The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 1 'Respiratory and Abdominal Systems', Station 3 'Cardiovascular and Neurological Systems' and Station 5 'Skin, Locomoter, Eyes and the Endocrine System'. The 200 cases have been written in accordance with the new

examining and marking schemes used for the exam. They provide an invaluable training and revision aid for all candidates. The MRCP Part 2 Examination is increasingly orientated around evidence-based medicine, up-to-date patient management and current guidelines. This is a move away from the esoteric questions seen in the past and it makes a more useful exam. This book combines the three sections of the exam; case histories, data interpretations and photographic material, to give candidates all round practice. Annotation Students sitting the MRCP examination You can't pass the MRCP without knowing a good deal of medicine. But, there are two main problems with learning medicine: there is a vast amount to learn and much of it is terribly dull. Most texts designed to help aspiring students adhere to this philosophy of dullness. This Book Is Different Every piece of educational theory available has been applied to make the learning experience as easy as possible: there are charts and tables, pictures and puzzles, limericks and poems, and even word searches - all complemented by a clear text. The authors are well trained in medicine. They are also old hands at the MRCP - in some cases, enjoying it so much that they had several goes at all. The results of their hard work? This book - the first structured course in not just what to learn, but how to learn it. "MRCP Part 1 Self-Assessment" is the perfect revision aid. Drawn from the highly successful Medical Masterclass material from the Royal

College of Physicians of London, this concise volume is specifically designed to cover the topics and format found in the Membership to the Royal College of Physicians (MRCP) Part 1 examination. The large scale, lavishly illustrated, full-colour format makes it easy to comprehend complex topics. With contributions from an extensive list of prestigious and authoritative professionals, the questions cover all areas of assessment, including the scientific background the medicine, general clinical skills, acute medicine and a range of specialties. It is ideal for examination MRCP candidates, doctors preparing for the European Diploma in internal medicine and junior doctors wanting to revise their knowledge and skills.'This collection of self-assessment questions and explanatory answers has been drawn from Medical Masterclass, which is produced and published by the Royal College of Physicians of London. The questions have been specifically written to help doctors in their first few years of training to test and revise their medical knowledge and skills; and in particular to pass postgraduate examinations, such as the MRCP(UK)' - John D Firth, in the Introduction. This book serves as a concise revision aid for the case histories section of the written paper for Part 2 of the MRCP examination. The book assists candidates in developing the necessary speed, thoroughness and accuracy in applying clinical examination and diagnosis in the exam setting. This book should be of interest to MRCP candidates, and

postgraduate physicians. This book is directed towards post-graduates who have passed Part I of the examination for Membership of the Royal College of Physicians and are preparing for Part II. However, it is hoped that physicians at all stages of their careers will find some parts that interest them. Most of the material has appeared in the Hospital Update series, 'Preparation for MRCP', but this has been modified and expanded; many useful points arising from correspondence relating to the series have been included, and the authors would like to express their thanks to those who have written. It is not intended that this should be used as a work of reference, although there is detailed discussion of some subjects. Only the written part of the examination is dealt with in detail, but the introduction contains hints on tackling the clinical sections which the authors hope the candidates will find valuable. There is, however, no substitute for clinical practice under supervision. The questions in VII PREFACE the written section of the examination require short answers so that marking may be easy and objective. This book contains questions similar to those that may be encountered in the examination, but the answers have been expanded as a basis for discussion. It is hoped that this will encourage the candidate to read around the subjects covered, and the authors recommend that the questions are used as a basis for group discussion, as answers other than those in the text may be considered. The first edition of An Aid to

the MRCP Short Cases rapidly established itself as a classic and has sold over 25,000 copies. The aims of this revised and extended second edition are the same as those of the first: to provide a comprehensive guide for those preparing for the short cases section of the Membership of the Royal College of Physicians examination. The MRCP examination is a major hurdle for all trainee hospital physicians and has a failure rate of over 70%. The largest part of the book consists of 200 short cases that are presented in order of frequency of their occurrence in the examination (based on an extensive survey of successful candidates). The clinical features of each case are fully covered and supported by illustrations and photographs. The emphasis throughout the book is on examination technique and how to present the clinical information in the style that the examiners expect. In short, it is an indispensable guide for anyone preparing for this critical examination. This book is the essential revision guide for neurology in the Membership of the Royal College of Physicians (MRCP). Neurology has been rated as the most difficult subject in MRCP examinations and there has been no concise and easy-to-use revision guide to help candidates through the exams until now. Neurology for MRCP is written by two experienced neurologists who have taught both the written (Part 1 and Part 2) and clinical (PACES) sections of the exam. This pioneering new book will also be useful for medical students sitting for their final examinations and for

