Everyone has dreams for their life. What do you do when those dreams are shattered and you find yourself questioning everything you once believed? Molly Huffman didn't want anything special - a house, a husband, and children. It didn't seem like too much to ask. After all, she had been a good person and tried to follow God. Why would God not want to fulfill her desires? But then death came crashing into her life - taking people, relationships, and all of her plans. The fairy-tale life Molly had dreamed of was gone, and she was forced to wrestle with this God she thought she knew. Could she trust a God who would allow such pain? In *The Moon Is Round*, Molly shares her unfathomable story of grief. As you journey with her through her poignantly honest struggle to live with broken dreams, you'll discover how God uses suffering to rebuild foundations, authenticate faith, and create greater joy and peace than you ever thought possible. In 1998, fiery Eleanor "Els" Gordon thought the new century would find her married to her childhood soul mate, rejuvenating her family's Scottish Highlands estate, and finally earning a managing director title at her investment bank. Maybe she'd even have the courage to discover why her estranged mother ran home to Italy thirty years earlier. But when 2000 dawns, Els is mourning her fiancé and her father, and she's unemployed, broke, and sharing an antique plantation house on the Caribbean island of Nevis with the ghost—or "jumbie"—of Jack Griggs, the former owner. Jack's jumbie wangles Els's help in making amends for wrongs committed during his Casanova life, and in exchange he appoints himself Cupid on behalf of a charter captain who's as skittish about vulnerability as Els. Meanwhile, Els lures her mother to Nevis in hopes of unraveling the family secrets—but will the shocking truth set her free, or pull her fragile new happiness apart? A moving and lyrical novel that transports readers from lush tropics to rugged highlands and back again, *The Moon Always Rising* explores how the

power of forgiveness can help even the most damaged person fix whatever is broken. The author of the beloved "The Year of the Dog" returns with a wondrous story of adventure, faith, and friendship--an enchanting fantasy adventure reminiscent of "The Wizard of Oz." Full color. An award-winning graphic novel from Quebec — for fans of Jane, the Fox and Me and A Year Without Mom This moving graphic novel tells the story of the affection between a girl and her grandfather. When the grandfather withdraws in grief after his wife dies, the girl is determined to live life fully herself and enters an extraordinary contest — the result is a sensitive portrayal of pursuing a dream. Grandfather, a man of few words, is devastated when his beloved wife succumbs to cancer, and he sinks into depression. His granddaughter (" Mémère, " as he calls her) has a different response. She decides to enter the Who Will Go to the Moon Contest, and when she actually wins, she hopes that Grandfather will be proud of her. She embarks on the thrilling journey and at first it is wonderful, but just as she is about to reach the moon, her journey takes an unexpected turn. Written by Stéphanie Lapointe and beautifully illustrated by Rogé, this imaginative graphic novel explores intergenerational relationships, love, death, dreams and illusions. A guide to conscious living through the moon and her phases, incorporating wellness rituals, spellwork, and witchcraft for the modern seeker. We all know the moon. We all have a relationship with it. The earliest people obeyed her orbit, timed their months and holidays and celebrations and agriculture to the moon; the echoes of that system are still visible today, though the connection to the moon is often forgotten. Sarah Faith Gottesdiener is the leader of a movement to remind us of that lineage, guiding our rhythms and our sleep, our energy and our emotions, reminding us of our humanity and our magic. In her self-published Many Moons Workbooks and Lunar Journals, as well as her sold-out classes, she has guided over 50,000 readers to a deeper relationship with the moon, and through it, with themselves. This evergreen book will be an informative and comprehensive guide to lunar living, incorporating radical, self-empowering, and magical tools and resources for the beginner and experienced lunar-follower alike. Depending on where we are in our lives, depending on what we are feeling or what is happening around us, the moon allows us a space to invite ritual into our daily lives. The Moon Book will provide a framework on how to utilize the entire lunar cycle holistically, while offering ways for the reader to develop a personal relationship with their own cycles—energetic, personal, and emotional—through the lens of the moon ' s phases. Learn about the Earth and the Moon with this engaging science reader. Their mutual attraction quickly grows into the kind of love that leaves Savannah waiting for John to finish his tour of duty, and John wanting to settle down with the woman who captured his heart. But 9/11 changes everything. John feels it is his duty to re-enlist. And sadly, the long separation finds Savannah falling in love with someone else. "Dear John," the letter read...and with those two words, a heart was broken and two lives were changed forever. Children need to know they are loved forever and always. This beautiful keepsake board book is sure to be a family favorite. When you are apart, it is a comfort to know you share the same moonlight. Simple, lyrical language paired with soft images soothes and reassures. From writer Stacy McAnulty and illustrator Stevie Lewis, *Moon! Earth's Best Friend* is a light-hearted nonfiction picture book about the formation and history of the moon—told from the perspective of the moon itself. Meet Moon! She's more than just a rock—she ' s Earth ' s rock, her best friend she can always count on. Moon never turns her back on her friend (literally: she's always facing Earth with the same side!). These two will stick together forever. With characteristic humor and charm, Stacy McAnulty channels the voice of Moon in this next celestial "autobiography" in the *Our Universe* series. Rich with kid-friendly facts and beautifully brought to life by Stevie Lewis, this is an equally charming and irresistible companion to *Earth! My First 4.54 Billion Years* and *Sun! One in a Billion*. The authors of *Civilization One* return, bringing new evidence about the Moon that will shake up our world. Christopher Knight and Alan Butler realized that the ancient system of geometry they presented in their earlier, breakthrough study works as perfectly for the Moon as it does the Earth. On further investigation, they found a consistent sequence of beautiful integer numbers when looking at every major aspect of the Moon--no such pattern emerges for any other planet or moon in the solar system. In addition, Knight and Butler discovered that the Moon possesses few or no heavy metals and has no core—something that should not be possible. Their persuasive conclusion: if higher life only developed on Earth because the Moon is exactly what it is and where it is, it becomes unreasonable to cling to the idea that the Moon is a natural object. The only question that remains is, who built it? An intimate portrait of the Earth's closest neighbor--the Moon--that explores the history and future of humankind's relationship with it Every generation has looked towards the heavens and wondered at the beauty of the Moon. Fifty years ago, a few Americans became the first to do the reverse--and shared with Earth-bound audiences the view of their own planet hanging in the sky instead. Recently, the connection has been discovered to be even closer: a fragment of

