Both comprehensive and accessible, this is an ideal resource for anyone who plans to teach or practice integrated, cost-effective healthcare in the 21st century. • Explores the complexities of interprofessional teamwork and education, addressing both practice and teaching • Discusses how patients are affected by healthcare providers who do not function as a cohesive team and looks at the patient's role in teamwork • Offers a detailed model of interprofessional teamwork based on the authors' experience with a long-term, well-functioning interprofessional healthcare team • Uses illustrative narratives and case studies to provide examples of the concepts and principles presented • Includes a chapter based on interviews with patients and their caregivers to highlight experiences with functional and dysfunctional teams • Presents new topics, such as critical areas of practice (primary care, long-term care, and transitions of care); ethical issues in teamwork; educational theory; the use of narrative; and challenges in sustaining interprofessional education This book is the first one to examine stress in primary health care professionals in the UK - the professionals who are in the frontline of medical care in a rapidly changing society. It is a detailed literate review of stress in general and includes the results of studies on primary health care professionals. It contains extensive material from face-to-face interviews with each profession and practical advice on how they can manage stress. New Leadership for Today's Health Care Professionals: Cases and Concepts, Second Edition explores various components of the health care system and how leaders should respond in these arenas. The Second Edition is a thorough revision that offers a comprehensive view of the leadership competencies necessary to be successful in today's healthcare

industry. Each chapter is written by a leader in the healthcare industry under the guidance of the editors who have many years' experience in academia. This highly anticipated second edition features two all-new chapters, including *The Human Brain and Social Threat: Impact on Patients and Health Care Professionals* and *How Do I Know What Skill to Use?* Both chapters result from what the authors have learned from their interactions over the past six years with their students and health care professionals. The authors have applied motivational interviewing to the complex behavior change that is central to patients being able to manage chronic illnesses such as diabetes, high blood pressure, high cholesterol, and osteoporosis.. This book identifies critical interactional dynamics to assist health care providers (HCP's) in developing a conversational "flow" with the patient. How does empathic understanding create a relationship that allows patients to discuss barriers (and benefits) to managing their illnesses? How can the HCP guide patients to choices they can make to manage their illnesses? How do we encourage patients to talk about how they make sense of their illnesses and what is happening to them? Using MI will enable you to communicate with your patients in a clear, concise, and sensible way that helps open your patients to the possibility of behavior change. By using the tools and skills in this revised second edition, you can have a greater impact on improving your patient outcomes. Key Features: - Two new chapters address the human brain and social threat, and how to know what MI skills to use - Provides a practical, step-by-step approach to the use of MI skills and tools in all practice settings - Includes multiple dialogues between HCPs and patients to illustrate the use of MI skills and tools - Case studies vividly demonstrate the application of MI through extensive dialogues with video links - Review questions at the end of each chapter underscore key concepts This unique text explores health disparities in the United States and their implications from the perspective of a health care administration The book begins with a broad overview of health disparities including definitions from local, state, and federal legislation, as well as alternative definitions. The authors examine current and past frameworks of analysis regarding the causes of disparities and provide a statistical overview of death rates and their implications for health care administrators. In the final section of the book, each chapter looks at health disparities within each type of health care environment such as physician practices, hospitals, pharmaceutical products, Medicare/Medicaid, long-term care, insurance markets, and more. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Print+CourseSmart The Research Handbook for Health Care Professionals is the essential guide to the entire research process for students and practitioners alike. From conceiving an idea for a project to writing up the findings for publication, the book offers an overview of each stage plus hints and tips, recommendations for further reading and examples spanning a wide range of health professions. The book comprises three sections: Getting Started, Doing Your Research and Writing Up and Dissemination, and includes chapters on key topics such as formulating your research question, writing the initial research protocol, application for ethical approval, research governance, collecting your data, research methods and preparing a poster for a conference. A practical, introductory guide to the best use of Patient Reported Outcomes (PROs) to improve the quality of health care and patient health. Only title to exclusively introduce, explain and show how PROs can be best used to improve healthcare and patient outcomes Includes real life examples and case studies of PROs in practice Assesses the growing evidence base for PROs in practice Editor team from Office of Health Economics (OHE), The King's Fund and King's College London with contributions from practising clinicians, GPs and other healthcare professionals *Global Health and Volunteering: A Guide for Healthcare Professionals* is designed to educate volunteers to be effective partners in delivering medical services locally and globally. Healthcare professionals are increasingly interested in global health and volunteering in areas of acute need. The biggest challenge to health in many locales is the inability to access the health care system. When people do connect with medical services, medications and surgical opportunities for chronic disease (i.e. glaucoma, diabetes, or hypertension) are often not affordable or cannot be sustained for a long period of time. The contributions in this book focus on a respectful dialog with local people and a willingness to learn from new experiences