doctors who are preparing for the PLAB examination. This work is structured around the actual PACES stations 1 to 5. This new edition of *An Aid to the MRCP Paces Volume 2: Stations 2 and 4* has been fully revised and updated, and reflects feedback from PACES candidates as to which cases frequently appear in each station. The cases and scenarios have been written in accordance with the latest examining and marking schemes used for the exam providing an invaluable training and revision aid for all MRCP PACES candidates. *MRCP PART 1: 400 BOFs, Second Edition*, offers a wealth of practice questions covering the full range of topics tested in the MRCP Part 1 exam. Presented in a clear layout, chapters mirror the MRCP Part 1 syllabus to enable structured revision in each clinical specialty. Featuring fully descriptive answers and extensive referencing, this book provides the essential revision tool to maximise chances of exam success. With over 10% new practice material, including a new section on geriatric medicine in line with recent changes to the MRCP Part 1 syllabus, *MRCP PART 1: 400 BOFs 2nd Edition* remains the go to resource for all candidates taking the MRCP Part 1 written exam. 400 BOFs, reflecting the breadth of topics encountered in the actual exam New section on geriatric medicine to reflect recent changes to the MRCP Part 1 exam syllabus Practical advice on how to approach revision and useful tips to improve exam technique First edition published March 2013

(9781907816444) Amazon reviews of the first edition: Very good book, really useful A valuable read during my preparation for MRCP part 1. It has a good range of topics pitched at a medium to hard difficulty level...Recommended. "MRCP Part 2 Self-Assessment" is the perfect revision aid. Drawn from the highly successful Medical Masterclass material from the Royal College of Physicians of London, this concise volume is specifically designed to cover the topics and format found in the Membership to the Royal College of Physicians (MRCP) Part 1 examination. The large scale, lavishly illustrated, full-colour format makes it easy to comprehend complex topics. With contributions from an extensive list of prestigious and authoritative professionals, the questions cover all areas of assessment, including the scientific background the medicine, general clinical skills, acute medicine and a range of specialties. It is ideal for examination MRCP candidates, doctors preparing for the European Diploma in internal medicine and junior doctors wanting to revise their knowledge and skills. This collection of self-assessment questions and explanatory answers has been drawn from Medical Masterclass, which is produced and published by the Royal College of Physicians of London. The questions have been specifically written to help doctors in their first few years of training to test and revise their medical knowledge and skills; and in particular to pass postgraduate examinations, such as the

MRCP(UK)' - John D Firth, in the Introduction. This new edition is completely in the Best of Five format to be relevant to the current Part 1 examinations. Chapters are by subject areas following the MRCP Part 1 syllabus. The questions have excellent clinical scenarios and the answers have topic summaries to aid revision in the specific subject areas. Taking a patient's medical history is a vital skill often overlooked by junior doctors and medical students, leading to a worryingly high failure rate in the PACES and OSCE exams. Don't be caught out! This book has been specifically designed to give you invaluable guidance and practice for taking medical histories. It features 50 complete case studies, including referral letters, medical histories, suggested data gathering methods, points to consider, warning signs, management of uncomfortable topics and differential diagnosis. With a focus on the importance and benefits of role-play in revision, this concise and easy to read format provides the study aid for Membership of the Royal College of Physicians (MRCP) candidates sitting their Objective Structured Clinical Examination (OSCE) and Practical Assessment of Clinical Examination Skills (PACES) examinations. It is also of great benefit to undergraduates approaching their final year examinations. MRCP PART 1: 400 BOFs offers a wealth of practice questions covering a wide range of topics for trainees preparing for the MRCP Part 1 exam. Presented in a clear layout, chapters are mapped

