Global connectivity is increasing, visibly and invisibly in trade, finance, culture, and information helping to spur economic growth, technological advance, and greater understanding and freedom, but global disconnects are growing as well. Ubiquitous electronics rely on high-value minerals scraped from the earth by miners kept poor by corruption and war. People abandon burning states for the often indifferent welcome of wealthier lands whose people, in turn, draw into themselves. Humanity's very success, underwritten in large part by lighting up gigatons of long-buried carbon for 200 years, now threatens humanity's future. The global governance institutions established after World War II to manage global threats, especially the twin scourges of war and poverty, have expanded in reach and impact, while paradoxically losing the political support of some of their wealthiest and most powerful members. Their problems mimic those of their members in struggling to adapt to new problems

and maintain trust in norms and public bodies. This volume argues, however, that a properly mandated, managed, and modernized global architecture offers unparalleled potential to midwife solutions to intractable issues from violent conflict and climate change to poverty and pandemic diseases that transcend borders and the capacities of individual actors. It offers just security as a new framework for charing innovating solutions and strategies for effective and essential global governance. Analysis of distribution of

past paper marks over the 2009 to 2015 period to help you focus your revision on key areas. Questions are split into Narrative and Numerical chapters, allowing you to drill the easy narrative areas on their own - narrative questions account for 30-35% of a typical Financial Management paper. Detailed questions on investment appraisal, capital markets and WACC, hedging and other areas. Full explanation of hedging approaches and calculations.
