Revered by Naval Aviators as the 'last of the gunfighters' due to its quartet of Colt-Browning Mk 12 20 mm cannon, the F-8 Crusader enjoyed great success against VPAF MiG-17s during the Rolling Thunder campaign of 1966-68. But, the MiG-17's unequalled low-speed manoeuvrability, small size and powerful cannon armament meant that the American forces didn't have it all their own way. This fully illustrated book, featuring photographs, maps and battlescene artwork, reveals the tactics that were developed by pilots on both sides to give themselves the edge in air-to-air dogfights, allowing the reader to understand how the differing design and development doctrines played a part in combat. This book provides a comprehensive overview of the current limitations and unmet needs in Hepatocellular Carcinoma (HCC) diagnosis, treatment, and prevention. It also provides newly emerging concepts, approaches, and technologies to address challenges. Topics covered include changing landscape of HCC etiologies in association with health disparities, framework of clinical management algorithm, new and experimental modalities of HCC diagnosis and prognostication, multidisciplinary treatment options including rapidly evolving molecular targeted therapies and immune therapies, multi-omics molecular characterization, and clinically relevant experimental models. The book is intended to assist collaboration between the diverse disciplines and facilitate forward and reverse translation between basic and clinical research by providing a comprehensive overview of relevant areas, covering epidemiological trend and population-level patient management strategies, new diagnostic and prognostic tools, recent advances in the standard care and novel therapeutic approaches, and new concepts in pathogenesis and experimental approaches and tools, by experts and opinion leaders in their respective fields. By thoroughly and concisely covering whole aspects of HCC care, Hepatocellular Carcinoma serves as a valuable reference for multidisciplinary readers, and promotes the development of personalized precision care strategies that lead to substantial improvement of disease burden and patient prognosis in HCC. Uses mathematical and statistical techniques to extract trends from chemical analysis. Introduces scientists to powerful new tools that will allow them to obtain massive amounts of data from computer-controlled instrumentation and then extract the information they need. Chapter sequence leads the reader through a sample analysis to resolution and pattern recognition. First introductory text on the relatively new field. In 1942, the massive Japanese naval base and airfield at Rabaul was a fortress standing in the Allies' path to Tokyo. It was impossible to seize Rabaul, or starve the 100,000-strong garrison out. Instead the US began an innovative, hard-fought two-year air campaign to draw its teeth, and allow them to bypass the island completely. The struggle decided more than the fate of Rabaul. If successful, the Allies would demonstrate a new form of warfare, where air power, with a judicious use of naval and land forces, would eliminate the need to occupy a ground objective in order to control it. As it turned out, the Siege of Rabaul proved to be more just than a successful demonstration of air power - it provided the roadmap for the rest of World War II in the Pacific. "There is a new revolution happening in sports as more and more athletes are basing their success on this game-changing combination: health, nutrition, training, recovery, and mindset. Unfortunately, the evidence-based techniques that the expert PhDs, academic institutions, and professional performance staffs follow can be in stark contrast to what many athletes actually practice. When combined with the noise of social media, old-school traditions, and bro-science, it can be difficult to separate fact from fiction. Peak is a groundbreaking book exploring the fundamentals of high performance (not the fads), the importance of consistency (not extreme effort), and the value of patience (not rapid transformation). Dr. Marc Bubbs makes deep science easy to understand, and with information from leading experts who are influencing the top performers in sports on how to achieve world-class success, he lays out the record-breaking feats of athleticism and strategies that are rooted in this personalized approach. Dr. Bubbs expertly brings together the worlds of health, nutrition, and exercise and synthesizes the salient science into actionable guidance. "An uplifting and compelling leadership book based on the hard-earned lessons learned by the author when he was head coach of the Ann Arbor Huron High School ice hockey team, about how he motivated, engaged, and empowered his players to go from being ranked as the absolute worst team in the nation to one of the country's best"-- This publication represents the culmination of the National Academies Keck Futures Initiative (NAKFI), a program of the National Academy of Sciences, the National Academy of Engineering, and the National Academy of Medicine supported by a 15-year, \$40 million grant from the W. M. Keck Foundation to advance the future of science through interdisciplinary research. From 2003 to 2017, more than 2,000 researchers and other professionals across disciplines and sectors attended an annual "think-tank" style conference to contemplate real-world challenges. Seed grants awarded to conference participants enabled further pursuit of bold, new research and ideas generated at the conference. The world has gone digital and so have our clients' estates. Digital assets may simply be electronic records, but they are the digital gateway to our lives. They are our memories, our money, and our records, making technology the new player at the estate planning table. The Digital Executor®: Unraveling the New Path for Estate Planning arms estate advisors, business owners, service providers, and the broader estate and technology industries with heightened awareness of client expectations regarding their digital estates. Everyone needs a will and in today's age of digitization, estate plans must include your client's digital life. This book is a primer for understanding a client's personal use case when navigating estate management in the digital age with introductions to technology and the underlying aspects and differences between digital asset classes. With technology being the new player at the client's estate planning table, estate advisors must be educated, motivated, and prepared, adapting policies and processes for operating in the digital world. Equally, technology and service providers must align with the stars to be integrated partners in estate industry conversations. Sharon's first book, Your Digital Undertaker: Exploring Death in the Digital Age in Canada, was