to the syllabus to deliver structured revision in each clinical specialty. Featuring fully descriptive answers and extensive referencing, this book provides the essential revision tool to maximise chances of exam success. Key Points 400 Best of Five questions reflect the breadth of topics encountered in the actual exam Practical advice on how to approach revision and useful tips to improve exam technique Answers feature concise case-based descriptions to consolidate knowledge Answers illustrated to improve understanding of key concepts Complements MRCP Part 2: 450 BOFs and MRCP PACES: 250 Clinical Scenarios – the complete MRCP revision package Medicine for MRCP provides a comprehensive review of the material that you need to pass the MRCP Parts 1 and 2 written papers. The twenty-seven chapters mapped out to the RCP syllabus, cover all areas from molecular medicine and genetics, through to medical law and ethics. Written by specialist contributors and educational experts, the content is carefully crafted to build your understanding for both papers. Each chapter begins with the basic science required for Part 1, before covering clinical medicine for Part 1, Part 2 and the PACES examinations. To ensure effective revision, material is presented in short sections with bullet lists, tables, and boxes. Over 150 drawings and photos illustrate key principles and clinical topics making them easier to retain. References to evidence-based protocols and directions to further reading allow for deeper

understanding. Candidates can review their progress via the 180 end-of chapter self-assessment questions. Drawing on the authors' expertise, *Medicine for MRCP* is the ideal companion for the MRCP as well as a useful reference guide for practicing medical doctors. Covers MRCP Part 2 syllabus and offers candidates essential practise at popular questions for the Part 2 examination. This title also covers cardiology, dermatology, endocrinology & metabolism, gastroenterology, haematology, infectious diseases, neurology, ophthalmology, psychiatry, renal medicine, respiratory medicine, and rheumatology. Reflecting the latest exam developments and covering the entire syllabus, this book focuses on providing complete revision coverage for the PACES exam. It is divided into five easy-to-use chapters, each representing a station from the exam, and integrates both the clinical and non-clinical aspects of the exam. It presents a wide range of commonly asked stations with detailed information laid out in a clear, concise manner, aided by photographs and diagrams. Through repetition and association, as well as through revision mnemonics enables you to remember complex information through recalling simple phrases - making it an ideal method for learning in medicine and other complex sciences. This title presents phrases in subject chapters for targeted learning. For the MRCP Part 2 exam, candidates need to be able to interpret radiological images of commonly encountered conditions. They also

increasingly need to be able to answer other questions about the condition shown in the image, for example treatment and prognosis. This book has been designed to meet that need. It is divided into five sections: chest, abdomen, nervous system, cardiovascular system and musculoskeletal system. Each condition described is illustrated by one or two high quality radiological images and then provides a concise but holistic view of the condition, with all the important aspects of disease that the candidate will be expected to know. This information is supplemented by a short series of example exam questions. This text contains essential information for candidates taking medical examinations at all levels, from undergraduate to MRCP and beyond. It covers all aspects of statistical methodology commonly tested in medical examinations, without assuming previous knowledge of statistics. Important concepts are summarized throughout the book and situations in which they can be applied are described. The book also contains multiple-choice questions and advice on tackling critical reading questions. Magnetic resonance cholangiopancreatography (MRCP) is a novel non-invasive technique for diagnosis of pancreatic-biliary disease. The purpose of this book is to highlight the advantages, limitations and indications of MRCP. Specific examples have been selected to showcase the utility of this technique in a large variety of clinical conditions. Each example is purposefully used to stress important technical features, to

give practical advice, or to discuss the role of MRCP in specific clinical situations. Important features of the book are the high quality of the illustrations, the reduction of the text to relevant and practically useful issues, and the simple and logic organisation of the case material. The book should show: the optimal technique in MRCP, the pitfalls and limitations. The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment – history-taking, examination and communication skills – equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, ‘Heart failure’ is a not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient’s life. This

