Hooyman and Kramer's starting point is that loss comes in many forms and can include not only suffering the death of a person one loves but also giving birth to a child with disabilities, living with chronic illness, or being abused, assaulted, or otherwise traumatized. They approach loss from the perspective of the resilience model, which acknowledges the capacity of people to integrate loss into their lives, and write sensitively about the role of age, race, culture, sexual orientation, gender, and spirituality in a person's response to loss. – from publisher information. Occupational therapy practitioners increasingly serve clients at critical times of transition as people experience planned and unplanned transitions throughout their lifespan. This comprehensive text is the first to offer an occupational therapy approach to clients' transition needs, from the neonatal intensive care unit and school to aging and end of life. Aligned with Occupational Therapy Practice Framework, this work explores the various transitions people experience and the ways in which occupational therapy can facilitate better intervention outcomes as clients face changes and challenges in their lives. From serious illness to natural disasters, humans turn to communication as a major source of strength to help us bounce back and to keep growing and thriving.

Communicating Hope and Resilience Across the Lifespan addresses the various ways in which communication plays an important role in fostering hope and resilience. Adopting a lifespan approach and offering a new framework to expand our understanding of the concepts of hope and resilience from a communication perspective, contributors highlight the variety of stressors that people may encounter in their lives. They examine connections between the cognitive dimensions of hope such as self-worth, self-efficacy, and creative problem solving. They look at the variety of messages that can facilitate or inhibit experiencing hope in relationships, groups, and organizations. Other contributors look at how communication that can build strengths, enhance preparation, and model successful adaptation to change has the potential to lessen the negative impact of stress, demonstrating resilience.
 As an important counterpoint to recent work focusing on what goes wrong in interpersonal relationships, communication that has the potential to uplift and facilitate responses to stressful circumstances is emphasized throughout this volume. By offering a detailed examination of how to communicate hope and resilience, this book presents practical lessons for individuals, marriages, families, relationship experts, as well as a variety of other practitioners. A comprehensive text for students in Family Nurse Practitioner and Adult Nurse Practitioner programs offering guidelines for primary care across the lifespan. The content is divided into two parts: Part I is comprised of more than 200 common complaints and conditions, covered in-depth and organized alphabetically. Each chapter is logically formatted using the SOAPE outline (subjective and objective findings, assessment, therapeutic plan, and evaluation), which mirrors the clinical reasoning process. Lifespan content on physical findings and appropriate treatments for children, elderly, and pregnant women is integrated as appropriate within each chapter and highlighted in boldface. Diagnostic tests, differential diagnoses, and pharmaceutical treatments are organized into tables and treatment plans are accompanied by algorithms for quick visual reference. Part II covers client wellness across the lifespan and includes growth and development charts, physical examination forms, and health promotion recommendations. The extensive Appendices include quick reference data, such as drug tables, immunization schedules, and laboratory values for clients in various age groups, making this book a valuable tool for students to use in nurse practitioners and into practice. * Presents each condition and complaint in the SOAPE format -- Subjective findings, Objective findings, Assessment, Plan, Evaluation -- for a logical presentation of the material that mirrors clinical reasoning. * Includes additional indices that categorize each topic four different ways -- body system, clinical diagnosis, presenting symptom, and lifespan -- to assist students in organizing study needs. * Provides ICD-9 codes for diagnostic classification and for insurance reimbursement. * Includes algorithms for conditions, providing a quick overview of diagnosis and treatment options. * Presents differential diagnoses and the supporting data in a table format for quick information access. * Outlines diagnostic and lab tests available for each condition in table format, and includes test outcomes and cost ranges to enable logical decision-making on low-cost, high-yield test options. * Presents pharmaceutical treatment plans in table format, including essential information on costs, pregnancy categories, and pediatric and geriatric dosages, to facilitate treatment options. * Includes many client education materials that students may copy and incorporate in their practice. Play for Health Across the Lifespan uses case studies to explore the impact of play and creativity on health and wellbeing throughout the lifecycle. While play at the start of life influences future development, the authors show play also has a role in improving prospects for health and wellbeing in adulthood and later life. A relational approach to health and wellbeing emphasizes the dynamic, mutually influential relationship between individual development and the changing contexts of our lives. Our personal play history is one feature of this dynamic process, and this book explores how the experience of play throughout the life course sculpts and resculpts the shape of our lives: our physical health, our mental wellbeing, and our relationship to the people and the world around us. Storytelling has been used since the beginning of time to communicate important life lessons in an engaging way. Taking inspiration from Shakespeare's 'Seven Ages of Man', the book uses a case-story approach to differentiate the stages of development and to present evidence for how play and playful experiences impact on health and wellbeing from birth to the end of life in the context of temporal and situational change. Each chapter in Play for Health Across the Lifespan introduces relevant evidence-based research on play and health, before presenting several narrative 'case stories', which illustrate the application