about digital assets in the context of an individual's or client's estate planning life cycle. This follow-up book, *Digital Executor®: Unraveling the New Path for Estate Planning* is about digital assets in the context of the estate industry. This book draws the reader into the world of estate planning with a digital twist, bringing together how the global estate industry, technology and service providers must address client expectations about their digital assets and the implications of the changing role of the fiduciary/executor. To understand the role of digital assets in the estate industry, we must first understand technology, the client's user context, and the changing role of the estate advisor. From an estate industry perspective, if today's executor is a digital executor and today's fiduciary is a digital fiduciary, then today's advisor must be a digital advisor.

Patient Blood Management (PBM) is an innovative clinical concept that aims to reduce the need for allogenic blood transfusions, cut health-care costs, and avert or correct the risk factors related to blood transfusion, thus minimizing the rate of side effects and complications. This comprehensive hands-on volume offers a three-point approach for the implementation of PBM to improve patient outcome, focusing on how to prevent or treat anemia, reduce blood loss, and increase anemia tolerance. The book also goes beyond preoperative PBM, with detailed accounts of coagulation disorder management and the administration of coagulation products and platelet concentrates. Special Features: Presents a clear three-pillar strategy for the application of PBM: diagnosis and treatment of anemia, reduction of peri-interventional blood loss, and optimization of the tolerance to anemia in the everyday clinical setting. Covers issues such as PBM during surgery, requirements for modern transfusion medicine, ordering blood products, the role of pre-anesthesia clinics, benchmarking processes, and potential implications of PBM in the public health sector. Overview of research in PBM including landmark studies and current clinical trials. Boxes in each chapter highlighting key information, core statements, and summaries. A multidisciplinary and international team of contributors experienced in PBM. *Patient Blood Management* is a guide for clinicians and residents whose patients are at risk for anemia, coagulation disorders, or severe blood loss. Anesthesiologists, surgeons, and specialists involved in the use of blood and blood products can use the book for quick reference or to learn more about a leading-edge concept for optimizing patient safety and improving outcome. Features seven true stories of brave boys and girls who lived through the Holocaust. Their compelling accounts are based on exclusive, personal interviews with the survivors. Using real names, dates and places, these stories are factual versions of their recollections.

Financial Planning has been thoroughly revised to reflect the legislative and regulatory changes that affect the Australian financial planning industry. This new edition considers a number of reforms introduced as a consequence of the global financial crisis and the Henry Review on taxation reform. The text continues to present a comprehensive introduction to financial planning decisions, services and products, risk management and the importance of long term strategic financial planning and life-long management. The text is the new edition of what was previously titled *Personal Finance* which has been a market leading textbook in the area of financial planning for 10 years. As more and more Australians look to financial planners for information and guidance on investment opportunities, and short-term and long-term financial planning goals, this new edition reflects the financial planning industry need to ensure that its members are accredited and comply with industry recognised professional and ethical skills. This text provides a comprehensive developmental and historical review of nursing theory. The book offers a contemporary analysis of the evolution of nursing and represents the degree to which many scholars view the focus and mission of nursing as a discipline through the development of its theoretical base. This revised reprint of the Third Edition has updated material in the chapter on Analysis of Theoretical Writing in Nursing. The chapter on Metatheory and Theory Bibliography has been updated and expanded. Tables and figures have been added to enhance visual understanding of concepts. This handbook provides an overview of the latest science of the influence of nutrition on blood cells and blood diseases. Blood diseases include a broad range of nutritional deficiencies, leukemias and genetic mutations, associated with an increased risk of infections. Reduced red blood cell production can lead to nutritional diseases and anemias, requiring iron supplementation. Patients with anemia feel sick, fatigued and have nausea affecting food intake, worsening their condition. Changes in serum and blood cells affect coagulation, as well as the immune cells' production of cytokines and immunoglobulin. The blood cells interactions affect all major organ systems. Nutrition and food plays a key role in the health of blood cells and their functions. Vitamins and minerals, such as vitamin E, C and iron, affect the production of blood cells and their proteins, including hemoglobin. In addition, other nutrients, like glutamine, L-carnitine and the amino-acid taurine, play a crucial role in the production of blood cells and blood/related diseases. This book discusses nutritional therapies concerning stem cell transplantation, iron deficiency, cardiovascular diseases, sickle cell anemia and sepsis patients, among others. Nutritional therapy and management in leukemia is given a major focus. The key goal of this handbook is to review some of the nutritional approaches for efficacy in treatment of blood diseases, reduction of their clinical complications and the improvement of the quality of life of these patients.

