Tyner-Mullings, is a brief, economical reference work that gives practical advice about the writing tasks and issues that undergraduate students face in their first sociology courses. Along with more traditional topics, it incorporates valuable information about composing emails, writing for online forums, and using technology for information-gathering and note-taking. Used by itself or in combination with other texts, this book will increase the quality of student writing and enhance their knowledge of how sociologists communicate in writing. What does it take to overcome the influences that led to a failed marriage and ensure that next time will be different? The goal is to lay a new and solid foundation for a lifetime of peace and fulfillment, and to help your children feel at home in their new family. Where there are no secrets, and where there is no distrust, you can instead find healing, forgiveness, and hope. This book is a practical, Bible-centered guide on how to successfully move toward a mutually satisfying and secure remarriage. You will find God honored throughout these pages, as Bill Byars has made this a goal for his life and counseling ministry. - Ron Wiebe, MSW, BCD If you are thinking of marrying for the second time, you need

this book! Bill and Lynn led a divorce recovery ministry that helped hundreds of people through the loss and agony of divorce. . . . This book will give you wisdom from years of experience to help you establish a strong lasting second marriage.' - Dr. Mark Platt. Next Chapter Transitions (www.nextchaptertransitions.org). 'The insightful guidance and direction in these pages will help guide anyone considering marriage toward a successful and enduring marriage.' - John W. Dillon. Director (retired) of Billy Graham Schools of Evangelism In 1932, the U.S. Public Health Service recruited 623 African American men from Macon County, Alabama, for a study of "the effects of untreated syphilis in the Negro male." For the next 40 years -- even after the development of penicillin, the cure for syphilis -- these men were denied medical care for this potentially fatal disease. The Tuskegee Syphilis Study was exposed in 1972, and in 1975 the government settled a lawsuit but stopped short of admitting wrongdoing. In 1997, President Bill Clinton welcomed five of the Study survivors to the White House and, on behalf of the nation, officially apologized for an experiment he described as wrongful and racist. In this book, the attorney for the men, Fred D. Gray, describes the background of the Study, the investigation and the lawsuit, the events leading up to the Presidential apology, and the ongoing efforts to see that out of this painful and tragic episode of American history comes lasting good. One of the most original social scientists of the twentieth century, Albert O. Hirschman led an uncommonly dramatic life. After fleeing Nazi Germany as a youth, he fought in the Spanish Civil War, took part in antifascist activities in Italy, and organized an underground rescue operation in Marseille through which more than 2,000 people, including Marc Chagall, Arthur Koestler, and Hannah Arendt, escaped Europe. Hirschman moved across topics, methodologies, and disciplinary boundaries as fluidly as he did among countries and languages. His work is marked by a deep suspicion of all-encompassing theories, valuing instead doubt and a sensitivity to contingencies and unexpected consequences. In this intellectual biography, the economic historian Michele Alacevich explores the development and trajectory of Hirschman's characteristic approach to social-scientific questions. He traces the many strands of Hirschman's thought and their place in his multifaceted body of work, considering their limitations as well as their strengths. Alacevich puts Hirschman's ideas into context, following his participation in the major intellectual and political debates of his times. He examines Hirschman's pioneering work in development studies and his analyses of social change, the history of capitalism, and the workings of democracy alongside his activities in the postwar reconstruction of Europe and economic development in Latin America. A compelling intellectual portrait of a profoundly distinctive thinker, this book also reflects on Hirschman's legacy and lasting influence. A physician's "provocative" (Boston Globe) and "timely" (Ibram X. Kendi, New York Times Book Review) account of how right-wing backlash policies have deadly consequences -- even for the white voters they promise to help. In election after election, conservative white Americans have embraced politicians who pledge to make their lives great again. But as physician Jonathan M. Metzler examines in *Dying of Whiteness*, the policies that result actually place white Americans at ever-greater risk of sickness and death. Interviewing a range of everyday Americans, Metzler examines how racial resentment has fueled pro-gun laws in Missouri, resistance to the Affordable Care Act in Tennessee, and cuts to schools and social services in Kansas. He shows these policies' costs: increasing deaths by gun suicide, falling life expectancies, and rising dropout rates. Now updated with a new afterword, *Dying of Whiteness* demonstrates how much white America would benefit by emphasizing cooperation rather than chasing false promises of supremacy. Winner of the Robert F. Kennedy Book Award Foot and mouth disease and BSE have