Foundations for Designing User-Centered Systems introduces the fundamental human capabilities and characteristics that influence how people use interactive technologies. Organized into four main areas—anthropometrics, behaviour, cognition and social factors—it covers basic research and considers the practical implications of that research on system design. Applying what you learn from this book will help you to design interactive systems that are more usable, more useful and more effective. The authors have deliberately developed Foundations for Designing User-Centered Systems to appeal to system designers and developers, as well as to students who are taking courses in system design and HCI. The book reflects the authors' backgrounds in computer science, cognitive science, psychology and human factors. The material in the book is based on their collective experience which adds up to almost 90 years of working in academia and both with, and within, industry; covering domains that include aviation, consumer Internet, defense, eCommerce, enterprise system design, health care, and industrial process control. What is crime? What constitutes violence? What is it permissible to talk about or describe in cultural depictions of crime and violence? What is the impact of portraying crime and violence on an audience? How are crime and violence presented to make them culturally acceptable for educational or entertainment purposes? This book examines

representations of violence and crime both historically and in relation to contemporary culture across a wide range of media, including fiction, film, art, biography, and journalism, to interrogate the issues raised. While some articles here analyze the ethics invoked by different representative frameworks, the danger that violence will be treated as spectacle, and the implications of using violence as a polemical device to shift public sentiment, others address the relationship between coercive power, crime and violence that is not necessarily primarily physical, and the political or ideological contexts in which narratives of good and evil are constructed and crime defined. Presents the history of art from prehistoric times to the present day, describes major artists and movements, and details the influence of art on society through the ages. Initially published in 1985, *Marching to Different Drummers* was one of the first sources to pull together information on what was a newly flourishing topic in education. Now, more than a decade later, this revised and expanded edition takes a fresh look at the subject. Among the new chapters are a discussion of the importance of knowledge about students' culture, learning styles in light of recent discoveries about the functioning of the brain,

and how learning styles relate to Howard Gardner's theory of multiple intelligences. Part I defines style and looks at the history of style research. Part II describes applications of style in seven areas, illustrated through the research models of Carl Jung, Herman A. Witkin, Walter Barbe and Raymond Swassing, Rita Dunn and Kenneth Dunn, Anthony Gregorc, Bernice McCarthy, and Howard Gardner. Part III identifies common questions and discusses implementation and staff development. A comprehensive annotated bibliography sets the stage for further study. Authors Pat Burke Guild and Stephen Garger have spent nearly 25 years studying styles, applying its research, teaching about styles, and listening to students and educators talk about styles. Their extensive experience in teacher education over the past decade grounds the theory in the second edition of *Marching to Different Drummers* with a practicality that all educators will value. Gain a complete understanding of the functioning of the gastrointestinal system with this concise, engagingly written text *Gastrointestinal Physiology* explains the operation and performance of one of the body's most crucial systems. Using clear, compelling language, the book's presentation makes it easy to absorb the content and integrate it as you learn the physiology of other bodily systems. Written to help you understand essential concepts rather than merely memorize facts, this unique text examines many medically relevant facets of this important body system, including anatomy, pathophysiology, and therapeutics, in concert with physiological information. FEATURES: Provides a thorough review of core concepts and highlights clinical application Covers the physiologic principles needed to understand and treat patients with digestive and liver diseases

Includes clinical examples that link basic science with the practice of medicine Incorporates new information on emerging topics such as the communication between the intestine and central nervous system that controls food intake, the myriad roles newly ascribed to the intestinal microbiota, contemporary approaches to therapy for a number of GI maladies, and the role of the gut in obesity Enhanced by valuable learning aids such as study questions, learning objectives, key concepts, numerous illustrations and charts, and recommended readings Planning today is more important than ever. Both acquisition and allocation of resources are increasingly difficult for arts organizations as a result of emerging technologies, reduced arts education, aging donors, and the advent of new forms of entertainment. It is essential for arts organizations to take a coherent approach to these issues to remain vibrant over time. In fact, most arts organizations do periodically attempt some kind of planning exercise. But a review of hundreds of such plans suggests that most contain merely a wish list, rather than concrete plans for the future: "We will increase ticket sales!" is a common "strategy" expressed in too many arts plans. In the absence of details about how ticket sales will be increased, it's an empty promise. In *Strategic Planning in the Arts*, Michael M. Kaiser, the former head of the Kennedy Center in Washington, DC, and an arts management guru, has produced a clear, concise guide for staff or board members of not-for-profit arts organizations who are responsible for developing, evaluating, or implementing plans. Relying on real-world cases and examples, Kaiser shows how to conceive, assess, and act on every part of the strategic plan, from the mission statement to the financial statement; from managing

the board to marketing. Praise for Michael Kaiser: "A rich yet tidy cornucopia of solutions for the challenges facing the American arts scene." - Washington Post

