International in scope and covering all aspects of railway terminology, past and present, this fourth edition includes among much else proper names of trains, companies and manufacturers, and clarifies a profusion of abbreviations. The [ShipCraft] series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring colour profiles and highly-detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references [books, monographs, large-scale plans and relevant websites. The two German ships which form the subject of this volume were among the first products of rearmament under Hitler. For political reasons they were neither as large nor as well armed as foreign equivalents, but they were very fast, which led them to be described as [battlecruisers] in some quarters. They enjoyed an adventurous war, both surviving

heavy damage, before Scharnhorst was sunk in an epic gun battle off the North Cape, while Gneisenau succumbed to heavy air attack. "Per una volta, ladies and gentlemen, non allacciatevi le cinture. Don't fasten your seat belts. Si parte in treno, la Cenerentola dei trasporti. Si fa l'Italia in seconda classe, per linee dimenticate. Buttate dunque a mare duty free, gate, flight, hostess e check-in. Lasciate le salette business a parlamentari e commendatur. Questo è un viaggio hard, fatto di scambi, pulegge, turbocompressori e carbone. E noi lo faremo, anche a costo di farci sbattere da una squinternata vagona baldracca, un glorioso rudere che cigola e scoreggia sulla rete di ferro, in attesa di rottamazione. "In tasca, un'idea corsara. Percorrere 7480 chilometri, come la Transiberiana dagli Urali a Vladivostok. Una distanza leggendaria, un gomito lungo come l'Asia da srotolare dentro la Penisola. Non sappiamo ancora dove andremo e in quanto tempo consumeremo questo buono chilometrico che nessun biglietto può contenere. Sappiamo solo che il nostro è un conto alla rovescia che ci obbligherà a scendere al chilometro zero. Il treno, non l'aereo, ha fatto l'Italia. Un piccolo treno come questo che arranca tra praterie e fichi d'India. Siamo in ballo. Il viaggio comincia." WRLD FAST TRAIN -2EDALLEN The airbrush is an essential tool for modellers striving for professional-looking results. It can greatly enhance the quality of your modelling output, whether applying a full livery scheme or simply blending in areas of new paintwork. A good airbrush will offer unparalleled levels of finish and consistency, as well as the chance to create unique effects such as weathering and stencilling. This book reveals how anyone can use an airbrush effectively, provided that a few basic rules are followed. All of the necessary techniques are described, along with a wealth of practical guidance and detailed advice on choosing a spraying set-up to match your own needs and budget. Covers cleaning and maintaining the airbrush, 'tricks of the trade' and techniques suitable for a range of subjects, across each of the popular scales. reprint of a scarce 1896

collection of recipes of cocktails and drinks This book sets out to answer a wide range of modelers' 'how-to' questions. It begins by showing all the things that need to be done to build a first model. Paints, glues, knives and other basic tools are introduced. Then it moves on to the use of accessories - etched metal sets, turned metal gun barrels, and simple resin conversions. Here the more specialised tools, such as those made for work with etched metal, are discussed. The book includes sections covering working safely with resin, adding camouflage finishes by brush, spray can and airbrush, and ways of reproducing the German anti-magnetic Zimmerit finish that troubles many modellers. The various types of replacement tank tracks are shown with ways to build and paint them, and the different challenges of modeling wheeled vehicles are also addressed. The book continues with demonstrations of how to build a complex conversion or a complete resin kit as well as more simple scratchbuilding (working from raw materials rather than prefabricated kit parts). Researching and making decals for markings when there are no ready-made ones available, display bases and figures are also covered. Everything is straightforwardly explained and clearly illustrated by numerous photographs of steps in the various processes and of finished models. The T-55 tank first appeared in 1958, a result of numerous improvements made to the (1949) T-54 series, and with a lineage stretching back to the wartime T-34 and the T-44. The T-55 series has seen service around the world with many armed forces, including the Warsaw Pact countries, Afghanistan, Angola, Cambodia, China, Croatia, Egypt, Iran, North Korea, Poland, Somalia, Sudan, and Vietnam, and has seen action in key modern conflicts, most recently in the two Gulf Wars. This title showcases the talents of several leading modellers, and presents Serbian, Iraqi, Czech, Syrian, and Russian variants across 1/35 and 1/72 scales. It also features several challenging projects that involve extensive scratchbuilding. The T-34/76 was a major step forward in tank