both had a devastating impact on rural society. Alongside these devastating developments, the rise of the organic food movement has helped to revitalize an already politicized rural population. From fox-hunting to farming, the vigour with which rural activities and living are defended overturns received notions of a sleepy and complacent countryside. Over the years "rural life" has been defined, redefined and eventually fallen out of fashion as a sociological concept--in contrast to urban studies, which has flourished. This much-needed reappraisal calls for its reinterpretation in light of the profound changes affecting the countryside. First providing an overview of rural sociology, Hillyard goes on to offer contemporary case studies that clearly demonstrate the need for a reinvigorated rural sociology. Tackling a range of contentious issues--from fox-hunting to organic farming--this book offers a new model for rural sociology and reassesses its role in contemporary society. This textbook provides a survey of sociology. As the scientific study of society, sociology is a social science which uses various methods of empirical investigation and critical analysis to develop a body of knowledge about human social activity. It focuses on the influence of our relationships around us and how they affect our behaviors and attitudes. The author approaches this subject with a desire to help students find and use sociology in everyday life. This Fourth Edition of George Ritzer's *Introduction to Sociology* shows students the relevance of sociology to their lives. While providing a rock-solid foundation, Ritzer illuminates traditional sociological concepts and theories, as well as some of the most compelling contemporary social phenomena: globalization, consumer culture, the digital world, and the "McDonaldization" of society. With examples on every page from current events and contemporary research, and stories about "public" sociologists who are engaging with the critical issues of today, the text demonstrates the power of sociology to explain the world, and the diversity of questions that sociologists seek to answer. New to this Edition New "Trending" boxes focus on influential books written by sociologists that have become part of the public conversation about important issues. Replacing "Public Sociology" boxes, these boxes demonstrate the diversity of sociology's practitioners, methods, and subject matter, and feature such authors as: Michelle Alexander (*The New Jim Crow*) Elizabeth Armstrong and Laura Hamilton (*Paying for the Party*) Randol Contreras (*The Stick-Up Kids*) Matthew Desmond (*Evicted*) Kimberly Hoang (*Dealing in Desire*) Arlie Hochschild (*Strangers in Their Own Land*) Eric Klinenberg (*Going Solo*) C.J. Pascoe (*Dude, You're a Fag*) Lori Peek and Alice Fothergill (*Children of Katrina*) Allison Pugh (*The Tumbleweed Society*) Updated examples in the text and "Digital Living" boxes keep pace with changes in digital technology and online practices, including Uber, bitcoin, net neutrality, digital privacy, WikiLeaks, and cyberactivism. New or updated subjects apply sociological thinking to the latest issues including: the 2016 U.S. election Brexit the global growth of ISIS climate change President Trump's proposed Mexican border wall further segmentation of wealthy Americans in the "super rich" transgender people in the U.S. armed forces charter schools the legalization of marijuana the Flint water crisis fourth-wave feminism In contemporary Manila, slums and squatter settlements are peppered throughout the city, often pushing right up against the walled enclaves of the privileged, creating the complex geopolitical pattern of Marco Z. Garrido's "patchwork city." Garrido documents the fragmentation of Manila into a mélange of spaces defined by class, particularly slums and upper- and middle-class enclaves. He then looks beyond urban fragmentation to delineate its effects on class relations and politics, arguing that the proliferation of these slums and enclaves and their subsequent proximity have intensified class relations. For enclave residents, the proximity of slums is a source of insecurity, compelling them to impose spatial boundaries on slum residents. For slum residents, the regular imposition of these boundaries creates a pervasive sense of discrimination. Class boundaries then sharpen along the housing divide, and the urban poor and middle class emerge not as labor and capital but as squatters and "villagers," Manila's name for subdivision residents. Garrido further examines the politicization of this divide with the case of the populist president Joseph Estrada, finding the two sides drawn into contention over not just the right to the city, but the nature of democracy itself. The Patchwork City illuminates how segregation, class relations, and democracy are all intensely connected. It makes clear, ultimately, that class as a social structure is as indispensable to the study of Manila—and of many other cities of the Global South—as race is to the study of American cities. Openings: the urban question as a scale question? -- Between fixity and motion: scaling the urban fabric -- Restructuring, rescaling and the urban question -- Global city formation and the rescaling of urbanization -- Cities and the political geographies of the "new" economy -- Competitive city-regionalism and the politics of scale -- Urban growth machines : but at what scale? -- A