In this thrilling new crime novel that ingeniously bridges Laurie R. King's Edgar and Creasey Awards—winning Kate Martinelli series and her bestselling series starring Mary Russell, San Francisco homicide detective Kate Martinelli crosses paths with Sherlock Holmes—in a spellbinding dual mystery that could come only from the “intelligent, witty, and complex” mind of New York Times bestselling author Laurie R. King.... Kate Martinelli has seen her share of peculiar things as a San Francisco cop, but never anything quite like this: an ornate Victorian sitting room straight out of a Sherlock Holmes story—complete with violin, tobacco-filled Persian slipper, and gunshots in the wallpaper that spell out the initials of the late queen. Philip Gilbert was a true Holmes fanatic, from his antiquated décor to his vintage wardrobe. And no mere fan of fiction's great detective, but a leading expert with a collection of priceless memorabilia—a collection some would kill for. And perhaps someone did: In his collection is a century-old manuscript purportedly written by Holmes himself—a manuscript that eerily echoes details of Gilbert's own murder. Now, with the help of her partner, Al Hawkin, Kate must follow the convoluted trail of a killer—one who may have trained at the feet of the greatest mind of all

times. IDEO, the widely admired, award-winning design and development firm that brought the world the Apple mouse, Polaroid's I-Zone instant camera, the Palm V, and hundreds of other cutting-edge products and services, reveals its secrets for fostering a culture and process of continuous innovation. There isn't a business in America that doesn't want to be more creative in its thinking, products, and processes. At many companies, being first with a concept and first to market are critical just to survive. In *The Art of Innovation*, Tom Kelley, general manager of the Silicon Valley based design firm IDEO, takes readers behind the scenes of this wildly imaginative and energized company to reveal the strategies and secrets it uses to turn out hit after hit. IDEO doesn't buy into the myth of the lone genius working away in isolation, waiting for great ideas to strike. Kelley believes everyone can be creative, and the goal at his firm is to tap into that wellspring of creativity in order to make innovation a way of life. How does it do that? IDEO fosters an atmosphere conducive to freely expressing ideas, breaking the rules, and freeing people to design their own work environments. IDEO's focus on teamwork generates countless breakthroughs, fueled by the constant give-and-take among people ready to share ideas and reap the benefits of the group process. IDEO has created an intense, quick-turnaround, brainstorm-and-build process dubbed "the Deep Dive." In entertaining

anecdotes, Kelley illustrates some of his firm's own successes (and joyful failures), as well as pioneering efforts at other leading companies. The book reveals how teams research and immerse themselves in every possible aspect of a new product or service, examining it from the perspective of clients, consumers, and other critical audiences. Kelley takes the reader through the IDEO problem-solving method:

- ” Carefully observing the behavior or "anthropology" of the people who will be using a product or service*
- ” Brainstorming with high-energy sessions focused on tangible results*
- ” Quickly prototyping ideas and designs at every step of the way*
- ” Cross-pollinating to find solutions from other fields*
- ” Taking risks, and failing your way to success*
- ” Building a "Greenhouse" for innovation*

A contemporary prose rendering of the great medieval French epic, The Song of Roland is as canonical and significant as the Anglo-Saxon Beowulf. It extols the chivalric ideals in the France of Charlemagne through the exploits of Charlemagne's nephew, the warrior Roland, who fights bravely to his death in a legendary battle. Against the bloody backdrop of the struggle between Christianity and Islam, The Song of Roland remains a vivid portrayal of medieval life, knightly adventure, and feudal politics. The first great literary works of a culture are its epic chronicles, those that create simple hero-figures about whom the imagination of a nation can

crystallize, observed V. S. Pritchett. The Song of Roland is animated by the crusading spirit and fortified by national and religious propaganda. This edition features W. S. Merwin's glowing, lyrical translation. This book is a study of cold war agenda setting in relation to the Julius and Ethel Rosenberg spy case. Its primary interest is with press coverage of the case from 1950 to 1953, although the historical focus of the case extends before and beyond those years. The purpose of the book is not to debate the Rosenbergs' guilt or innocence, but rather to provide a fresh view of the case in its most political terms: news coverage filtered through the dynamics of cold war patriotism. A large sample of U.S. and foreign newspapers and magazines was monitored to determine if the Rosenbergs were victims of sensational pretrial and during-trial newspaper publicity. Neville also determines if the press reported on the claims of a U.S. left-wing newspaper, the National Guardian, that the Rosenbergs were framed by the U.S. government with the complicity of the news media. His conclusions question whether the mainstream press and news media ignore issues of justice for radicals in time of war and political crisis. Tells the story of the history-making meeting between scorned master composer Johann Sebastian Bach and Prussia's Frederick the Great. Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding, large-magnitude earthquakes, volcanic