the Earth's surface was found embedded in a rock brought back from the Moon. And astronauts are preparing to return to the surface of the Moon after a half-century hiatus--this time to the dark side. Oliver Morton explores how the ways we have looked at the Moon have shaped our perceptions of the Earth: from the controversies of early astronomers such as van Eyck and Galileo, to the Cold War space race, to the potential use of the Moon as a stepping stone for further space exploration. Advanced technologies, new ambitions, and old dreams mean that men, women, and robots now seem certain to return to the Moon. For some, it is a future on which humankind has turned its back for too long. For others, an adventure yet to begin. Why is the Moon Following Me? is a series of fun, short poems for children to familiarize them with the story of early astronomy. Through the eyes of a curious child, we travel through time and encounter the discoveries of seven great thinkers from antiquity to the end of the Renaissance. Astronomy can be intimidating, even to adults, and this book is also for them, as a way to introduce their kids, and themselves, to some important key concepts. “ This rich volume is a national treasure. ” —Kirkus Reviews (starred review) “ Captivating, informative, and inspiring...Easy to follow and hard to put down. ” —School Library Journal (starred review) The inspiring autobiography of NASA mathematician Katherine Johnson, who helped launch Apollo 11. As a young girl, Katherine Johnson showed an exceptional aptitude for math. In school she quickly skipped ahead several grades and was soon studying complex equations with the support of a professor who saw great promise in her. But ability and opportunity did not always go hand in hand. As an African American and a girl growing up in an era of brutal racism and sexism, Katherine faced daily challenges. Still, she lived her life with her father ’ s words in mind: “ You are no better than anyone else, and nobody else is better than you. ” In the early 1950s, Katherine was thrilled to join the organization that would become NASA. She worked on many of NASA ’ s biggest projects including the Apollo 11 mission that landed the first men on the moon. Katherine Johnson ’ s story was made famous in the bestselling book and Oscar-nominated film Hidden Figures. Now in Reaching for the Moon she tells her own story for the first time, in a lively autobiography that will inspire young readers everywhere. The moon in all its different phases serves as a reminder of constancy and security. For thousands of years, the Moon has been the one thing in the night sky that everyone anywhere on our planet recognises. Trace the story of the Moon around the world and through history, from ancient legends about its creation, to its first sighting through a telescope, right up until the Apollo 11 mission and the first Moon landing in 1969. This gentle, poetic bedtime story about a little girl and the friendly moon is perfect for fans of Ezra Jack Keats and Kevin Henkes After a play date in the city, Addy heads home to the country with her family. And through the long drive, the moon seems to be following them closely—Addy ’ s faithful guardian and friend. The comforting sense that the moon is your own personal companion is universal to childhood, and Ida Pearle has depicted it beautifully through her lyrical text and soft, sleepy cut-paper collage illustrations. This is a book that children will ask to hear every night at bedtime. Travel the world with the moon in this imaginative picture book,

