Pain Management and the Opioid Epidemic Nov 08 2020 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the

context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Fundamentals of Geriatric Pharmacotherapy Sep 30 2022 By 2050, the world's 65 and older population will double, and the 85 and older population will grow fivefold. As the number of older patients surges, so too will the medication management challenges pharmacists and other health care providers face in this population. [Pharmacotherapy for Adults with Alcohol-use Disorders in Outpatient Settings](#) Jan 23 2022

OBJECTIVES: To conduct a systematic review and meta-analysis of the efficacy, comparative effectiveness, and harms of medications (both FDA approved and others) for adults with alcohol-use disorders, and to evaluate the evidence from primary care settings. **DATA SOURCES:** PubMed(r), Cochrane Library, PsycINFO(r), CINAHL(r), Embase(r), U.S. Food and Drug Administration Web site, ClinicalTrials.gov, and World Health Organization International Clinical Trials Registry Platform (January 1, 1970, to October 11, 2013). **REVIEW METHODS:** Two investigators independently selected, extracted data from, and rated risk of bias of studies. We conducted meta-analyses using random-effects models. We graded strength of evidence (SOE) based on established guidance. **RESULTS:** We included 135 studies. Most patients met criteria for alcohol dependence; mean ages

were in the 40s. Studies typically included psychosocial cointerventions; effect sizes reflect the added benefits of medications. Foracamprosate and oral naltrexone (50 mg per day), numbers needed to treat (NNTs) to prevent 1 person from returning to any drinking were 12 and 20, respectively (moderate SOE); NNT to prevent 1 person from returning to heavy drinking was 12 for oral naltrexone (50 mg per day) (moderate SOE). Our meta-analyses of four head-to-head trials found no statistically significant difference between the two medications for consumption outcomes (moderate SOE). For injectable naltrexone, meta-analyses found no significant benefit for return to any or heavy drinking, but found a reduction in heavy drinking days (low SOE). Evidence from well-controlled trials does not support efficacy of disulfiram, except possibly for patients with excellent adherence. Among medications used off label, moderate evidence supports the efficacy of nalmefene and topiramate for improving some consumption outcomes, and limited evidence supports the efficacy of valproic acid. Evidence from primary care settings was scant. We found insufficient direct evidence to conclude whether medications for alcohol-use disorders are effective for improving health outcomes. Compared with placebo, patients treated withacamprosate had a higher risk of anxiety, diarrhea, and vomiting; those treated with naltrexone had a higher risk of dizziness, nausea, and vomiting. In head-to-head studies, the risks of headache and vomiting were slightly higher for naltrexone than foracamprosate. Individual trials of topiramate reported a significantly increased risk of paresthesias, anorexia, difficulty concentrating, dizziness, psychomotor slowing, and other adverse effects. Our meta-analyses for variation in naltrexone response related to OPRM1 polymorphisms found no statistically significant difference between A-allele homozygotes and those with at least one G allele, but confidence intervals were wide and additional studies are needed.

CONCLUSIONS: Acamprosate and oral naltrexone have the best evidence for improving alcohol

consumption outcomes for patients with alcohol-use disorders. Head-to-head trials have not consistently established the superiority of one medication. Thus, other factors may guide medication choices, such as frequency of administration, potential adverse events, coexisting symptoms, and availability of treatments.

Pharmacology for the Primary Care Provider Jul 17 2021 This is a Pageburst digital textbook; Written by and for nurse practitioners, this practical textbook focuses on what primary care providers need to learn and practice drug therapy. With an overall emphasis on patient teaching and health promotion, you will learn how to provide effective patient teaching about medications and how to gain patient compliance. Drug coverage focuses on "key drugs? rather than "prototype drugs,? so you can find important information about the most commonly used drugs rather than the first drug in each class. You will also find discussions on the legal and professional issues unique to nurse practitioners and other primary care providers. The 3rd edition also features an expanded emphasis on established clinical practice guidelines and evidence-based practice, plus two new chapters that cover drugs for ADHD and drugs for dementia. UNIQUE! Written specifically for nurse practitioners with an overall emphasis on patient teaching and health promotion. UNIQUE! Covers specific topics such as prescriptive authority, role implementation, and writing prescriptions. Presents comprehensive coverage of the drugs most commonly prescribed in - and the issues most relevant to - primary care practice. UNIQUE! Identifies the Top 200 drugs in chapter openers with a special icon and covers them in-depth to familiarize you with the most important, need-to-know drug information. Uses a consistent heading scheme for each prototype drug discussion to make it easier to learn and understand key concepts. Includes an introductory chapter on "Design and Implementation of Patient Education? that highlights content on patient teaching and compliance.

Includes specific "Patient Education" sections in each drug chapter. Provides extensive coverage of drug therapy for special populations to alert you to special considerations based on age, pregnancy, race and other factors. A separate chapter on "Complementary and Alternative Therapies" discusses the available complementary and alternative modalities, including detailed information on actions, uses, and interactions of commonly used herbs. Drug Overview tables at the beginning of each chapter outline the classifications of drugs discussed and provide a handy reference of drug classes and subclasses, generic names, and trade names. Clinical Alerts highlight essential information that primary care providers must remember in order to avoid serious problems, including cautions for prescribing, information about drug interactions, or warnings about particularly ominous adverse effects. An entire unit covers drugs for health promotion to introduce you to drugs commonly seen in outpatient primary care settings and to prepare you for practice in a society increasingly focused on health promotion and disease prevention. Includes separate chapters on Immunizations and Biologicals, Weight Management, Smoking Cessation, Vitamins and Minerals, Over-the-Counter Medications, and Complementary and Alternative Therapies. Drug coverage focuses on "key drugs" rather than "prototype drugs," since prototype drugs are technically the first drug in a given class but not always the best, newest, or most commonly prescribed drug. Separate chapter on "Treatment Guidelines and Evidence-Based Decision-Making" provides practical guidelines for using the current best evidence to make decisions about the care of individual patients. All content extensively reviewed by a PharmD consultant to ensure the most accurate, current, and clinically relevant pharmacology content. Includes separate chapters on drugs to treat ADHD and dementia in order to expand on the current treatments available for these two common conditions.