landscapes, petroliferous foreland basins, historical civilizations as well as geologic outcrops that display the protracted and complex 540 m.y. stratigraphic record of Earth's Phanerozoic Era. Emerged from the birth and demise of the Paleo-Tethys and Neo-Tethys oceans, southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia-Arabia continental plates. The region is characterized by the high plateaus of Iran and Anatolia fringed by the lofty ranges of Zagros, Alborz, Caucasus, Taurus, and Pontic mountains; the region also includes the strategic marine domains of the Persian Gulf, Gulf of Oman, Caspian, and Mediterranean. This 19-chapter volume, published in honor of Manuel Berberian, a preeminent geologist from the region, brings together a wealth of new data, analyses, and frontier research on the geologic evolution, collisional tectonics, active deformation, and historical and modern seismicity of key areas in southwest Asia. Eco's treatment demonstrates his mastery of the field of semiotics. It focuses on the twin problems of the doctrine of signs—communication and signification—and offers a highly original theory of sign production, including a carefully wrought typology of signs and modes of production. The Nature of Photographs is an essential primer of how to look at and understand photographs, by one of the world's most influential photographers, Stephen Shore. In this book, Shore explores ways of understanding photographs from all periods and all types - from iconic images to found photographs, from negatives to digital files. This book serves as an indispensable tool for students, teachers and everyone who wants to take better pictures or learn to look at them in a more informed way. We know that our gas-guzzling cars are warming the planet, the pesticides and fertilizers from farms are turning rivers toxic, and the earth has run out of space for the mountains of unrecycled waste our daily consumption has left in its wake. We've heard copious accounts of our impact—as humans, as a society—on the natural world. But this is not a one-sided relationship. Lost in these dire and scolding accounts has been the impact on us and our well-being. You sense it while walking on a sandy beach, or in a wild, woody forest, or when you catch sight of wildlife, or even while gardening in your backyard.

*Could it be that the natural environment is an essential part of our happiness? Yes, says Eric Lambin emphatically in *An Ecology of Happiness*. Using a very different strategy in addressing environmental concerns, he asks us to consider that there may be no better reason to value and protect the health of the planet than for our own personal well-being. In this clever and wide-ranging work, Lambin draws on new scientific evidence in the fields of geography, political ecology, environmental psychology, urban studies, and disease ecology, among others, to answer such questions as: To what extent do we need nature for our well-being? How does environmental degradation affect our happiness? What can be done to protect the environment and increase our well-being at the same time? Drawing on case studies from Asia, Africa, Europe, and North America, Lambin makes a persuasive case for the strong link between healthy ecosystems and happy humans. Unique in its scope and evenhanded synthesis of research from many fields, *An Ecology of Happiness* offers a compelling human-centered argument that is impossible to overlook when we marvel at murmurations of starlings or seek out the most brilliant fall foliage: nature makes our steps a little lighter and our eyes a little brighter. What better reason to protect an ecosystem or save a species than for our own pleasure? From #1 New York Times bestselling author Kresley Cole comes a*

This newly-edited 2007 edition of The Winter's Tale comes with a detailed introduction and full commentary. Can national minorities participation in decision-making processes be achieved in any constitutional context ? Can developing international standards assist governments in devising national policies? What are the challenges if states are to use cultural autonomy to improve minority participation? This publication presents The UniDem Seminar on The participation of minorities in public life, which took place in Zagreb on 18 and 19 May 2007, discussed ways of answering these topical questions. This publication contains the reports presented and discussed at the UniDem Seminar

organized by the European Commission for Democracy through law (the Venice Commission), under the patronage of the President of the Republic of Croatia and in cooperation with the Ministry of Foreign Affairs and European Integration of the Republic of Croatia, the University of Zagreb and the University of Glasgow. The children of the forest live deep in the roots of an old pine tree. They collect wild mushrooms and blueberries and shelter under toadstools when it rains. They play with the squirrels and frogs, and when fall comes, they collect and prepare food to see them through the long winter, until the warm spring breeze starts to blow. A mini gift edition of Elsa Beskow's classic story. "In American Chestnut, Susan Freinkel tells the dramatic story of the stubborn band of optimists who have refused to let this cultural icon go. In a compelling weave of history, science, and personal observation, Freinkel relates their quest to save the tree through methods that range from classical plant breeding to cutting-edge gene technology. But the heart of her story is the cast of unconventional characters who have fought for a century to bring the tree back, undeterred by setbacks or skeptics, fueled by their dreams of restored forests and their powerful affinity for a fellow species. Their efforts offer hope and inspiration in an era in which a plant or animal species passes into oblivion every twenty minutes."--BOOK JACKET. Creativity in Context is an update of The Social