The Enemy is constantly seeking to fill your mind with destructive and harmful thoughts—whether of fear, worry, insecurity, anxiety, temptation, envy. . . . In *Don’t Give the Enemy a Seat at Your Table*, bestselling author and pastor Louie Giglio shares practical ways to overcome the Enemy’s lies and instead find peace and security in any challenging circumstance or situation. Stop the spiral of shame, temptation, and insecurity. Restore peace and rest in your life. Embrace the true purpose behind your journey through challenging circumstances. Break free from the endless cycle of destructive thinking. You can find freedom from the war inside your mind—if you allow Jesus, the Good Shepherd, to lead the battle. In August 2011, ethnographers Carolina Alonso Bejarano and Daniel M. Goldstein began a research project on undocumented immigration in the United States by volunteering at a center for migrant workers in New Jersey. Two years later, Lucia López Juárez and Mirian A. Mijangos García—two local immigrant workers from Latin America—joined Alonso Bejarano and Goldstein as research assistants and quickly became equal partners for whom ethnographic practice was inseparable from activism. In

Decolonizing Ethnography the four coauthors offer a methodological and theoretical reassessment of social science research, showing how it can function as a vehicle for activism and as a tool for marginalized people to theorize their lives. Tacking between personal narratives, ethnographic field notes, an original bilingual play about workers' rights, and examinations of anthropology as a discipline, the coauthors show how the participation of Mijangos García and López Juárez transformed the project's activist and academic dimensions. In so doing, they offer a guide for those wishing to expand the potential of ethnography to serve as a means for social transformation and decolonization. Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of

digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences. Packed with more sonographic images than ever before, the third edition of the Atlas of Ultrasound in Obstetrics and Gynecology helps you better understand and interpret sonographic imagery, and improve diagnostic accuracy of ultrasound images. This comprehensive visual tutorial is split into two distinct sections: obstetrical ultrasound and gynecological ultrasound. Each section covers normal and abnormal anatomy, pathology, and interventional procedures. This text presents statistical methods for studying causal effects and discusses how readers can assess such effects in simple randomized experiments. In the ancient disciple-rabbi relationship, the disciple would follow the rabbi so closely that he would be covered in the dust kicked up from his rabbi's feet.

Thousands of years later, though we walk on roads of pavement and not dust, we are still called to be disciples—to follow our Rabbi, Jesus Christ, so closely that we are covered with his life, changed, and made new. *Into His Likeness* provides an approachable but in-depth exploration of how to live as a disciple and experience the transformation Jesus wants to work in our lives. We might desire to live more like Christ, but we know we fall short. This book simply helps us follow those initial promptings of the Holy Spirit, so that we may more intentionally encounter Jesus anew each day and be more disposed to his grace changing us ever more into his likeness.

Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing

deaths per year of certain cancers, HIV/AIDS, and drownings, among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these trends, but that progress has been incremental and has stagnated more recently. *Getting to Zero Alcohol-Impaired Driving Fatalities* examines which interventions (programs, systems, and policies) are most promising to prevent injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities. *Habeas Viscus* focuses attention on the centrality of race to notions of the human. Alexander G. Weheliye develops a theory of "racializing assemblages," taking race as a set of sociopolitical processes that discipline humanity into full humans, not-quite-humans, and nonhumans. This disciplining, while not biological per se, frequently depends on anchoring political hierarchies in human flesh. The work of the black feminist scholars Hortense Spillers and Sylvia Wynter is vital to Weheliye's argument. Particularly significant are their contributions to the intellectual project of black studies vis-à-vis racialization and the category of the human in western modernity. Wynter and Spillers configure black studies as an endeavor to disrupt the governing conception of humanity as synonymous with white, western man. Weheliye posits black feminist theories of modern humanity as useful correctives to the "bare life and biopolitics discourse" exemplified by the works of Giorgio Agamben and Michel Foucault, which, Weheliye

contends, vastly underestimate the conceptual and political significance of race in constructions of the human. Habeas Viscus reveals the pressing need to make the insights of black studies and black feminism foundational to the study of modern humanity.
