Richard C. Atkinson's eight-year tenure as president of the University of California (1995–2003) reflected the major issues facing California itself: the state's emergence as the world's leading knowledge-based economy and the rapidly expanding size and diversity of its population. As this selection of President Atkinson's speeches and papers reveals, his administration was marked by innovative approaches that deliberately shaped U.C.'s role in this changing California. These writings tell the story of the national controversy over the SAT and Atkinson's successful challenge to the dominance of the seventy-five-year-old college entrance examination. They also highlight other issues with national significance: U.C.'s experiments with race-neutral admissions programs; the challenges facing academic libraries and the University's pioneering activities with the California Digital Library; and the University's involvement in new paradigms of industry-university research. Together, these speeches and papers open a window on an eventful period in the history of the nation's leading public research university and the history of American higher education. The background of this research is related to innovative lightweight construction methods for short-term applications realized with highly recyclable materials produced from renewable resources. Specifically, the possibility of using selected paper-based products for design purposes is examined. The main topic discussed regards the state of the art and future potential of joining techniques for assemblies and structures designed with paper-based products. In this context, the preference on paper-tubes for a variety of designs is examined closely. A collection of case studies for selected joining techniques supported with digital tools, fabrication of prototypes and targeted structural experiments demonstrates possibilities and considerations. This book presents the research process and aims to inspire architects, designers and engineers who are eager to discuss on material innovation and the steps that need to be taken to examine the feasibility of such ideas. In the edited volume *Writing for Professional Development*, Giulia Ortoleva, Mireille Bétrancourt and Stephen Billett explore the relation between writing and professional development. Two main perspectives are considered: learning to write professionally and writing to learn the profession. English abstracts from *Kholodil'naia tekhnika*. Collection includes Skolnikoff's notes and correspondence from the period in which he was a member of the MIT Review Panel on Special Laboratories (Pounds Panel), and his notes on the Commission on MIT Education (Hoffman Commission). Also contains a 1949 term paper written for a course in electrical engineering. The collection documents Smullin's role on the ONR (Office of Naval Research) Advisory Committee on Millimeter Wave Generation and includes correspondence with Charles H. Townes, chairman of the committee; memoranda and reports. Also included is a 1939 term paper written for 6.501, an MIT electrical engineering seminar. Boxes 2 through 17 are unprocessed. Engineering in Perspective provides a unique look into the career of one of Britain's most widely experienced engineers, Professor Tony Ridley. Ridley analyses key moments from his career to identify the real-world skills required for success. Through this, he examines how important it is that a successful engineer has not only traditional engineering skills but also good interpersonal skills coupled with a deep understanding of social, economic and political factors. Ridley's career case-studies include his time as first Director General of the Tyne & Wear Passenger Transport Executive and working on the creation of the Metro; first Managing Director of the Hong Kong Mass Transit Railway; Chairman and Managing Director of London Underground; the development of the Docklands Light Railway; and working through the trauma of the Kings Cross fire. As Professor of Transport Engineering at Imperial College London, Ridley was involved in national and international engineering bodies, including President of the Institution of Civil Engineers. The book contains papers from this time that develop the concept of the 'breadth of engineering'. Highly relevant for engineering students, newly qualified engineers, educators and employers, this book allows examination of successes and failures of important engineering projects from the 20th century, with lessons and insights for the 21st century engineer. Round out your technical engineering abilities with the business know-how you need to succeed Technical competency, the "hard side" of engineering and other technical professions, is necessary but not sufficient for success in business. Young engineers must also develop nontechnical or "soft-side" competencies like communication, marketing, ethics, business accounting, and law and management in order to fully realize their potential in the workplace. This updated edition of Engineering Your Future is the go-to resource on the nontechnical aspects of professional practice for engineering students and young technical professionals alike. The content is explicitly linked to current efforts in the reform of engineering education including ABET's Engineering Criteria 2000, ASCE's Body of Knowledge, and those being undertaken by AAEE, AIChE and ASME. The book treats essential nontechnical topics you'll encounter in your career, like self-management, interpersonal relationships, teamwork, project and total quality management, design, construction, manufacturing, engineering economics, organizational structures, business accounting, and much more. Features new to this revised edition include: A stronger emphasis on management and leadership A focus on personal growth and developing relationships Expanded treatment of project management Coverage of how to develop a quality culture and ways to encourage creative and innovative thinking A discussion of how the results of design, the root of engineering, come to fruition in constructing and manufacturing, the fruit of engineering New information on accounting principles that can be used in your career-long financial planning An in-depth treatment of how engineering students and young practitioners can and should anticipate, participate in, and ultimately effect change If you're a student or young practitioner starting your engineering career, Engineering Your Future is essential reading. Despite the profound technical challenges involved, sustainability is not, at its root, a technical problem, nor will merely technical solutions be sufficient. Instead, deep economic, political, and cultural adjustments will ultimately be required, along with a major, long-term commitment in each sphere to deploy the requisite technical solutions at scale. Nevertheless, technological advances and enablers have a clear role in supporting such change, and information technology (IT) is a natural bridge between technical and social solutions because it can offer improved communication and transparency for fostering the necessary economic, political, and cultural adjustments. Moreover, IT is at the heart of nearly every large-scale socioeconomic system-including systems for finance, manufacturing, and the generation and distribution of energy-and so sustainability-focused changes in those systems are inextricably linked with advances in IT. The focus of Computing Research for Sustainability is "greening through IT," the application of computing to promote sustainability broadly. The aim of this report is twofold: to shine a spotlight on areas where IT innovation and computer science (CS) research can help, and to urge the computing research community to bring its approaches and methodologies to bear on these pressing global challenges. Computing Research for

Sustainability focuses on addressing medium- and long-term challenges in a way that would have significant, measurable impact. The findings and recommended principles of the Committee on Computing Research for Environmental and Societal Sustainability concern four areas: (1) the relevance of IT and CS to sustainability; (2) the value of the CS approach to problem solving, particularly as it pertains to sustainability challenges; (3) key CS research areas; and (4) strategy and pragmatic approaches for CS research on sustainability. A desk manual supplying suggestions for choice of subjects, a step-by-step guide for the systematic gathering and preparation of material, models for footnotes and bibliographical style; and a classified directory to three hundred reference works. The International Conference on Industrial Engineering and Engineering Management is sponsored by the Chinese Industrial Engineering Institution, CMES, which is the only national-level academic society for Industrial Engineering. The conference is held annually as the major event in this arena. Being the largest and the most authoritative international academic conference held in China, it provides an academic platform for experts and entrepreneurs in the areas of international industrial engineering and management to exchange their research findings. Many experts in various fields from China and around the world gather together at the conference to review, exchange, summarize and promote their achievements in the fields of industrial engineering and engineering management. For example, some experts pay special attention to the current state of the application of related techniques in China as well as their future prospects, such as green product design, quality control and management, supply chain and logistics management to address the need for, amongst other things low-carbon, energy-saving and emission-reduction. They also offer opinions on the outlook for the development of related techniques. The proceedings offers impressive methods and concrete applications for experts from colleges and universities, research institutions and enterprises who are engaged in theoretical research into industrial engineering and engineering management and its applications. As all the papers are of great value from both an academic and a practical point of view, they also provide research data for international scholars who are investigating Chinese style enterprises and engineering management.
