Essays on Husserl's Logic and Philosophy of
Mathematics Apr 22 2020 Essays on Husserl's
Logic and Philosophy of Mathematics sets out
to fill up a lacuna in the present research on
Husserl by presenting a precise account of
Husserl's work in the field of logic, of the
philosophy of logic and of the philosophy of
mathematics. The aim is to provide an in-depth
reconstruction and analysis of the discussion
between Husserl and his most important
interlocutors, and to clarify pivotal ideas of
Husserl's by considering their reception and
elaboration by some of his disciples and

followers, such as Oskar Becker and Jacob Klein, as well as their influence on some of the most significant logicians and mathematicians of the past century, such as Luitzen E. J. Brouwer, Rudolf Carnap, Kurt Gödel and Hermann Weyl. Most of the papers consider Husserl and another scholar – e.g. Leibniz, Kant, Bolzano, Brentano, Cantor, Frege – and trace out and contextualize lines of influence, points of contact, and points of disagreement. Each essay is written by an expert of the field, and the volume includes contributions both from the analytical tradition and from the phenomenological one.