thousand layers: geographies of uneven development -- Planetary urbanization: mutations of the urban question -- Afterword: new spaces of urbanization This cutting-edge, applied book highlights the relevance of sociology by including a diverse collection of theories, research, and lived experiences that accurately mirror the diversity in society itself. The author's vivid, applied, personal writing style engages students, and activates compelling everyday examples that make sociology particularly relevant to today's diverse students. SOCIOLOGY IN OUR TIMES is noted for its especially strong integration of engaging Lived Experiences - extended examples that focus on various issues to illustrate chapter coverage. These extended examples are introduced with the vignette that opens each chapter and are then carried throughout the chapter in various boxes, features, and exercises. Kendall's text is acclaimed in the field for being the first textbook to integrate race, class, and gender issues, and for its thorough presentation of sociological theory, which includes diverse theoretical viewpoints such as feminist and postmodernist theory. Kendall shows students that sociology involves important questions and issues that they confront both personally and vicariously. Emerging relatively unscathed from the banking crisis of 2008, China has been viewed as a model of both rampant success and fiscal stability. But beneath the surface lies a network of fissures that look likely to erupt into the next big financial crash. A bloated real-estate sector, roller-coaster stock market, and rapidly growing shadow-banking sector have all coalesced to create a perfect storm: one that is in danger of taking the rest of the world's economy with it. Walden Bello traces our recent history of financial crises – from the bursting of Japan's 'bubble economy' in 1990 to Wall Street in 2008 – taking in their political and human ramifications such as rising inequality and environmental degradation. He not only predicts that China might be the site of the next crash, but that under neoliberalism this will simply keep happening. The only way that we can stop this cycle, Bello argues, is through a fundamental change in

the ways that we organise: a shift to cooperative enterprise, respectful of the environment, and which fractures the twin legacies of imperialism and capitalism. Insightful, erudite and passionate, Paper Dragons is a must-read for anyone wishing to prevent the next financial meltdown. As e-learning has evolved into a global change agent in higher education, it has become more diverse in its form and applications. Now that many institutions have implemented e-learning programs as part of their course offerings, it is essential for these institutions to fully grasp how best to facilitate continued improvements and accessibility in online education. The Handbook of Research on Building, Growing, and Sustaining Quality E-Learning Programs highlights several significant elements of e-learning, including program planning, quality standards, and online course development, as well as institutional, student, and faculty support. Serving as a critical resource for online and hybrid learning programs, this publication is designed for use by administrators, educators, instructional designers, and doctorate-level students in the field of education. The Eighth edition of David Newman's Sociology: Exploring the Architecture of Everyday Life once again invites students into the world of sociological thought. Sociology encourages students to think less about the next test and more about how the subject applies to their everyday lives. In addition to updated coverage and fresh examples, this edition features revamped Micro-Macro Connections that have been even further honed to help students understand the link between individual lives and the structure of society. The most relevant textbook for today's students. Acclaimed on first publication and today considered one of the defining works of the sociology, The Presentation of the Self in Everyday Life is Erving Goffman's extraordinary analysis of the structure of our social interactions. Blurring the line between workaday life and theatrical performance, Goffman argues that our behaviour with others is defined by how we wish to be perceived - resulting in displays bearing a startling similarity to those of an actor on the stage. From the houses and clothes that we use as 'fixed props' to the 'backstage' of the solitude in which our personas are rehearsed and relaxed, Goffman's insight reveals human character to be not fixed or stable, but liquid and consciously maintained. If sociology could teach everyone just one thing, what would it be? What insight about the nature of social life could serve as a gateway to questions that point toward everything we want to know? What could we use as a starting point, a core view of reality on which sociological practice of all kinds is based, consciously or not? The Forest and the Trees is one sociologist's response to the hypothetical -- the core insight with the greatest potential to change how people see the world and themselves in it. It is about what that insight is and why it matters that we understand it, use it, and pass it on. It is about the future of a discipline whose influence and credibility will stand or fall on the ability to foster a clear and widespread understanding of what it means to think