user devices and emphasizing visual and haptic feedback. It then discusses user studies, exploring the limits and capabilities of special populations, particularly the elderly, which can influence the design. It also examines the effect of changes in force and kinematics, physiology, cognitive performance, in the design of consumer products, tools and workplaces. Examining a variety of user-centered evaluation approaches, the concluding chapters details methods for developing products that can improve safety and human performance and at same time, the efficiency of the system. It reports on usability evaluations for different kinds of products and technologies, particularly for cellular phones, earphones, earphone controls, mattresses and pillows, package and professional tools, and service systems. The book provides new methods that enhance performance, expand capabilities, and optimize the fit between people and technology. The book focuses on 8051 microcontrollers and prepares the students for system development using the 8051 as well as 68HC11, 80x96 and lately popular ARM family microcontrollers. A key feature is the clear explanation of the use of RTOS, software building blocks, interrupt handling mechanism, timers, IDE and interfacing circuits. Apart from the general architecture of the microcontrollers, it also covers programming, interfacing and system design aspects. Bring an end to emotional eating by getting to the root of the problem. Most books about emotional eating tend to focus on how to strengthen self-restraint or how to identify what triggers it. The former can make the problem worse, while the latter may be different each time it occurs. Both approaches fail to help emotional eaters understand why they feel compelled to do something that they don't want to do in the first place. This understanding is the key to changing this behavior. Howard Farkas, who has more than two decades of professional and teaching experience as a clinical psychologist specializing in emotional eating, explains the underlying motive that drives the behavior: emotional eating is not a passive failure of self-control, but an active impulse to reject the control of dieting. This defiant need "to be bad" usually leaves the person feeling guilty and anxious about their eating, and recommitting to their diet until the cycle repeats, and the compulsive eating recurs. *8 Keys to End Emotional Eating* provides a detailed plan for breaking this pattern. By explaining the root cause that drives the desire to binge, Farkas offers practical skills to help you learn to change your mindset about dieting and end the impulse to binge. His road map for the future will help readers maintain healthy eating habits for years to come. The classic guide to network security—now fully updated!"Bob and Alice are back!" Thompson, Renee Timmers, Mark Jude Tramo, Sandra E. Trehub, Michael W. Weiss, Marcel Zentner *Exploring Musical Spaces* is a comprehensive synthesis of mathematical techniques in music theory, written with the aim of making these techniques accessible to music scholars without extensive prior training in mathematics. The book adopts a visual orientation, introducing from the outset a number of simple geometric models--the first examples of the musical spaces of the book's title--depicting relationships among musical entities of various kinds such as notes, chords, scales, or rhythmic values. These spaces take many forms and become a unifying thread in initiating readers into several areas of active recent scholarship, including transformation theory, neo-Riemannian theory, geometric music theory, diatonic theory, and scale theory. Concepts and techniques from mathematical set theory, graph theory, group theory, geometry, and topology are introduced as needed to address musical questions. Musical examples ranging from Bach to the late twentieth century keep the underlying musical motivations close at hand. The book includes hundreds of figures to aid in visualizing the structure of the spaces, as well as exercises offering readers hands-on practice with a diverse assortment of concepts and techniques. No other book better prepares students for the innovations in Microsoft Office (2010 and 2007) and living in today's digital world like the third edition of *DIGITOOLS! DIGITOOLS* emphasizes computer applications, such as word processing, presentations, spreadsheets, and database while also providing instruction on the proper way to key and format documents using proven instructional methods. Students learn to effectively use the Internet and input technologies, including speech and handwriting recognition.