Psychology of Creativity, a classic text for researchers, students, and other interested readers. Creativity in Context incorporates extensive new material, going far beyond the original to provide a comprehensive picture of how the motivation for creative behavior, and creativity itself, can be influenced by the social environment. Each number contains the proceedings of a particular meeting, conference, symposium, etc., sponsored by the Institution of Electrical Engineers in association with others. The Children's Health Act mandated the National Children's Study (NCS) in 2000 with one of its purposes being to authorize the National Institute of Child Health and Human Development (NICHD) to study the environmental influences (including physical, chemical, biological, and psychosocial) on children's health and development. The NCS examines all aspects of the environment including air, water, diet, noise, family dynamics, and genetics, on the growth, development, and health of children across the United States, for a period of 21 years. The purpose of NCS is to improve the health and well-being of children and to contribute to understanding the role of these factors on health and disease. The research plan for the NCS was developed from 2005 to 2007 in collaboration among the Interagency Coordinating Committee, the NCS Advisory Committee, the NCS Program Office, Westat, the Vanguard Center principal investigators, and federal scientists. The current design of the study,

however, uses a separate pilot to assess quality of scientific output, logistics, and operations and a "Main Study" to examine exposure-outcome relationships. The NCS proposed the use of a multilayered cohort approach for the Main Study, which was one of the topics for discussion at the workshop that is the subject of this publication. In the fall of 2012, NICHD requested that the Committee on National Statistics (CNSTAT) of the NRC and the IOM convene a joint workshop, to be led by CNSTAT. The workshop was to focus on issues related to the overall design (including the framework for implementation) of the NCS. The committee was provided a background paper which it used to select the challenges that were discussed at the workshop. Design of the National Children's Study: A Workshop Summary presents an overview of the workshop held on January 11, 2013. The publication includes summaries of the four sessions of the workshop, a list of participants, and the agenda. "This is indeed true: if the saints and blessed collected here share one overarching characteristic it is to have put their love of God to work for their fellow men and women as they saw fit - through austerity of life, contemplative prayer, or myriad embodiments of what we would now call social work. They are holy examples to us because they lived and died for others, for us."--BOOK JACKET. Supplies consumers with vital information needed to judge the safety of a wide variety of food

additives, updating the reference to encompass the more than twelve thousand ingredients in new food products, and offers detailed explanations of food production technologies, safe storage procedures, and the new label regulations. Original. 15,000 first printing. This collection of letters chronicles the personal lives of founding father John Jay and his wife, Sarah Livingston Jay, in the tumultuous times during and after the American Revolution. The letters showcase Sarah as a devoted wife and mother, who welcomed friends and government officials into her home and helped further her husband's political career. Her intelligence, powers of observation, social skills, political savvy and more than competent management of family affairs, including finances, during her husband's frequent absences, are clearly reflected in her letters. The book includes essays on the Jay and Livingston families, family trees, a chronology of John Jay's life, and information about the character and appearance of both husband and wife. Importantly, there are bridges between the letters where necessary and essays on several topics--the mail, health and medicine, education, religion and slavery--which provide an 18th century context for the reader. The correspondence reveals the abiding love of husband and wife, their concern for their children, the dangers and difficulties of travel, descriptions of the lands they visited and events they witnessed, as well as a sense of the effort it took to

survive in the era even with the buffer of wealth. Illustrations include several portraits, the signatures of John and Sarah, the Jays' wax seal and a period map of New York Harbor. For the first time in one hardcover edition, here are three best-selling books by one of 20th century's greatest movie directors. Woody Allen is an American cultural icon -- funny, philosophical, and controversial in his work and personal life. In this side-splitting collection, containing Without Feathers, Getting Even, and Side Effects. the Academy Award-winning filmmaker explores subjects ranging from sleeplessness to the UFO menace. No Woolly fan will want to be without his hilarious ruminations on the moral and ethical predicaments of modern life. This book provides a challenging interpretation of the emergence of the common law in Anglo-Norman England, against the background of the general development of legal institutions in Europe. In a detailed discussion of the emergence of the central courts and the common law they administered, the author traces the rise of the writ system and the growth of the jury system in twelfth-century England. Professor van Caenegem attempts to explain why English law is so different from that on the Continent and why this divergence began in the twelfth century, arguing that chance and chronological accident played the major part and led to the paradox of a feudal law of continental origin becoming one of the most typical

manifestations of English life and thought. First published in 1973, The Birth of the English Common Law has come to enjoy classical status, and in a preface Professor van Caenegem discusses some recent developments in the study of English law under the Norman and earliest Angevin kings. The philosophy of perception is a microcosm of the metaphysics of mind. Its central problems—What is perception? What is the nature of perceptual consciousness? How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world?—are at the heart of metaphysics. Rather than try to cover all of the many strands in the philosophy of perception, this book focuses on a particular orthodoxy about the nature of visual perception. The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver. The orthodox view of perception is that it is a process whereby the brain, or a dedicated subsystem of the brain, builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors. Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject, there is a particular set of neurons whose activities are sufficient for the occurrence of that state. Some of the essays in this book defend the orthodoxy;

most criticize it; and some propose alternatives to it. Many of the essays are classics. Contributors G.E.M. Anscombe, Dana Ballard, Daniel Dennett, Fred Dretske, Jerry Fodor, H.P. Grice, David Marr, Maurice Merleau-Ponty, Zenon Pylyshyn, Paul Snowdon, and P.F. Strawson