3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam – respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case – excellent preparation for the exam Boxed tips highlight vital information – helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam This textbook is an essential revision aid for trainees preparing for Membership of the Royal College of Physicians (MRCP) examinations. Divided into 30 sections, the book begins with discussion on common symptoms and

presentations, then emergency presentations. The following sections provide in depth coverage of the diagnosis and management of diseases and disorders in different body systems. The text concludes with chapters on geriatric medicine, genetics, epidemiology, clinical pharmacology, and ECG Interpretation. Treatment protocols are current and inline with the latest international guidelines. Each chapter is highly illustrated with images and figures, as well as teaching notes and easy-to-memorise lists to assist revision. Topics frequently encountered in examinations and key points are also highlighted. Key points Practical revision aid for trainees preparing for MRCP examinations Treatment protocols inline with current international guidelines Chapters highly illustrated with images and figures, and teaching notes to assist revision Highlights topics frequently encountered in examinations This book, based on the experience of a single large referral center, presents the characteristic findings obtained when using MR imaging and MR cholangiopancreatography (MRCP) to image the biliary tree and pancreatic ducts in a variety of disease settings. An introductory chapter is devoted to technical considerations, anatomy, and developmental anomalies. Subsequent chapters then present in detail the MR imaging and MRCP findings observed in choledocholithiasis, inflammatory and neoplastic disorders of the bile ducts, acute and chronic pancreatitis (according to etiology), and different pancreatic

neoplasms. Dynamic MRCP with secretin stimulation is also illustrated, documenting both normal and abnormal responses of the pancreatic duct system to secretin. Readers will find this book to be an excellent aid to the interpretation of MR imaging and MRCP findings in patients with biliary and pancreatic disease. ? This is a book of self-assessment questions based on the current medical literature, with full references to recent papers and full explanatory answers. The questions are based on research papers and reflect the increasing importance of basic science in clinical medicine. The book contains useful appendices to assist candidates in their exam preparation. For the Second Edition the format of the questions will be a mixture of true/false multiple-choice questions, best of five questions and viva-style questions, thus making the book suitable not just for the new format of the MRCP Part 1 exam but also for the PACES clinical exam. An outline format helps readers find information quickly. "Hints and Tips" boxes offer advice on how to remember key content. Features page tabs for quick navigation. A wealth of 2-color illustrations bring the material to life. Authored by house officers who have inside knowledge of exactly what information is needed on a day-to-day basis. This book serves as a concise revision aid for the case histories section of the written paper for Part 2 of the MRCP examination. The book assists candidates in developing the necessary speed, thoroughness and accuracy in applying

clinical examination and diagnosis in the exam setting. Featuring a wealth of practice scenarios, MRCP PACES: 180 Clinical Cases enables trainees to test themselves on everything they need to know to pass the PACES exam. The MRCP PACES examination is a rigorous assessment of the ability to diagnose and treat a wide variety of conditions. Candidates must have the capacity to recall knowledge immediately - identifying possibilities, narrowing their findings and making a correct analysis. This book offers an innovative approach to revision for candidates. It clearly presents a wide variety of conditions in pictorial format, prompting recall with both visual and verbal mnemonics. Each colour page offers a different condition and outlines only the details essential to diagnosis and treatment; a concise, refreshing approach to tackling the vast number of topics required. MRCP PACES is a challenging examination requiring in-depth clinical knowledge, excellent clinical skills and the ability to present each case concisely and coherently. This revision guide helps candidates achieve these aims; it is compact enough for bedside use and sufficiently comprehensive for self-study. The new edition follows the structure of the current PACES exam and has an expanded section on Station 5. As well as a wealth of up-to-date questions for practice, it includes extensive new clinical information on new therapies and details of the latest investigations and management options. Each chapter has been reviewed by senior

clinicians within the specialty. • Presents all seven stations in one book • Provides practical hints and tips for success at each station • Presents much more comprehensive information in a compact and accessible format than other books • Provides evidence-based information, guidelines and questions mapping onto the latest examination format. This book teaches the candidate not only how to pass the PACES exam, leading the reader through each case and exactly what is expected of them, but also provides a succinct yet detailed clinical handbook for support on medical wards. Following the super-success of their MRCP Part 2 volume, the authors adapt their special teaching skills to the needs of MRCP Part 1 and similar exams in internal medicine. The book consists of 360 Best of 5' multiple choice questions (1,800 clinical decision) reflecting the latest exam format. It covers all areas of clinical medicine needed by ex MRCP Part 2: 450 BOFs, Second Edition offers a comprehensive selection of practice questions for trainees preparing for the MRCP Part 2 exam. Chapters are arranged by specialty and the weighting of questions is proportional to the exam. Thoroughly updated and featuring a wealth of practice questions that will test your ability to apply clinical understanding and make clinical judgements, this book is an essential revision tool to maximise the chances of exam success. Key points Gives practical advice on how to approach revision and useful tips to help improve exam