on the part of the volunteer. Skills transfer from visiting personnel to local providers is featured as a means to enhance healthcare sustainability. An appreciation of differing cultures, an understanding of the local economic conditions and challenges, and strategies for collaborating with the existing medical establishment are foundations of successful volunteer experiences as highlighted in this book. Dimensions of global health such as professionalism, religious beliefs, ethical dilemmas, traditional medicine, and alternative strategies for service are addressed by experts. Written and edited by leaders in the field, many of whom have more than two decades of experience volunteering abroad, *Global Health and Volunteering: A Guide for Healthcare Professionals* imparts lessons learned to help the reader avoid initial mistakes, while making the global health commitment stronger. Mario Santos is a brown-faced Huck Finn on the banks of his Mississippi, the Chama River. He is Holden Caulfield out of the "gray" city and atop the beautiful mountains of Northern New Mexico, under the influence of a Pentecostal camp meeting; MacCauley Caulkin "Home Alone" and ankle deep in Tabernacle sawdust. Our ten-year old hero asks the hard spiritual questions of existence through a courageous and reckless abandon of convention, and an ADHD passion for adventure. He obliterates religious pomposity and sanctimonious boundaries with his natural discernment of Christian character and religious characters and cuts to the guts of hypocrisy like he's cleaning a freshly caught German Brown' trout. Mario Santos innocently introduces us to a God who might not be recognizable to those convinced of a sterile, stained-glass, Sundays-only deity of cushioned pews and hushed vaunted ceilings. Rolando Benavidez writes as colorful an auto biography as you will ever read, matching the wild wardrobe of a certain angel that keeps plucking Mario out of harm's way as only a supernatural Big Indian can. You'll wonder how the story can be true unless you've also experienced heroic, larger-than-life parents and a hilariously personal God. You don't have to be in the patched-up shoes of a Spanish-speaking, brown-skinned Pentecostal preacher's kid to enjoy *Chama Stories*, Mario Santos has got that covered and good, as he invites us to hang on for an adventure we won't soon forget. *Chama Stories* is a page turning, laugh-out-loud finger-tip trip down the author's memory lane; a dusty lane, set in New Mexico's beautiful Chama Valley, rife with dirt and bumps and outhouses and overzealous deacons and witches and outrageous names and characters too many and funny to list. You'll laugh and cry and wonder why, and in the end you'll be looking for that camp meeting of your own. But be careful, you just might find it.

*Practical Diabetes Care for Healthcare Professionals, Second Edition*, helps healthcare professionals get up-to-speed on type 2 diabetes care. Type 2 diabetes is multifaceted, affecting a person's daily life, family and workplace. Beyond the usual health impact, diabetes may also carry significant psychological burdens. Successful care means whole [person] care which can be daunting for an individual healthcare provider. The complete assessment of people with diabetes must include a review of diabetes medications, blood glucose levels, nutritional intake, physical activity, and stress. Also important is a review of possible micro- and macrovascular complications. This practical guide translates research and evidence-based recommendations into everyday clinical practice, with the goal of helping all members of the healthcare team more effectively manage their diabetic patients. Provides detailed, real-life case scenarios that illustrate the principles outlined in each chapter Includes separate chapters for specific diabetes-related complications Devotes a new chapter to the concept of the Diabetes Health Care Team and its impact on diabetes care Expands on the importance of lifestyle approaches, including a key discussion on the emotional aspects of managing a long-term chronic disease Provides a comprehensive, yet succinct, review of diabetes that includes details on medication choice, dosages, advancements and technological accomplishments `This excellent, concise and even-handed book confronts the contradictions and dilemmas at the heart of today's NHS. The book is aimed at healthcare professionals and students of health policy, and covers its major themes over the past 60 years, with particular attention to Labour's policy agenda since 1997' - *Healthmatters*

