When India became independent in 1947 after two centuries of colonial rule, it immediately adopted a firmly democratic political system, with multiple parties, freedom of speech, and extensive political rights. The famines of the British era disappeared, and steady economic growth replaced the economic stagnation of the Raj. The growth of the Indian economy quickened further over the last three decades and became the second fastest among large economies. Despite a recent dip, it is still one of the highest in the world. Maintaining rapid as well as environmentally sustainable growth remains an important and achievable goal for India. In *An Uncertain Glory*, two of India's leading economists argue that the country's main problems lie in the lack of attention paid to the essential needs of the people, especially of the poor, and often of women. There have been major failures both to foster participatory growth and to make good use of the public resources generated by economic growth to enhance people's living conditions. There is also a continued inadequacy of social services such as schooling and medical care as well as of physical services such as safe water, electricity, drainage, transportation, and sanitation. In the long run, even the feasibility of high economic growth is threatened by the underdevelopment of social and physical infrastructure and the neglect of human capabilities, in contrast with

the Asian approach of simultaneous pursuit of economic growth and human development, as pioneered by Japan, South Korea, and China. In a democratic system, which India has great reason to value, addressing these failures requires not only significant policy rethinking by the government, but also a clearer public understanding of the abysmal extent of social and economic deprivations in the country. The deep inequalities in Indian society tend to constrict public discussion, confining it largely to the lives and concerns of the relatively affluent. Drèze and Sen present a powerful analysis of these deprivations and inequalities as well as the possibility of change through democratic practice. This *Applied Engineering: Studies of God's Design in Nature* Teacher Guide contains materials for use with *Made in Heaven*, *Champions of Inventions*, and *Discovery of Design*, which includes:

- The study of biomimicry, where students will discover how the glow of a cat's eyes innovates road reflectors, the naturally sticky inspirations for Velcro® and barbed wire, the moth's eye, and other natural examples are inspiring improvements and new technologies in our lives.

- Experiments to help students more deeply understand scientific principles discussed in the readings, as well as the formation of an invention notebook where students begin laying out ideas for their own inventions!

OVERVIEW: *Applied Engineering* takes students to the very frontiers of scientific discovery where researchers are taking design elements from God's world and creating extraordinary breakthroughs that benefit our health, our quality of life, and even help us work more efficiently. Students also learn about those scientists of faith who laid the foundations for these cutting-edge advances of today!

FEATURES: Each suggested weekly schedule has four easy-to-manage lessons which combine reading and worksheets. Worksheets and quizzes are perforated and three-hole punched - materials are easy to tear out, hand out, grade, and store. As always, you are encouraged to adjust the schedule and materials as you need to in order to best work within your educational program.