technique Contains questions that accurately reflect the format and the range of difficulty in the exam Includes image interpretation questions in full colour The MRCP (PACES) is a challenging examination as it requires both in-depth knowledge and the ability to present the selected case concisely and coherently. This essential revision aid is designed to help candidates achieve both aims whilst simultaneously being compact enough for ward use, and comprehensive enough for self-study. The book incorporates the new Station 5 (brief clinical encounters), clinical information on the increasingly widespread use of biological therapies, a bank of clinical pictures, details of the latest investigations and management options, and questions reflecting both the standard and detail required for the exam and the new MRCP PACES marking structure. Each chapter has been reviewed by consultants within the specialty, many of whom are Royal College examiners. The cases, which mirror those most frequently encountered in the examination, are all set out in a standardised format, and include hints and tips as well as a summary of consolidated key learning points. Each case contains a section on presentation which will aid the candidate in perfecting this skill. Although most appropriate for MRCP (PACES) examination candidates, the book's clear structure and balance of detail and clarity make it useful reading for medical students and trainee physicians. It will also be an excellent resource for clinicians involved in teaching

students and doctors. 'The style is succinct, not minimalist but sufficient. The presentation is fresh and logical. The authors have done an outstanding job in introducing the setting for the PACES examination and the expectations of the examiners.' - from the Foreword by Bryan Williams

**An Aid to the MRCP PACES Volume 3: Station 5** is a brand new, fully updated edition of the best-selling PACES revision guide to address the newest Station, covering Integrated Clinical Assessment, with content guided by the experiences of PACES candidates. The cases and scenarios have been written in accordance with the latest examining and marking schemes used for the exam providing an invaluable training and revision aid for all MRCP PACES candidates. In order to fully support candidates taking the exam, this trilogy of best-selling revision aids is now presented as:

**An Aid to the MRCP PACES Volume 1: Stations 1 and 3, Fourth Edition 9780470655092**

**An Aid to the MRCP PACES Volume 2: Stations 2 and 4, Fourth Edition 9780470655184**

**An Aid to the MRCP PACES Volume 3: Station 5, Fourth Edition 9781118348055**

MRCP 1

New Multiple Choice 'Best of Five' Revision Book carefully reflects the content of the Royal College examination and the book accordingly reflects the new format of 'best of five' questions for the second paper of the actual Part 1 exam. - New best of five questions with expanded explanations - Subject based chapters reflecting the actual exam content to test your knowledge and highlight weak areas for further revision - Useful list of popular topics for the MRCP 1 exam - Checklist of vital topics for effective revision - Revision Index for easy access to specific topics This new edition of An Aid to the MRCP Paces Volume 1: Stations 1 and 3 has been fully revised and updated, and reflects feedback from PACES candidates as to which cases frequently appear in each station. The hundreds of cases have been written in accordance with the latest examining and marking schemes used for the exam and, together with exam hints, tips, routines and clinical checklists, provide an invaluable training and revision aid for all MRCP PACES candidates. A book of over 150 cases which mimic the style and approach of the MRCP PACES exam. The book will equip the candidate attempting to pass the MRCP examination, and will also provide an overview of evidence-based medicine for competency-based training. Allay your anxieties about the MRCP exams and increase your confidence with An Aid to the MRCP: Essential Lists, Facts and Mnemonics. In order to pass the MRCP exams you will need to learn a

large number of lists and key facts. This book provides the essential lists and facts you need to know together with memory aids to speed learning and recall. Armed with this knowledge you will be able to rapidly narrow your differential diagnosis and identify the most likely answer. This essential new MRCP title has been written by a recent candidate for the MRCP exams who used this technique to pass first time, in conjunction with Dr Bob Ryder, Dr Anne Freeman and Dr Mir Afzal; all established authorities in the MRCP field and authors of the two volumes of An Aid to the MRCP PACES. An Aid to the MRCP: Essential Lists, Facts and Mnemonics presents memory aids, facts and lists that are based on questions faced whilst revising for, or encountered during the MRCP exams and also features a free audio revision tool at [www.anaidtothemrcp.com](http://www.anaidtothemrcp.com) with a summary of the mnemonics contained in the book.