*Health Policy for Health Care Professionals* is a contemporary guide to the health service, its origins and current agenda, which focuses on the challenges faced by health service workers in implementing government policy at local level. The book's aim is to help health care professionals make assessments of health policy by giving them an understanding of the

ideological basis of the British health care system and the challenges facing the modern National Health Service. Beginning with the development of the NHS and its place within the broader context of state welfare provision, the book looks at the options available to governments in formulating policy which responds to health needs. It examines the policies set by recent governments and the feasibility of achieving objectives set by the current NHS Plan. Looking to the future, the book also identifies key issues for health policy in the next decade. Recognizing the reality of working in today's NHS, the authors highlight the tension which often exists between the formation and implementation of health policy. The central concern of policy makers to act for the collective good frequently creates problems for practitioners trying to align services with individual patient need and choice. Health Policy for Health Care Professionals is an ideal text for anyone training for a career in the NHS and an excellent resource for qualified practitioners assessing and implementing policy. Promotes an interdisciplinary approach to the study of health communication According to the Joint Commission, over 75% of all serious medical errors in this country result from miscommunication. Based in these adverse realities and the author philosophy that communication is a clinical skill integral to effective health care delivery, this comprehensive text addresses the theories and abilities needed by all health care providers. The only text written specifically for students of nursing, medicine, physical therapy, pharmacy, dentistry, physician assistants and opticians, this book incorporates recommendations for specific multimedia, suggestions for class discussion and interactive case studies to provide a rich and multi-perspective learning experience for gaining optimal expertise in effective health communication The author underscores the importance of developing and maintaining successful relationships with patients, peers, and colleagues as a cornerstone of effective health care outcomes. With an emphasis on interactive learning, the text utilizes communication theories to analyze verbal and non-verbal behaviors in diverse health care contexts and assess which are more effective and why. Summaries at the end of each chapter discuss health communication outcomes. Chapters cover interpersonal and gendered communication, provider-patient communication, intercultural communication, organizational communication, team communication, malpractice, palliative care, end-of-life communication, and many other topics. Key Features: Fosters a patient-centered, interdisciplinary, multidimensional learning experience for health care students Recommends experiential learning using videos, films, and related discussion exercises Presents case study role-plays Provides companion case study resource to enhance learning objectives Self-Care for Allied Health Professionals brings together a collection of self-care strategies into one easy-to-read volume, supporting Allied Health Professionals to do the best for their patients by caring for themselves. The book offers information and practical strategies to look after your physical and emotional wellbeing at home and in the workplace, exploring topics such as sleep and food, resilience and meditation, stress, conflict and adversity. Written to be a flexible tool that can be read cover to cover or dipped in and out of as needed, it offers rapid response self-care strategies alongside more lasting changes, supporting practitioners to make small steps to build healthy habits for the future. Key features of this book include: -- A combination of quick response strategies, like a five-minute breathing exercise you can use before a difficult meeting, and opportunities for deeper work, examining your purpose and aligning your role with your values. -- Combines ancient practices of meditation and mindfulness with the latest research on nutrition, exercise, sleep and wellbeing. -- Consideration of the challenges professionals face in the context of pandemics and a changing health and social care landscape, helping you to thrive in a challenging world. Self-care has never been more important. This is a book that every Allied Health Professional and trainee should have on their desk, to improve productivity, enhance job satisfaction and build resilience for whatever the future brings. This resource present a novel, but simple approach to mastering elemental and basic conversational Spanish through incorporating a blend of English and Spanish. Through early introduction of 100 basic words and phrases through multiple drills and mastery of 200 key health-related words, health care professionals and students at all levels learn confidence in vital communications with their Spanish-speaking patients and clients. NLP (Neuro Linguistic Programming) is a recognised and

