This book is a result of the ISD'99, Eight International Conference on Information Systems Development-Methods and Tools, Theory, and Practice held August 11-13, 1999 in Boise, Idaho, USA. The purpose of this conference was to address the issues facing academia and industry when specifying, developing, managing, and improving information systems. ISD'99 consisted not only of the technical program represented in these Proceedings, but also of plenary sessions on product support and content management systems for the Internet environment, workshop on a new paradigm for successful acquisition of information systems, and a panel discussion on current pedagogical issues in systems analysis and design. The selection of papers for ISD'99 was carried out by the International Program Committee. Papers presented during the conference and printed in this volume have been selected from submissions after formal double-blind reviewing process and have been revised by their authors based on the recommendations of reviewers. Papers were judged according to their originality, relevance, and presentation quality. All papers were judged purely on their own merits, independently of other submissions. We would like to thank the authors of papers accepted for ISD'99 who all made gallant efforts to provide us with electronic copies of their manuscripts conforming to common guidelines. We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions. We thank Daryl Jones, provost of Boise State University and William Lathen, dean, College of Business and Economics, for their support and encouragement. Covers trends in consulting in such fields as marketing, information technology, management, logistics, supply chain, manufacturing and health care. Towards Intelligent Manufacturing Systems This book contains the selected articles from the third International Conference on Information Technology for Balanced Automation Systems in Manufacturing. A rapid evolution in a number of areas leading to Intelligent Manufacturing Systems has been observed in recent years. Significant efforts are being spent on this research area, namely in terms of international cooperative projects, like the IMS initiative, the USA NIIP (National Industrial Information Infrastructure Protocols) project, or the European ESPRIT programme, and a growing number of conferences and workshops. The importance of the Information and Communication Technologies in the manufacturing area is well established today. The proper combination of these areas with the socio-organizational issues, supported by intelligent tools, is however, more difficult to achieve, and fully justifies the need for the BASYS conference and the publication of the series of books on Balanced Automation Systems. The first book of this series focused on the topic of "Architectures and Design Methods", was published in 1995. Many of the fundamental aspects of manufacturing, and some preliminary results were presented in this book. Among others, the topics included: Modeling and design of FMS, Enterprise modeling and organization, Decision support systems in manufacturing, Anthropocentric systems, CAE/CAD/CAM integration, Scheduling systems, Extended enterprises, Multi agent system architecture, Balanced flexibility, Intelligent supervision systems, Shop-floor control, and Computer aided process planning. Plunkett's InfoTech Industry Almanac presents a complete analysis of the technology business, including the convergence of hardware, software, entertainment and telecommunications. This market research tool includes our analysis of the major trends affecting the industry, from the rebound of the global PC and server market, to consumer and enterprise software, to super computers, open systems such as Linux, web services and network equipment. The implementation of Enterprise Networks or e-Networking is of paramount importance for organisations. Enterprise-wide networking would warrant that the components of information architecture are organised to harness more out of the organisation's computing power on the desktop. This would also involve establishment of networks that link the various but important subsystems of the enterprise. Our firm belief is that in order to gain a competitive edge the organisations need knowledge and sound strategy. This conviction is particularly true today, considering the pressures from international competition, environmental concerns and complicated ethical issues. This book, entitled A Manager's Primer on e-Networking, negotiates the hyper dimensions of the Internet through stories from myriad of Web sites with its fluent presentation and simple but chronological organisation of topics highlighting numerous opportunities and providing a solid starting point not only for inexperienced entrepreneurs and managers but anyone interested in applying information technology in the business. I sincerely hope the book will help as well many small and medium size companies and organisations to launch corporate networking successfully in order to attain their strategic objectives. Rajiv Jayashankar, Ph. D. This module of the handbook concentrates on the integration and migration strategies and technologies. Topics include strategic issues in integration versus migration, Enterprise Application Integration (EAI), B2B integration, EAI/eAI platforms, data warehousing for integration, migration strategies and replacements with ERPs. The first hands-on guide to building Java enterprise applications, updated and expanded to cover all of J2EE's exciting new features Java has always been great when it came to creating Web applets, but, until now, it was hardly up to the task of building high-performance applications. Increased XML support, EJB 2.0, and a new APM, Java2 Enterprise Edition (J2EE), offer developers what they need to build powerful enterprise applications. This updated and expanded edition of the popular hands-on guide shows them how. It uses the examples of two large-scale enterprise applications--complete with source code--to show readers how to use J2EE's

various APIs together as well as with other technologies, such as CORBA, COM, Servlets, and Agents. The book also features substantially expanded coverage of Enterprise JavaBeans and tells how to get the most out of EJB 2.0 tools and products. Topics of special interest to Java developers include: building a Servlet search engine; creating online stores with Java Server Pages; using transactions with EJBs and JDBC to create N-Tier applications; and selecting the best middleware for your needs. This book is for practising professionals and academics working in urban planning and international development: international project staff, trainers, urban development researchers and teaching staff in universities and polytechnics. Solid Waste Management and Recycling is unique in that it: -utilizes an 'integrated solid waste management perspective' in its analysis; -provides embedded case study data; -deals with both formal and informal actors and institutional arrangements in solid waste management and recycling; -has chapters written by experts from the countries concerned (Kenya and India); -can be used in graduate-level courses in urban development, urban management and planning, and technical engineering courses for students, project staff, and technical students. A guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. The blue economy is a widely used concept in policy circles; however, people across a wide spectrum have a peripheral understanding of the phenomenon. At the moment, there are several conflicting understandings of the blue economy but no universally accepted definition and veritable measures. Considering the existential importance of the blue economy for the protection of marine environments and sustainability of businesses, there is an urgent need for rigorous conceptual, policy-focused, theoretical, and empirical studies on the subject from multidisciplinary perspectives. Implications for Entrepreneurship and Enterprise Development in the Blue Economy enriches existing definitions of a blue economy with inputs from a multidisciplinary lens and provides veritable measures for evaluating blue economy progression and compliance. Covering topics such as economics, natural resource development, social equity, and sustainability, this reference work is ideal for policymakers, entrepreneurs, managers, oceanographers, marine biologists, scholars, industry professionals, government officials, academicians, researchers, practitioners, instructors, and students.