sociologically. The Forest and the Trees is an account of how sociological practice finds its way into almost every aspect of life, from headlines in the morning paper to the experiences of growing older to the ravages of social oppression. It is about things small and things large, things simple and things more complex than we can imagine. The Forest and the Trees flows from the tradition of Peter Berger's Invitation to Sociology and C. Wright Mills' Sociological Imagination. It will engage students and teachers alike with a rare and powerful combination of a scholar's feel for the discipline, and a gifted writer's voice that moves and inspires with the immediacy of lived experience, a clear and accessible articulation of the tools of the trade, and a passionate commitment to the promise of sociology to revolutionize how people think about social life and participate in it. The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. What key social forces construct and transform our lives as individuals and as members of society? How does our social world shape us? How do we shape our world? Discover Sociology presents sociology as a discipline of curious minds. The authors inspire curiosity about the social world and empower students by providing the theoretical, conceptual, and empirical tools they need to understand, analyze, and even change the world in which they live. Organized around four main themes—The Sociological Imagination, Power and Inequality, Technological Transformations of Society, and Globalization—the book illuminates the social roots of diverse phenomena and institutions, ranging from poverty and deviance to capitalism and the nuclear family. "Behind the Numbers" features illustrate the practical side of sociology and shows students how to be critical consumers of social science data reported in the media. And every chapter addresses the question, "What can I do with a sociology degree?" by linking the knowledge and skills acquired through studying sociology with specific jobs and career paths. How to Observe: Large Print By Harriet Martineau All travellers do and must generalize too rapidly. Most, if not all, take a fact for a principle, or the exception for the rule, more or less; and the quickest minds, which love to reason and explain more than to observe with patience, go most astray. My faith in travels received a mortal wound when I travelled. I read, as I went along, the books of those who had preceded me, and found that we did not see with the same eyes. Even descriptions of nature proved false. The traveller had viewed the prospect at a different season, or in a different light, and substituted the transient for the fixed. Still I think travels useful. Different accounts give means of approximation to truth; and by-and-by what is fixed and essential in a people will be brought out." Three basic premises guide this highly successful introductory text - first that theory and research must be both comprehensive and clear, second that the text must show how sociology is relevant both to the study of society and to students' lives, and third that sociology can play a valuable role in teaching critical thinking skills. To that end, this solid, well-respected text combines a balanced three-perspective approach with excellent student-oriented examples, and distinctive social policy sections in a concise presentation that offers an alternative to full-length

books. This captivating ethnography explores Vietnam's sex industry as the country ascends the global and regional stage. Over the course of five years, author Kimberly Kay Hoang worked at four exclusive Saigon hostess bars catering to diverse clientele: wealthy local Vietnamese and Asian businessmen, Viet Kieu (ethnic Vietnamese living abroad), Western businessmen, and Western budget-tourists. *Dealing in Desire* takes an in-depth and often personal look at both the sex workers and their clients to show how Vietnamese high finance and benevolent giving are connected to the intimate spheres of the informal economy. For the domestic super-elite who use the levers of political power to channel foreign capital into real estate and manufacturing projects, conspicuous consumption is a means of projecting an image of Asian ascendancy to potential investors. For Viet Kieu and Westerners who bring remittances into the local economy, personal relationships with local sex workers reinforce their ideas of Asia's rise and Western decline, while simultaneously bolstering their diminished masculinity. *Dealing in Desire* illuminates Ho Chi Minh City's sex industry as not just a microcosm of the global economy, but a critical space where dreams and deals are traded. A masterful work of personal reportage, this volume is also a vibrant portrait of a mysterious people and an essential document of a disappearing culture. Fabled, feared, romanticized, and reviled, the Gypsies—or Roma—are among the least understood people on earth. Their culture remains largely obscure, but in *Isabel Fonseca* they have found an eloquent witness. In *Bury Me Standing*, alongside unforgettable portraits of individuals—the poet, the politician, the child prostitute—Fonseca offers sharp insights into the humor, language, wisdom, and taboos of the Roma. She traces their exodus out of India 1,000 years ago and their astonishing history of persecution: enslaved by the princes of medieval Romania; massacred by the Nazis; forcibly