Consult this title on your favourite e-reader. Ophthalmology is a highly specialized field with complex conditions and a wide range of practitioners. This book provides an overview of clinical ophthalmology using the visually driven "mindmaps" format, a tool that summarizes topics with a logical pictorial structure to aid in memory retention. With Mindmaps in Ophthalmology, clinicians can obtain information quickly, following pathways in each subsection of a topic. They are able to select the levels at which the mindmap divisions remain relevant to them, while still maintaining an overall picture that is often lost in textbooks or atlases. The practitioner is always able to put history, examination, diagnosis, and treatment in context. Suitable for medical students, ophthalmology trainees, orthoptists, optometrists, general practitioners and other health professionals, this rapid revision tool is an ideal companion when used in conjunction with a textbook for further elaboration on topics. The new edition of this comprehensive textbook is a complete guide to the diagnosis and management of ocular disorders. The text has been reorganised into six key sections – Anatomy and Physiology, Optics and Refraction, Diseases of the Eye and Ocular Adnexa, Ocular Therapeutics, Systemic and Community Ophthalmology, and Practical Ophthalmology. The seventh edition has been fully revised with many new topics added to cover the latest advances in the field. Nearly 1000 clinical photographs, diagrams and tables further enhance the text. Key points Comprehensive guide to latest technological developments in ophthalmology Presents medical and surgical management of numerous ocular diseases and disorders Internationally recognised author and editor team, predominantly from Europe and the USA Includes nearly 400 full colour clinical photographs, diagrams and tables This book is designed to be a pictorial guide to ophthalmology and not a comprehensive textbook. It includes chapters on anatomy, physiology and optics to explain the simple elements of the basic sciences that are needed to understand ophthalmology. The section on examination describes the common investigations in an eye department in the hope that reports from ophthalmologists may become more easily understood. The clinical chapters represent 5 years of ophthalmic referrals to local family doctors in a part rural and part suburban area. This selection of eye disease therefore excludes some of the rare conditions, but includes those common problems that can worry not only the busy family doctor, but also the hard pressed medical student. 7 Anatomy and Physiology The sense of vision depends on the integrity of a set of Internal Eye anatomical and physiological factors, a study of which The eye consists of three concentric layers. The outer will simplify the understanding of ocular disease. Most fibrous sclera is opaque and accounts for five sixths of the globe. It is continued anteriorly into the External Eye transparent cornea. The middle vascular coat or uveal The eyeball lies in the anterior part of the orbit, which tract is made up of the choroid, ciliary body and iris. is approximately pyramidal in shape. The bony orbital The innermost layer is the light sensitive retina formed margin, which outlines the base of the pyramid, affords embryologically from the forebrain vesicle (Figure 3). This book is a practical and concise atlas on ocular anatomy, with an emphasis on applied aspects and hints for easy retention strategies. The vast color illustrations and photographs consist of self-explanatory, precise, and meaningful representations of the points covered in the text. Covering chapters such as bony socket of the eye, extraocular muscles, eyelids, cornea and lens, and neurology of the eye, Atlas of Ocular Anatomy gives a summary of the important and relevant points for each topic, separating out the essential from the nonessential elements. Complete with representative schematic line diagrams and full color photographs, this atlas features the correlation between anatomic facts with their probable clinical presentations in disease. Principles of Ophthalmology focuses on the anatomy, physiology, and diseases of the eyes. The book first offers information on the optical mechanism of the eyes, binocular vision, and examination of the eyes, including refractive errors, human binocular reflexes, and management of strabismus and heterophoria. The publication then examines the eyelids and lacrimal apparatus, exophthalmos and proptosis, and the conjunctiva. Topics include disorders of the lacrimal apparatus, abnormalities of the eyelids, lacrimal obstruction, orbital tumors, pseudotumor of the orbit, conjunctival involvement in skin diseases, and conjunctivitis. The text examines the cornea, sclera and episclera, lens, iris and ciliary body, and the vitreous body. Discussions focus on vitreous opacities, cataract, anterior uveitis, sensitivity of organisms to antibiotics administrable by subconjunctival injection, and inflammatory lesions of the cornea. The publication is a valuable source of data for ophthalmologists and readers interested in ophthalmology. A user-friendly reference to basic, foundational information on veterinary ophthalmology This book provides readers with a user-friendly manual to the basics of veterinary ophthalmology. It puts a focus on the most relevant information for clinical practice. Emphasizing canine ophthalmology, the book also covers the foundations of feline, equine, farm animal, and exotic animal ophthalmology.