validated means of providing expert communication and personal effectiveness in both life and work contexts. It is well used in all contexts and is well established in the business world, but is yet to be widely used in health care practice (although is gaining ground in terms of improving health of individuals). This book provides an accessible introduction to NLP for healthcare professionals. Breaking down any complicated terminology, it gives practical applications of all commonly used NLP tools, demonstrating their value and inspiring readers to apply them in their day-to-day work. Demonstrates NLP and coaching can be used in healthcare by practitioners to enhance their own practice, the service delivered by the team and improve patient care Highlights effective tools in coaching to make a difference in practice Demonstrates the value of self development through coaching to individuals in health care It is written as a practical tool kit, making development effective, accessible and fun Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. An introductory computer literacy text for nurses and other healthcare students, *Introduction to Computers for Healthcare Professionals* explains hardware, popular software programs, operating systems, and computer assisted communication. The Fifth Edition of this best-selling text has been revised and now includes content on on online storage, communication and online learning including info on PDA's, iPhones, IM, and other media formats, and another chapter on distance learning including video conferencing and streaming video. This short, easy-to-read book... has a great potential to improve the way clinicians understand the process of breaking bad news. -- *Annals of Internal Medicine* At last, we have a wise, useful, readable textbook on the communication of unpleasant information. -- *New England Journal of Medicine* The traditional pathophysiology book is written for the medical student. Nursing and allied health students (usually at the sophomore level) have simply had to make-do with cumbersome (1500 to 1600 page) books, that assume considerably more science background than the typical allied health student has acquired. The Nowak book is not only briefer (at 700 pages) but is organized in a manner that brings the principles of pathophysiology to the forefront. The authors focus on the relatively few patterns of disease, rather than asking students to memorize extensive catalogs of specific diseases. This conceptual approach is more suited to the allied health student than the disease centered approach featured in the major competitors. *HIPAA FOR HEALTH CARE PROFESSIONALS, 2nd Edition*, clearly explains the Health Insurance Portability and Accountability Act, including fundamentals, privacy, security, common myths, and the rule's extension to other laws. Offered in a flexible, easy-to-follow format, the text includes examples, real-life scenarios, self-test questions, and optional interactive features to help you engage with the material and prepare you for success in your chosen health care profession. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. This workbook provides over 2700 math questions for practice and mastery of the each of the objectives included in *Math for Health Care Professionals* and *Math for Health Care Professionals Quick Review*. The use of this workbook to enhance understanding of math concepts also helps the learner become more confident in his or her knowledge and skills. The workbook may be used by anyone wishing to sharpen their math skills. *Policy and Politics for Nurses and Other Health Professionals, Second Edition* focuses on the idea that all health care providers require a fundamental understanding of the health care system including but not limited to knowledge required to practice their discipline. The text discusses how health care professionals must also prepare themselves to engage in the economic, political and policy dimensions of health care. The Second Edition offers a nursing focus with an interdisciplinary approach intertwined to create an understanding of health care practice and policy. The text is enriched through the contributions from nurses and other health professionals including activists, politicians, and economists who comprehend the forces of healthcare in America how their impact on the everyday provider. The new edition features key updates on the current health care environment including the Affordable Care Act. The World Health Organization defines the social determinants of health as "the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life." These forces and systems include economic policies, development agendas, cultural and social

norms, social policies, and political systems. In an era of pronounced human migration, changing demographics, and growing financial gaps between rich and poor, a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative. Educating health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities, contributing to more effective strategies for improving health and health care for underserved individuals, communities, and populations. Recently, the National Academies of Sciences, Engineering, and Medicine convened a workshop to develop a high-level framework for such health professional education. A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework's use with the goal of helping stakeholder groups envision ways in which organizations, education, and communities can come together to address health inequalities. Ethics for Health Professionals provides a foundational understanding of ethics for healthcare students and clinicians. With a conversational tone and features within each chapter that add to its appeal including quotes, interesting facts, case studies, and more, this indispensable text offers an enjoyable, eased reading style while supplying information that can be practically and easily put into practice once the student enters the field. Many ideals can also be carried over to one's personal life in terms of ethical principles and decision making. Pedagogical features include chapter objectives, boxed articles, quotes, case studies, key terms, chapter summary, assessment review questions. Website links are also included for additional reference. Students will learn basic information while develop a meaningful understanding of ethics, its importance and application in the world of health sciences. CONTENTS \* Overview of the history of ethics \* Blanchard and Peale's 3-step model \* Ecological Model \* Approaches to ethics \* Applying ethics to the health care professional \* Patient Care Partnership \* Vulnerable Populations \* Confidentiality \* The Medical Record \* Patients' rights under HIPAA and privacy standards \* Ethics and the Workplace \* Liability and Health Care \* Matters of Life and Death Ethics for Health Professionals also covers additional contemporary topics in health care including: \* Integrity in Research (Including conflict of interest and Institutional Review Boards) \* Central Electronic Medical Record Registry \* Stem Cell Research \* Euthanasia, Abortion, Assisted Suicide \* How to Choose a Reliable Website for Information Gathering The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system. Personal and Professional Growth for Health Care Professionals blends aspects of professional development with issues related to personal development. Personal and professional development are inextricably linked because one cannot develop as a professional devoid of the personal insights related to personality, character, cognitions, emotions, and the cultural and generational constraints. Includes use of multi-stage model of professional development: perception, judgment, motivation, prioritization, decision process, and professional implementation. Offers Case Studies, Questions, and Issues for Discussion at the end of each chapter. This is an excellent resource to prepare students for career readiness. English for Healthcare Professionals part 1 covers the topics of Introduction to healthcare, The Body (anatomy terms and names of diseases and disorders) and Micro-organisms including Infection Control. The language studied is workplace specific and authentic language used when working in the hospital or healthcare environment. Upper