assimilated by the communist regimes; evicted from their settlements in Eastern Europe, and most recently, in Western Europe as well. Whether as handy scapegoats or figments of the romantic imagination, the Gypsies have always been with us—but never before have they been brought so vividly to life. Includes fifty black and white photos. *Sociology in Modules* offers approachable content in a well-organized, flexible teaching format. The comprehensive program allows instructors to choose the content they'd like to present and introduce it in a layout that students can manage. *Connect*, the proven online experience, adapts to student's learning needs, enhancing the understanding of topics and developing their sociological imagination. When conducting parenting plan evaluations, mental health professionals need to be aware of a myriad of different factors. More so than in any other form of forensic evaluation, they must have an understanding of the most current findings in developmental research, behavioral psychology, attachment theory, and legal issues to substantiate their opinions. With a number of publications on child custody available, there is an essential need for a text focused on translating the research associated with the most important topics within the family court. This book addresses this gap in the literature by presenting an organized and in-depth analysis of the current research and offering specific recommendations for applying these findings to the evaluation process. Written by experts in the child custody arena, chapters cover issues associated with the most important and complex issues that arise in family court, such as attachment and overnight timesharing with very young children, dynamics between divorced parents and children's potential for resiliency, co-parenting children with chronic medical conditions and developmental disorders, domestic violence during separation and divorce, gay and lesbian co-parents, and relocation, among others. The scientific information provided in these chapters assists forensic mental health professionals to proffer empirically-based opinions, conclusions and recommendations. *Parenting Plan Evaluations* is a must-read for legal practitioners, family law judges and attorneys, and other professionals seeking to understand more about the science behind child custody evaluations. In 2008, the Musée des Beaux-Arts de Lyon acquired a painting called *The Flight into Egypt* which was attributed to the French artist Nicolas Poussin. Thought to have been painted in 1657, the painting had gone missing for more than three centuries. Several versions were rediscovered in the 1980s and one was passed from hand to hand, from a family who had no idea of its value to gallery owners and eventually to the museum. A painting that had been sold as a decorative object in 1986 for around 12,000 euros was acquired two decades later by the Musée des Beaux-Arts de Lyon for 17 million euros. What does this remarkable story tell us about the nature of art and the way that it is valued? How is it that what seemed to be just an ordinary canvas could be transformed into a masterpiece, that a decorative object could become a national treasure? This is a story permeated by social magic the social alchemy that transforms lead into gold, the ordinary into the extraordinary, the profane into the sacred. Focusing on this extraordinary case, Bernard Lahire lays bare the beliefs and social processes that underpin the creation of a masterpiece. Like a detective piecing together the clues in an unsolved mystery he carefully reconstructs the steps that led from the same material object being treated as a copy of insignificant value to being endowed with the status of a highly-prized painting commanding a record-breaking price. He thereby shows that a painting is never just a painting, and is always more than a piece of stretched canvass to which brush strokes of paint have been applied: this object, and the value we attach to it, is also the product of a complex array of social processes – with its distinctive institutions and experts – that lies behind it. And through the history of this painting, Lahire uncovers some of the fundamental structures of our social world. For the social magic that can transform a painting from a simple copy into a masterpiece is similar to the social magic that is present throughout our societies, in economics and politics as much as art and religion, a magic that results from the spell cast by power on those who tacitly recognize its authority. By following the trail of a single work of art, Lahire interrogates the foundations on which our perceptions of value and our belief in institutions rest and exposes the forms of domination which lie hidden behind our admiration of works of art. *Introduction to Sociology 3e* aligns to the topics and objectives of many introductory sociology courses. It is arranged in a manner that provides foundational sociological theories and contexts, then progresses through various aspects of human and societal interactions. The new edition is focused on driving meaningful and memorable learning experiences related to critical thinking about society and culture. The text includes comprehensive coverage of core concepts, discussions and data relevant to a diverse audience, and features that draw learners into the discipline in powerful and personal ways. Overall, *Introduction to Sociology 