An updated look at global trade and why it remains as controversial as ever Free trade is always under attack,

more than ever in recent years. The imposition of numerous U.S. tariffs in 2018, and the retaliation those tariffs have drawn, has thrust trade issues to the top of the policy agenda. Critics contend that free trade brings economic pain, including plant closings and worker layoffs, and that trade agreements serve corporate interests, undercut domestic environmental regulations, and erode national sovereignty. Why are global trade and agreements such as the Trans-Pacific Partnership so controversial? Does free trade deserve its bad reputation? In *Free Trade under Fire*, Douglas Irwin sweeps aside the misconceptions that run rampant in the debate over trade and gives readers a clear understanding of the issues involved. In its fifth edition, the book has been updated to address the sweeping new policy developments under the Trump administration and the latest research on the impact of trade. *Friends or Foes? Now in its fifth edition, *Diffusion of Innovations* is a classic work on the spread of new ideas. In this renowned book, Everett M. Rogers, professor and chair of the Department of Communication & Journalism at the University of New Mexico, explains how new ideas spread via communication channels over time. Such innovations are initially perceived as uncertain and even risky. To overcome this uncertainty, most people seek out others like themselves who have already adopted the new idea. Thus the diffusion process consists of a few individuals who first adopt an innovation, then spread the word among their circle of acquaintances—a process which typically takes months or years. But there are exceptions: use of the Internet in the 1990s, for example, may have spread more rapidly than any other innovation in the history of humankind. Furthermore, the Internet is

changing the very nature of diffusion by decreasing the importance of physical distance between people. The fifth edition addresses the spread of the Internet, and how it has transformed the way human beings communicate and adopt new ideas. We also strongly believe the visual experience, while sometimes downplayed within the hectic and time-pressured environment of modern medicine, is critical to ideal education. Images can teach faster and with greater impact than many pages of text or hours of lecture. We continue our pursuit of these goals with a substantially updated, expanded, and improved fifth edition of The Atlas of Emergency Medicine. Nearly all of our changes and additions come from reader

Each volume of Golosa includes a main

textbook, a student workbook with laboratory drills and written exercises, and an audio program that runs approximately ten hours per volume and includes listening comprehension exercises, dialogs, conversations, and rapid-pace oral drills. Each unit in the program revolves around a topic (university, family, etc.), and follows the same basic format: introduction of basic vocabulary for the topic, listening to introductory conversations, short dialogs with activation exercises and role-play practice, practice in listening and reading with emphasis on strategies, grammar study and practice in both oral and written form, and written workbook exercises that go from mechanical to creative. NEW! Book I offers a CD-ROM with lexical and grammatical exercises for each unit! "... this manual does an excellent job of merging traditional and contemporary principles of neurotherapeutic intervention, all with a practical, functional orientation." -- Physical Therapy Care Reports, Vol. 2, No. 1, January 1999 Here's an integrated physical therapy model applicable to a variety of clinical problems and diagnoses. After exploring the application of treatment techniques, the authors focus on clinical decision-making strategies using clinical problems and progressively comprehensive case studies. "This text offers a wonderful source of ideas for developing laboratory experiences that will be directly applicable to clinical situations that our

students will face in their future practice." -- Mark W. Pape, MSPT, Angelo State University, San Angelo, Texas