Intermediate Level. The only book of its kind in English, *Japanese for Healthcare Professionals* is a proficiency-based conversation textbook offering a complete Japanese language course that teaches Japanese grammar along with the vocabulary of medical care. With nearly three million Japanese tourists visiting the United States last year, and another five hundred thousand expatriates residing in the US and other English-speaking countries, it is inevitable that many Japanese speakers find themselves in need of healthcare but unable to communicate. Important highlights of this book are: Accompanying MP3 Audio Disc. No prior knowledge of Japanese necessary. For all professionals seeking to communicate in healthcare situations. Includes an English-Japanese dictionary of medical terms, a glossary of common complaints, and a sample bilingual medical questionnaire. *Japanese for Healthcare Professionals* offers a complete language course for classroom study or independent learners that teaches Japanese grammar along with the Japanese medical vocabulary. The chapters cover every step of a patient's interaction with care providers, from appointments and admissions to the physical examination, symptoms and illnesses, diagnosis, treatment, instructions to the patient, discharge, and follow-up. Chapters are devoted to the major branches of medicine as well as dentistry and to the corresponding bodily systems. There are also chapters on anatomy, infection and disease, and visits to the pharmacy. Each chapter follows a natural progression designed to help the learner comprehend the new material and acquire the language as effortlessly as possible. Each includes: basic Japanese vocabulary, a situational dialogue, Japanese grammar points and key Japanese language and culture notes, exercises and practice drills, and a quiz to sharpen comprehension. The culture and language notes seek to help the provider understand better a Japanese patient's cultural framework and patterns of belief, as well as the "un-translatable" meaning conveyed by certain idioms. The accompanying MP3 audio disc ties in core parts of each chapter, allowing learners to practice their spoken language skills outside a classroom setting. The book also includes thirty illustrations to help with vocabulary acquisition, a pronunciation guide, an English-Japanese dictionary of medical terms, a glossary of Japanese expressions for common complaints, a sample bilingual medical questionnaire, and answers to the quizzes. Emphasizing the learner's practical use of the Japanese language for healthcare settings and the importance of culture in understanding, *Japanese for Healthcare Professionals* reflects the national standards in foreign-language education set by the American Council on the Teaching of Foreign Languages (ACTFL). All disc content is alternatively accessible on [tuttlepublishing.com/downloadable-content](http://tuttlepublishing.com/downloadable-content). Medical care is an industry and private providers and hospitals are the major service providers. They operate on business principles. Hospitals are getting highly specialized and complex. The diagnostics and therapeutics are technology intensive. Private establishments have to compete with one another to remain in business. They strive to induct the best talent and latest technical know-how, resulting in ever-increasing costs to patients. Patients, who pay high charges, demand quality as a matter of right. To meet the challenge, hospitals are constrained to bring in professionalism in their systems and services. They appoint qualified professional managers to manage their clinics and hospitals with a view to sparing health professionals to focus on clinical care. Whether right or wrong, 'management' is often associated with authority and power. As a result, the medical professionals are reduced to secondary level in some organizations. To retain commanding positions in medical organizations, it has become necessary for the healthcare professionals to learn 'management', at least its basics. On the other hand, non-medical managers while managing healthcare services do not get the required cooperation from the medical professionals, as the latter are often secretive and not willing to share medical knowledge. If medical knowledge is demystified, non-medical managers can perform many functions in healthcare organizations proficiently. Both medical and non-medical managers can complement each other in providing quality healthcare services. The book aims to orient clinicians (including physicians and nurses) and other healthcare professionals on the essentials of business management and to familiarize them with management terms and jargon. They can learn to be effective managers besides being health professionals. Similarly, non-medical managers can get familiarized to nuances of clinical care and special managerial requirements of healthcare facilities. They all will be able to relate processes in