Opening the adoption dialogue at an early age, this picture book is told from a child's perspective and allows the questions in an adopted child's heart to be asked and discussed by creating the foundation for conversations to come. For many, the moon landing was the defining event of the twentieth century. So it seems only fitting that Norman Mailer—the literary provocateur who altered the landscape of American nonfiction—wrote the most wide-ranging, far-seeing chronicle of the Apollo 11 mission. A classic chronicle of America ' s reach for greatness in the midst of the Cold War, *Of a Fire on the Moon* compiles the reportage Mailer published between 1969 and 1970 in *Life* magazine: gripping firsthand dispatches from inside NASA ' s clandestine operations in Houston and Cape Kennedy; technical insights into the magnitude of their awe-inspiring feat; and prescient meditations that place the event in human context as only Mailer could. Praise for *Of a Fire on the Moon* “ The gift of a genius . . . a twentieth-century American epic—a *Moby Dick* of space. ” —New York “ Mailer ' s account of Apollo 11 stands as a stunning image of human energy and purposefulness. . . . It is an act of revelation—the only verbal deed to be worthy of the dream and the reality it celebrates. ” —Saturday Review “ A wild and dazzling book. ” —The New York Times Book Review “ Still the most challenging and stimulating account of [the] mission to appear in print. ” —The Washington Post Praise for Norman Mailer “ [Norman Mailer] loomed over American letters longer and larger than any other writer of his generation. ” —The New York Times “ A writer of the greatest and most reckless talent. ” —The New Yorker “ Mailer is

indispensable, an American treasure. ” —The Washington Post “ A devastatingly alive and original creative mind. ” —Life “ Mailer is fierce, courageous, and reckless and nearly everything he writes has sections of headlong brilliance. ” —The New York Review of Books “ The largest mind and imagination [in modern] American literature . . . Unlike just about every American writer since Henry James, Mailer has managed to grow and become richer in wisdom with each new book. ” —Chicago Tribune “ Mailer is a master of his craft. His language carries you through the story like a leaf on a stream. ” —The Cincinnati Post

The moon has always been the most obvious feature in our night sky. It is our nearest celestial neighbour, orbiting the earth at an average distance of 384,400 kilometers, and is large enough to display significant detail even to the unaided eye. Our moon has drawn observers since the dawn of humankind, and all people have tried to make sense of the puzzles it poses and the questions it raises. The moon provided our ancient ancestors with one of the earliest means of keeping and measuring time, and many early religions had cults that worshipped it. When it eclipses the sun it provides one of the most awe-inspiring views in nature. In *The Moon*, celebrated amateur astronomer Bill Leatherbarrow provides expert insight into the history of our study of this compelling astronomical body. Drawing on his own decades of lunar observation, he describes how and why the observation and study of the moon has evolved, particularly in the age of telescopic study. He also offers an overview of current scientific thinking and developments in lunar science since the advent of the Space Age, even providing practical advice on how to make your own observations of the moon. Extensively illustrated with images of the lunar surface taken both from spacecraft and using amateur equipment, this book is an accessible introduction to complex astrophysical concepts that will give all amateur astronomers and anyone fascinated by this natural satellite something to moon over. Stung by the pioneering space successes of the Soviet Union - in particular, Gagarin being the first man in space, the United States gathered the best of its engineers and set itself the goal of reaching the Moon within a decade. In an expanding 2nd edition of *How Apollo Flew to the Moon*, David Woods tells the exciting story of how the resulting Apollo flights were conducted by following a virtual flight to the Moon and its exploration of the surface. From launch to splashdown, he hitches a ride in the incredible spaceships that took men to another world, exploring each step of the journey and detailing the enormous range of disciplines, techniques, and procedures the Apollo crews had to master. While describing the tremendous technological accomplishment involved, he adds the human dimension by calling on the testimony of the people who were there at the time. He provides a wealth of fascinating and accessible material: the role of the powerful Saturn V, the reasoning behind trajectories, the day-to-day concerns of human and spacecraft health between two worlds, the exploration of the lunar surface and the sheer daring involved in traveling to the Moon and the mid-twentieth century. Given the tremendous success of the original edition of *How Apollo Flew to the Moon*, the second edition will have a new chapter on surface activities, inspired by reader's comment on Amazon.com. There will also be additional detail in the existing chapters to incorporate

all the feedback from the original edition, and will include larger illustrations. The Moon is Following Me is about a cautious little boy who 's desperately trying to convince his family that the moon is following him each night. Like many brilliant scientists, Josh sometimes had trouble remembering things that needed doing in the “ real ” world—like buying groceries, eating regular meals, and talking to people. But he was happy to have his beloved wife, Lauren, remind him with her “ honey do ” lists. He just never realized how much he would need one when she was gone. Being a widower is not something Joshua Park ever expected. Given his solitary job, small circle of friends and family, and the social awkwardness he 's always suffered from, Josh has no idea how to negotiate this new, unwanted phase of life. But Lauren had a plan to keep him moving forward. A plan hidden in the letters she leaves him, giving him a task for every month in the year after her death. A plan that leads Joshua with a loving hand on a journey through grief, anger, and denial. It 's a journey that will take Joshua from his first outing as a widower to buy groceries...to an attempt at a dinner party where his lack of experience hosting creates a comic disaster...to finding a new best friend while weeping in the dressing room of a clothing store. As his grief makes room for new friendships and experiences, Joshua learns Lauren 's most valuable lesson: The path to happiness doesn 't follow a straight line. Funny, sometimes heart-wrenching, and always uplifting, this novel from New York Times bestselling author Kristan Higgins illuminates how life 's greatest joys are often hiding in plain sight.
