Proposed Definitions of Safe Driving Dec 09 2020 A survey of traffic accident literature reveals a marked lack of agreement on what constitutes a valid measure of driving safety, as well as an apparent lack of strong support for a single coherent theoretical model to explain or account for the occurrence of driving collisions. This discussion paper suggests that there is a tendency to confuse the interrelated but distinctly different concepts of legal and safe driving. The paper reviews the driver education process and the characteristics of the driver's license examination in relation to acquisition and retention of safe driving skills. The paper then proposes a definition of safe driving, contrasts this with legal driving, and suggests a cognitive approach to collision prevention training and driver licensing based on the teaching of safety protocols.

Preventing Teen Motor Crashes Apr 24 2022 From a public health perspective, motor vehicle crashes are among the most serious problems facing teenagers. Even after more than six months of

being licensed to drive alone, teens are two to three times more likely to be in a fatal crash than are the more experienced drivers. Crash rates are significantly higher for male drivers, and young people in the United States are at greater risk of dying or being injured in an automobile than their peers around the world. In fact, in 2003 motor vehicle crashes was the leading cause of death for youth ages 16-20 in the United States. Understanding how and why teen motor vehicle crashes happen is key to developing countermeasures to reduce their number. Applying this understanding to the development of prevention strategies holds significant promise for improving safety but many of these efforts are thwarted by a lack of evidence as to which prevention strategies are most effective. Preventing Teen Motor Crashes presents data from a multidisciplinary group that shared information on emerging technology for studying, monitoring, and controlling driving behavior. The book provides an overview of the factual information that was presented, as well as the insights that emerged about the role researchers can play in reducing and preventing teen motor crashes.

It is an in depth look at an unseen epidemic that is on going every day in all the lives of drivers here in the U.S. (averaging 200 deaths daily)and in fact throughout the entire world (1.3+ million deaths every year). From how we all drive to an actionable plan to end this epidemic. The book will take you on a "trip" of self discovery that will challenge you as either a new driver or very experienced.