Slavery in the Black Sea Region, c. 900-1900 is a collection of studies that investigate various types of unfreedom in the wider Black Sea area in the medieval and early modern periods. The *Congressional Record* is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The *Congressional Record* began publication in 1873. Debates for sessions prior to 1873 are recorded in *The Debates and Proceedings in the Congress of the United States (1789-1824)*, *the Register of Debates in Congress (1824-1837)*, and *the Congressional Globe (1833-1873)*. In *Handbook of Drug Monitoring Methods: Therapeutics and Drug Abuse*, authors discuss the different analytical techniques used in today's practice of therapeutic drug monitoring and drugs of abuse as well as alcohol testing with relevant theory, mechanism, and in-depth scientific discussion on each topic. This volume is the perfect handbook and quick reference for any clinical laboratory, allowing clinicians to find the potential source of a false-positive or a false-negative result in the daily operation of a toxicology laboratory. At the same time, this book can also be used as a reference for medical technologists, supervisors, laboratory directors, clinical chemists, toxicologists, and pathologists to find in-depth cause of a potential interference and what tests can be ordered to circumvent such problem. The volume's first half focuses on various issues of therapeutic drug monitoring. Additional chapters cover analysis of heavy metals, alcohol testing, and issues of drugs of abuse testing. These chapters are written by experts in their relative sub-specialties and also by the editor. Comprehensive and timely, *Handbook of Drug Monitoring Methods: Therapeutics and Drug Abuse* is the ideal text for clinicians and researchers monitoring alcohol and drug testing and other important tasks of toxicological laboratory services.

Human Adaptation to Spaceflight: The Role of Nutrition reflects a (brief) review of the history of and current state of knowledge about the role of nutrition in human space flight. We have attempted to reorganize this from a more physiological point of view, and to highlight systems, and the nutrients that support them, rather than the other way around. We hope we have captured in this book the state of the field of study of the role of human nutrition in space flight, along with the work leading up to this state, and some guideposts for work remaining to be done and gaps that need to be filled. NOTE: NO FURTHER DISCOUNTS FOR ALREADY REDUCED SALE ITEMS. This text provides a concise yet comprehensive overview of anemia in the young and old. The first section of the volume features age-specific diagnostic approaches to anemia, from the perinatal period to the elderly, with a particular emphasis on age-specific epidemiology, differential diagnosis, and testing. The second section focuses on specific anemia disorders, including inherited bone marrow failure syndromes, iron deficiency anemia, renal anemia, pure red cell anemia, and anemia of inflammation and chronic disease. Each chapter in this section revolves around a specific syndrome or group of syndromes, and addresses pathophysiology, diagnostic issues, natural history/prognosis, and treatment. Written by experts in the field, *Anemia in the Young and Old: Diagnosis and Management* is a valuable resource for clinicians and practitioners who treat the pediatric and elderly patient population afflicted with anemia. In the last few decades, Spectroscopy and its application dramatically diverted science in the direction of brand new era. This book reports on recent progress in spectroscopic technologies, theory and applications of advanced spectroscopy. In this book, we (INTECH publisher, editor and authors) have invested a lot of effort to include 20 most advanced spectroscopy chapters. We would like to invite all spectroscopy scientists to read and share the knowledge and contents of this book. The textbook is written by international scientists with expertise in Chemistry, Biochemistry, Physics, Biology and Nanotechnology many of which are active in research. We hope that the textbook will enhance the knowledge of scientists in the complexities of some spectroscopic approaches; it will stimulate both professionals and students to dedicate part of their future research in understanding relevant mechanisms and applications of chemistry, physics and material sciences. This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient. Arien Mack and Irvin Rock make the radical claim that there is no conscious perception of the visual world without attention to it. Many people believe that merely by opening their eyes, they see everything in their field of view; in fact, a line of psychological research has been taken as evidence of the existence of so-called preattentive perception. In *Inattentive Blindness*, Arien Mack and Irvin Rock make the radical claim that there is no such thing -- that there is no conscious perception of the visual world without attention to it. The authors present a narrative chronicle of their research. Thus, the reader follows the trail that led to the final conclusions, learning why initial hypotheses and explanations were discarded or revised, and how new questions arose along the way. The phenomenon of inattentive blindness has theoretical importance for cognitive psychologists studying perception, attention, and consciousness, as well as for philosophers and neuroscientists interested in the problem of consciousness.