3e* aims to center the course and discipline as crucial elements for understanding relationships, society, and civic engagement; the authors seek to lay the foundation for students to apply what they learn throughout their lives and careers. According to public health officials, obesity poses significant health risks and has become a modern-day epidemic. A closer look at this so-called epidemic, however, suggests that there are multiple perspectives on the fat body, not all of which view obesity as a health hazard. Alongside public health officials at the Centers for Disease Control and Prevention are advertisers of the fashion-beauty complex, food industry advocates at the Center for Consumer Freedom, and activists at the National Association to Advance Fat Acceptance. *Framing Fat* takes a bird's-eye view of how these multiple actors construct the fat body by identifying the messages these groups put forth, particularly where issues of beauty, health, choice and responsibility, and social justice are concerned. Samantha Kwan and Jennifer Graves examine how laypersons respond to these conflicting messages and illustrate the gendered, raced, and classed implications within them. In doing so, they shed light on how dominant ideas about body fat have led to the moral indictment of body nonconformists, essentially “framing” them for their fat bodies. Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States. Tradition recognises five social sciences: anthropology, economics, social psychology, sociology, and political science. But who knows what is going on in all five disciplines? Social scientists from one discipline often know little or nothing about the progress made by social scientists from another discipline working on essentially the same social problem. Sometimes, even of a neighbouring discipline is terra incognita. the methodology The problem becomes worse when we widen the remit to natural scientists and engineers. I have found little evidence myself that they see themselves as standing on the other side of an unbridgeable gulf between two cultures. They observe the intellectual excesses of those few 'newage' social scientists who see themselves fighting a 'science war', but the ignorance of these innumerate critics is so apparent in their grossly naive attacks on natural science, that they are not taken

seriously. However, although natural scientists appreciate that most social science is genuine science, they seldom know much about how and why it is done as it is. This can lead to serious inefficiencies in areas in which the traditional frontiers between social and natural science are melting away. An example is the frontier between the economies of imperfect competition and evolutionary biology. Reversing the usual bias, the evolutionary biologists commonly know little mathematics, and hence find the game theory literature hard to read, with the result that they often spend their time re-inventing the wheel. The first decade of the 21st century saw a remarkable number of large-scale disasters. Earthquakes in Haiti and Sumatra underscored the serious economic consequences that catastrophic events can have on developing countries, while 9/11 and Hurricane Katrina showed that first world nations remain vulnerable. The *Social Roots of Risk* argues against the widespread notion that cataclysmic occurrences are singular events, driven by forces beyond our control. Instead, Kathleen Tierney contends that disasters of all types—be they natural, technological, or economic—are rooted in common social and institutional sources. Put another way, risks and disasters are produced by the social order itself—by governing bodies, organizations, and groups that push for economic growth, oppose risk-reducing regulation, and escape responsibility for tremendous losses when they occur. Considering a wide range of historical and looming events—from a potential mega-earthquake in Tokyo that would cause devastation far greater than what we saw in 2011, to BP's accident history prior to the 2010 blowout—Tierney illustrates trends in our behavior, connecting what seem like one-off events to illuminate historical patterns. Like risk, human resilience also emerges from the social order, and this book makes a powerful case that we already have a significant capacity to reduce the losses that disasters produce. A provocative rethinking of the way that we approach and remedy disasters, *The Social Roots of Risk* leaves readers with a better understanding of how our own actions make us vulnerable to the next big crisis—and what we can do to prevent it. *Introduction to Sociology 2e* adheres to the scope and sequence of a typical, one-semester introductory sociology course. It offers comprehensive coverage of core concepts, foundational scholars, and emerging theories, which are supported by a wealth of engaging learning materials. The textbook presents detailed section reviews with rich questions, discussions that help students apply their knowledge, and features that draw learners into the discipline in meaningful ways. The second edition retains the book's conceptual organization, aligning to most courses, and has been significantly updated to reflect the latest research and provide examples most relevant to today's students. In order to help instructors transition to the revised version, the 2e changes are described within the preface. The images in this textbook are grayscale.