healthcare settings with the concepts of business management. They can develop expertise on patient relationship management

Now fully revised and in a second edition, *The Portable Ethicist for Mental Health Professionals* suggests solutions to the simple and complex ethical questions mental health professionals must deal with on a daily basis. This indispensable guide arms you with the expert knowledge you need to avoid an ethical violation or to handle the situation if a complaint is filed. Web copy, 5/14/08, RH Health Professionals' Education in the Age of Clinical Information Systems, Mobile Computing and Social Networks addresses the challenges posed by information and communication technology to health professionals' education, and the lessons learned from field experiences and research. This book is divided in three parts: "the changing landscape of information and communication technology in health care", in which it discusses how information and communication technology is transforming health care and the implications of these changes for health professions education; "experiences from the field", with real-life examples of health professionals' education in and for the digital era; and "evaluation of students and programs", addressing the use of technology to assess learners as well as the complexity of evaluating programs to enhance competence in an information technology-rich health care world

Written by leading researchers from different parts of the world, the book is a valuable source for educators and professionals who are active or wish to be part of the health informatics field. Brings an in-depth understanding and background on the challenges for education of the health professions brought by information and communication technology Provides real-life examples on how technology is used in healthcare and how it can be used in education Presents valuable information in a visually appealing format with tables and figures Religious beliefs and customs can significantly shape patients' and professionals' attitudes toward, and expectations of, healthcare, as well as their wishes and personal boundaries regarding such daily matters as dress, diet, prayer and touch. Undoubtedly, the sensitivity with which clinicians communicate with patients and make decisions regarding appropriate medical intervention can be greatly increased by an understanding of religious as well as other forms of cultural diversity. This second edition of a popular and established text offers healthcare students and professionals a clear and concise overview of health beliefs and practices in world religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, Sikhism, Islam, Judaism, and Christianity. Adopting a consistent structure, each chapter considers the demographic profile of the community, the religion's historical development, and key beliefs and practices, including views regarding health and sickness, death, and dying. Each chapter also ends with a useful checklist of advice on what to do and what to avoid, along with recommendations for further reading, both online and in print form. The book's clear and consistent style ensures that readers with little background knowledge can find the information they need and assimilate it easily. A brand new chapter on applications and a set of new case studies illustrating issues in clinical practice enhance this wide-ranging book's value to students and practitioners alike. Presents a guide to the aspects of the Spanish language most useful for professionals in the health care field that covers basic grammar and specialized vocabulary. The cultural groups discussed in this guide include African American, Anglo-American, Asian, Hispanic/Latino, Jewish, Middle Eastern, Native American, Russian, South Asian, and Southeast Asian. The book also discusses cultural patterns, including values, worldview and communication, time orientation, pain, family/gender issues, pregnancy and birth, children, end of life, and health beliefs and practices. The sections on health beliefs and practices are especially informative. This is a very handy pocket resource that broadly describes selected cultural groups. It includes a mnemonic (the 4 C's of Culture) to help healthcare professionals remember the questions to ask each patient: CALL (what do you call the problem?), CAUSE (what do you think caused the problem?), COPE (how do you cope with the problem?), and CONCERNS (what are your concerns?). This book should be required for all health professionals and students. This work, produced under the direction of the Royal Pharmaceutical Society of Great Britain, is intended to serve as a reference work for pharmacists, doctors and other health-care workers and to help them provide professional advice on the use of herbal remedies to members of the public.