The Pharmacist's Guide to Evidence-Based Medicine for Clinical Decision Making Nov 01

2022 While most practicing pharmacists are familiar with the term and the general concept of evidence-based medicine, few are adequately trained in the clinical application of these skills. Developed to give clinical pharmacists an edge, this book provides a practical approach for applying sound EBM principles to your clinical decision making process. Decision making based on personal experience alone, without knowledge from well-designed, controlled, randomized trials with adequate sample size, often overestimates the efficacy and underestimates the safety risks associated with drugs. This book provides a roadmap that is instructional and, most importantly, practical for the pharmacist so these new skills can be applied immediately in practice. Based on a five-step process perfected over ten years at the University of Missouri, Kansas City, School of Pharmacy, this exciting new approach will:

- Reduce complexity
- Shorten time for decision making support
- Maintain rigor
- Categorize quality of the evidence in a simple, straightforward, and logical manner
- Provide a process designed specifically for pharmacists making drug therapy decisions

Use of examples, tables, diagrams, and key points highlighted throughout the book and summarized at the end of each chapter provide the pharmacist with skills they can implement the next day to begin applying EBM principles to their practice.

Renal Pharmacotherapy May 03 2020 To promote effectiveness and minimize possible toxicity, the dosage of certain medications must be adjusted in persons with compromised kidney function. Failure to enjoin appropriate dosage adjustments in patients with abnormal or rapidly changing kidney function continues to lead to reports of drug toxicity involving a broad array of renally eliminated medications. This updated edition captures nearly 200 new drugs that have been approved by the FDA since the initial publication of *Renal Pharmacotherapy*. It also covers new evidence that has emerged regarding the need to adjust dosage of certain older medications that are

eliminated by the kidneys. Additionally, it presents new data that are being continuously derived in the areas of patient-specific dose individualization for drugs of all types. Comprehensive, convenient, and evidence-based, this reference closes several identified knowledge gaps and will continue to be the leading collection of dosage recommendations for patients with compromised kidney function.

Real-World Evidence in Drug Development and Evaluation Aug 06 2020 Real-world evidence (RWE) has been at the forefront of pharmaceutical innovations. It plays an important role in transforming drug development from a process aimed at meeting regulatory expectations to an operating model that leverages data from disparate sources to aid business, regulatory, and healthcare decision making. Despite its many benefits, there is no single book systematically covering the latest development in the field. Written specifically for pharmaceutical practitioners, *Real-World Evidence in Drug Development and Evaluation*, presents a wide range of RWE applications throughout the lifecycle of drug product development. With contributions from experienced researchers in the pharmaceutical industry, the book discusses at length RWE opportunities, challenges, and solutions. Features Provides the first book and a single source of information on RWE in drug development Covers a broad array of topics on outcomes- and value-based RWE assessments Demonstrates proper Bayesian application and causal inference for real-world data (RWD) Presents real-world use cases to illustrate the use of advanced analytics and statistical methods to generate insights Offers a balanced discussion of practical RWE issues at hand and technical solutions suitable for practitioners with limited data science expertise

Real-World Evidence Generation and Evaluation of Therapeutics Dec 02 2022 The volume and complexity of information about individual patients is greatly increasing with use of electronic records and personal devices. Potential effects on medical product development in the context of

this wealth of real-world data could be numerous and varied, ranging from the ability to determine both large-scale and patient-specific effects of treatments to the ability to assess how therapeutics affect patients' lives through measurement of lifestyle changes. In October 2016, the National Academies of Sciences, Engineering, and Medicine held a workshop to facilitate dialogue among stakeholders about the opportunities and challenges for incorporating real-world evidence into all stages in the process for the generation and evaluation of therapeutics. Participants explored unmet stakeholder needs and opportunities to generate new kinds of evidence that meet those needs. This publication summarizes the presentations and discussions from the workshop.

Medications for Opioid Use Disorder Save Lives Feb 21 2022 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater

risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

The New Prescriber Oct 08 2020 The New Prescriber is a comprehensive, accessible textbook that provides essential coverage of the three core components for prescribing: the client/patient, the evidence, and the pharmacology. Divided into three sections, this text first looks at the consultation with the patient, and outlines legal, professional and ethical frameworks which guide medical and non-medical prescribing. The second section is devoted to evidence-based practice, highlighting key skills essential to all clinicians. This section encourages the student to identify why evidence-based practice should underpin prescribing decisions. The third and final section is concerned with pharmacology. The student is introduced to basic concepts of pharmacodynamics and pharmacokinetics, adverse drug reactions and variability of response. The importance of these pharmacological principles is highlighted throughout the subsequent discussion of drug groups affecting major body systems. Key features: Pulls together all key elements of prescribing using an integrated approach 'Stop and Think' boxes and practice application activities provided throughout,

enabling the reader to link theory to practice Key terms and glossary provided This text is invaluable for all nursing, health and medical students taking courses in prescribing and pharmacology.