design and its appearance on the battlefield during the German invasion of Russia shocked the Germans into developing new AFVs such as the Panzer V Panther. Produced in huge numbers, its later variant the T-34/85 would see extended postwar service with Communist-supplied countries around the world - such as the Arab countries, the North Korea, North Vietnam and China. With detailed step-by-step model photography, specially commissioned walkround photography, scale drawings and wartime shots, these books will provide all the details needed to model the main T-34 version - the Model 1943 - and its variants. There is a full roundup of the models available on the market, details of where you can see the real thing, a select bibliography, and survey of websites of interest. Use modules, linked dioramas, and stacking concepts to fit a model railroad into a small space. Color plans, layout specifications, and prototype background included. By Iain Rice. The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring colour profiles and highly-detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references books, monographs, large-scale plans and relevant websites. The five battleships of the class covered by this volume were the most modern British capital ships to serve in the Second World War. They were involved in many famous actions including the sinking of both Bismarck and Scharnhorst, while Prince of Wales suffered the unfortunate distinction of being the first

capital ship sunk at sea by air attack. This informative guide describes colors and markings for U.S. Army Air Force fighters in the European and Mediterranean theaters of WWII. With more than 300 illustrations and 140 photographs, the book makes an excellent reference for modelers and aviation buffs alike. The sugar-white sand of Pensacola Beach explodes with "Southern Lights" as descendants, perhaps of the ancient buccaneers, spread murder and mayhem while pursuing gold doubloons, as their ancestors once did, upon the Gulf of Mexico. As the beach murder rate doubles and quadruples, the sheriff of this peaceful community struggles to piece together and halt these strange occurrences amidst a cast of characters as fascinating and peculiar as the pure quartz sand of the beach itself. Donated by the estate of Dr. Donald S. Moore. Teaches how to make trains run. Easy-to-read explanations include layout wiring, command control, cab control, turnout control, and electrical troubleshooting. Includes photos, diagrams, and material lists for plans ranging from small modules to room-size layouts. From Model Railroader. Airbrushing Scale Model Aircraft is a practical guide to the application and techniques of painting aircraft in any scale. It provides guidance on buying airbrushing equipment, setting it up and operating it safely, and offers detailed explanations of how airbrushes and compressors work, alongside their various components. The reader is taken through basic exercises to learn how to control airbrushing equipment before moving on to more advanced paint application techniques. This book also includes guides to preparation, information on the use of primers, and a handy troubleshooting guide to help identify and resolve common faults. Richly illustrated and filled with step-by-step guides to paint application for model aircraft, this book is an essential reference and practical guide for anyone looking to airbrush model aircraft in any scale and will be of great interest to plastic modellers, particularly aviation, from beginner to experienced modeller. The iShipCraftÍ series provides in-depth

information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This is followed by an extensive photographic survey of selected high-quality models in a variety of scales, and the book concludes with a section on research references - books, monographs, large-scale plans and relevant websites. The subject of this volume is the seven-ship New Orleans class, probably the US Navy's most hard-fought heavy cruisers of the War - three were sunk in action but others survived massive damage, and by 1945 three out of four of the navy's most decorated ships were of this class. Although designed within treaty limitations, they proved powerful and well-balanced ships, and their unparalleled fighting record makes them popular modelling subjects. An Italian travelogue describes the trains that traverse the country, from the architecture of old train stations to the new high-speed railways, and portrays the author's memorable encounters along the way.
