*ICO Hunter: How to Find Your Pathway Into the Jungle of Initial Coin Offering'* Sep 29 2022 The most interesting part with the Cryptocurrencies is the creation of a new category of business funding, which is the ICO - Initial Coin Offering. ICO has similarities with IPO - Initial Public Offering, but one huge difference: There is not a legal framework which a company has to follow for the ICO. That will definitely change in the future, but for now they are a lot of companies/scammers who are taking advantage of this gap and trying to make some money. Using fancy words for example Blockchain, public ledger, decentralized, Bitcoin etc..... they are in a position to rise millions of dollars, without the obligation to provide a product at the end. It is amazing how many companies are created in daily basis and trying to secure funding through ICO. They promise that they will solve one of our problems using Blockchain and in return they are giving us tokens for reward. Tokens which can worth 10 or 100 times more in a few years or nothing in a few months. They are excellent articles and books in the market, which explain the difference between utility and security tokens, which market you should invest (online storage, VR, real estate, financial transactions) or which characteristics you need to check to spot a scam ICO (white paper, development and engineering team, marketing, timeline, reputation). In this book I am presenting all the links, which can be used to spot a life time opportunity and can give you up to 10,000 returns of your initial investment. Have in mind that a lot of people are buying ICO due to the discount and then when the ICO hit the exchanges, they dump it as fast as possible. Also the majority of these ICO won't be there in the next 5 years. That does not necessary mean that all of them are scams. An ICO has a start-up company behind and a lot of things can go wrong for example bad management, delivery delays, lack of resources. Always play the long term game and it is better to invest in a few ICOs and wait, instead of just simple be part of the 'pump and dump' process (FYI: That is considered illegal in most countries, most likely you won't belong to the 'whales' group and you will lose money and fate into the crypto market).

*Invest Smarter in ICOs* Nov 19 2021 When people hear the words ICOs, Ripple, Bitcoin, Cryptocurrency, Bitcoin or Mining they immediately shout: Cryptocurrencies have no value, why should I pay for them? ICOs are all scams Ripple is overvalued Initial Coin Offerings are not legal You hear this at family tables, Christmas gatherings, club meetings and so much more. This is due to the fact, that the Blockchain and cryptocurrency discussion has emerged from specialized forums and not the broader public sphere. Shockingly there is very much superficial knowledge floating around. Not only between individuals but also poorly researched news articles which badly compare ICOs to IPOs. Initial Coin Offerings (ICO) are discussed everywhere. Yet much superficial knowledge is discussed. There is no good guide for what to look out for or how to participate in an ICO. Having researched the Blockchain Technology during my Ph.D. studies, I will introduce the ICO to you as well as present my opinion on its potential. In this book, we will start with looking at the high-level concept of cryptocurrencies with its two dominant players Bitcoin and Ether before diving into the Initial Coin Offerings (ICO) and a general market overview. Understanding the ICO Landscape is a cornerstone of your research into ICO investments. Having successfully laid the groundwork we will discuss the steps of an ICO investment, before reaching the core of your analysis - the evaluation of an ICO. Therefore, navigating the maze of substandard information and quality sources is your first task of your investment research. Certainly, it also begs the question - before even starting with your research - if this is a worthwhile endeavor or if the whole cryptocurrency and ICO scene will rapidly disappear. To answer this, let's first look at a few examples from the past. With the invention of the automobile, very little people initially thought that this stinking and loud vehicle would sometime replace the horse carriage. Now, look at today. What we can learn from this example is two-fold. First, innovations face a lot of criticism at first and are only adopted by a small enthusiastic group. So-called early adopters. Secondly, the first product (so-called Minimal Viable Product or MVP) usually isn't pretty. Yet, the car is widely used nowadays. This is due to the fact that the value of the innovation is long-term (fast transport from A to B) and the ecosystem (gas stations, paved roads) grew fast. Subsequently, we can see that the growth phase of innovations with so-called "network effects" is accompanied by a competition for standards. In our example the mixture of gas or in the example of the invention of electric light the war of currents between George Westinghouse's alternating current (known as AC) standard versus Thomas Alpha Edisons direct current (DC) standard. We can see the same pattern when it comes to the underlying technology of cryptocurrencies and tokens (e.g. ICOs). Now the question is if the use of the Blockchain

