*Servitization in Industry* Nov 25 2022 This book summarizes the “interim result” of the servitization activities in manufacturing industries. While the early literature on servitization tended to stress only its advantages, more recently, scholars have also started to refer to the challenges associated with servitization. This book attempts to give a balanced picture of servitization. The book is structured in four parts: Part I introduces the topic by presenting the most recent academic discussion about servitization and uses an empirical analysis to show the degree of servitization across Europe. The results of this analysis are then compared to the discussion in the literature. This comparison highlights the existing discrepancies between the rather euphoric literature and the more skeptical practical experience. The second and third parts attempt to explain these discrepancies by taking as a starting point the assumption that servitization recommendations have to consider the heterogeneity of the manufacturing sector and the capabilities of the provider. Part II presents articles which analyze the specific characteristics of different sectors with their barriers and potentials and presents frameworks for a successful servitization of the core sectors in European manufacturing industries which include, e.g. aeronautics, automotive, ICT, chemical industries, pulp and paper industries and different engineering sectors. Part III focuses on companies’ capabilities which are necessary for successful servitization. These include strategic management, marketing, organization, innovation, engineering, human resources, controlling, quality and networks. All the contributions in parts II and III add up to a detailed picture of servitization for sectors and functions and indicate the practical implications for enterprises in manufacturing industries. The fourth part concludes the book with a chapter summarizing the findings and giving an outlook of servitization in manufacturing industries, its challenges and future developments.

There is no doubt that the advent of immunocytochemical techniques, by enhancing our ability to detect specific cell products or markers, has opened new avenues in the understanding of human diseases, and in our ability to perform better diagnosis in surgical pathology. The rapid development of this field has resulted in thousands of publications in the literature regarding immunocytochemistry in diagnostic pathology. This explosion of knowledge makes necessary publications summarizing what are the main markers available and how they can be used in the diagnosis of tumors. The need of a more organized and structured knowledge was evident during the workshop in Immunocytochemistry of Tumor Diagnosis that took place in the City of Detroit an October 1984. This book is the result of that workshop in which 22 chapters are focusing an the main subject of differential diagnosis of tumors. Jose Russo, M.D. Editor xiii

ACKNOWLEDGEMENTS I wish to thank my many associates at the Michigan Cancer Foundation for their help in the preparation of this manuscript. I give thanks to Dr.