Technology can deliver long-term value and therefore can lead to a mass adoption. This question is inherently connected to the discussion of a society without paper money. Surely you will agree that the age of paper money is ending, as we mostly pay with credit cards and bank transfers. Now the question is if the costly institutions of this system can be replaced by this new decentralized network technology called Blockchain. These questions can only be answered by researching the underlying principles. In this book, I will guide you in understanding Blockchain and Initial Coin Offerings.

**Market Integration Through Data Protection** Aug 05 2020 In the context of the continuous advance of information technologies and biomedicine, and of the creation of economic blocs, this work analyzes the role that data protection plays in the integration of markets. It puts special emphasis on financial and insurance services. Further, it identifies the differences in the data protection systems of EU member states and examines the development of common standards and principles of data protection that could help build a data protection model for Mercosur. Divided into four parts, the book starts out with a discussion of the evolution of the right to privacy, focusing on the last few decades, and taking into account the development of new technologies. The second part discusses the interaction between data protection and specific industries that serve as case studies: insurance, banking and credit reporting. The focus of this part is on generalization and discrimination, adverse selection and the processing of sensitive and genetic data. The third part of the book presents an analysis of the legislation of three EU Member States (France, Italy and UK). Specific elements of analysis that are compared are the concepts of personal and anonymous data, data protection principles, the role of the data protection authorities, the role of the data protection officer, data subjects' rights, the processing of sensitive data, the processing of genetic data and the experience of the case studies in processing data. The book concludes with the proposal of a model for data protection that could be adopted by Mercosur, taking into account the different levels of data protection that exist in its member states.

*Create Your Own ICO in Ethereum Blockchain: How to Create, Verify and Market Your Altcoin* Apr 05 2023 . In this book I am going to present all the options I have used to create my own altcoins in Ethereum Blockchain. You don't need programming skills to create your own Altcoin and of course not a huge capital to spend for its creation. For most of my altcoins I spent an average \$ 2 to 3 to be confirmed on the Ethereum network for each one. Before you jump and create your altcoins, please think which are your motivations to create your own altcoin. We know that the majority of altcoins will fail the next 5 years and the most of the people know that. In my case I started out of curiosity and so far I have created around 12+ altcoins with exotic names such as Chocolate coin, Beer coin, Vodka coin.... I understand that people don't trust these coins, so you need to consider which is the value to your target group (and potential your clients). My altcoins can be easily replaced by Ethereum ( ETH) or Bitcoin (BTC), because BTC and ETH have established brand names, a team of engineers who are working in daily basis to improve its infrastructure and a huge community to support them. From the other hand look for example Dogecoin (DOGE): it started as a joke, it has unlimited supply and it is almost a replica of Bitcoin code. Despite these facts it has a huge supportive community and it is one of the top 50 cryptocurrencies in the market. From my perspective the community is the most important key element of the success of an altcoin. If you find a community to support your altcoin or a target group which you can provide a solution to them, you can have a successful ICO (Initial Coin Offering). Every day we hear in the news that startup companies issue ICO's and they manage to rise millions of dollars. Most of the time they offer tokens for a specific price (which is lower before they go public to a crypto exchange market) and the investor is betting on the fact that the price of the token will rise in the near future. This specific business model is amazing for fund rising as people from all over the world can buy tokens and offer capital to the company. People without investing account (for traditional stock market) can buy tokens or fragment of them (that is not possible for a normal stock from a company) with low capital and they can achieve ROI (Return of Investment) of 100 to 10,000%. I am not a financial advisor and please ask for a support of a certified financial advisor if you want to invest your capital in the cryptomarket, but I believe in the following 3 facts: 1. Cryptocurrencies are here to stay, same way as Internet came 25 years ago in our life 2. Not all Cryptocurrencies will survive the next 5 years 3. They are opportunities to expand your business with the Altcoin concept, if you are honest and you can provide a robust solution to your clients