of play theory and the neuroscience of play as they relate to each life stage. With contributions from specialists in health and education, community organizations and the creative and performing arts, this book will appeal to academics, students, and practitioners who are interested in exploring the role of play in addressing contemporary challenges to our physical, mental, and social health. This book pioneers the study of bilingualism across the lifespan and in all its diverse forms. In framing the newest research within a lifespan perspective, the editors highlight the importance of considering an individual's age in researching how bilingualism affects language acquisition and cognitive development. A key theme is the variability among bilinguals, which may be due to a host of individual and sociocultural factors, including the degree to which bilingualism is valued within a particular context. Thus, this book is a call for language researchers, psychologists, and educators to pursue a better understanding of bilingualism in our increasingly global society. Providing a solid foundation in the normal development of functional movement, Functional Movement Development Across the Life Span, 3rd Edition helps you recognize and understand movement disorders and effectively manage patients with abnormal motor function. It begins with coverage of basic theory, motor development and motor control, and evaluation of function, then discusses the body systems contributing to functional movement, and defines functional movement outcomes in terms of age, vital functions, posture and balance, locomotion, prehension, and health and illness. This edition includes more clinical examples and applications, and updates data relating to typical performance on standardized tests of balance. Written by physical therapy experts Donna J. Cech and Suzanne "Tink" Martin, this book provides evidence-based information and tools you need to understand functional movement and manage patients' functional skills throughout the life span. Over 200 illustrations, tables, and special features clarify developmental concepts, address clinical implications, and summarize key points relating to clinical practice. A focus on evidence-based information covers development changes across the life span and how they impact function. A logical, easy-to-read format includes 15 chapters organized into three units covering basics, body systems, and age-related functional outcomes respectively. Expanded integration of ICF (International Classification of Function) aligns learning and critical thinking with current health care models. Additional clinical examples help you apply developmental information to clinical practice. Expanded content on assessment of function now includes discussion of participation level standardized assessments and assessments of quality-of-life scales. More concise information on the normal anatomy and physiology of each body system allows a sharper focus on development changes across the lifespan and how they impact function. "Positive Psychology Across the Life Span provides an insight into how we are affected by the different stages of adult development and gives us the opportunity to change through choice rather than leaving change to chance. This book aims to extend that knowledge by introducing and incorporating key aspects of existential and humanistic psychology and explores positive psychology with a life-span perspective. It goes beyond theory to look at practical application, with insightful reflective questions. Humans are remarkably resilient in the face of crises, traumas, disabilities, attachment losses and ongoing adversities. This book brings together experts from a broad array of scientific fields whose research has focused on adaptive responses to stress. Each of the five sections in the book examines the relevant concepts, spanning from factors that contribute to and promote resilience, to populations and societal systems in which resilience is employed, to specific applications and contexts of resilience and interventions designed to better enhance resilience. Scholarly activity is currently proceeding along a number of different disciplinary lines, addressing a multitude of questions and issues about reading. A short list of disciplines involved in the study of reading would include linguistics, psychology, education, history, and gerontology. Among the important questions being addressed are some long-standing concerns: How are reading skills acquired? What are the basic components of reading skill? How do skilled readers differ from less skilled ones? What are the best ways to approach instruction for different groups of readers-young beginning readers, poor readers with learning problems, and teenage and adult illiterates? How can reading skill best be measured-what standardized instruments and observational techniques are most useful? The large volume of textbooks and scholarly books that issue forth each year is clear evidence of the dynamic nature of the field. The purpose of this volume is to survey some of the best work going on in the field today and reflect what we know about reading as it unfolds across the life span. Reading is clearly an activity that spans each of our lives. Yet most accounts of it focus on some narrow period of development and fail to consider the range of questions that

serious scholarship needs to address for us to have a richer understanding of reading. The book is divided into four parts. There is renewed interest in lifestyle medicine – the focus on food, physical activity, stress management, high-quality connections, restorative sleep, and avoidance of toxic substances – in the prevention, treatment, and sometimes reversal of chronic disease, but very little information exists on its application for improving specific women's health issues across the lifespan. Consequently, there is a growing need among health professionals who care for women for a textbook that addresses evidence-based lifestyle solutions to manage the health challenges they face every day in their offices. This book begins with a review of the fundamentals of Lifestyle Medicine through the lens of a woman's lifespan. It provides information about lifestyle interventions to improve gynecologic and sexual health and to manage and sometimes reverse gynecologic diseases. It clarifies the importance of lifestyle and behaviors before and during pregnancy to address infertility, reduce adverse pregnancy outcomes, and to lower non-communicable diseases in children along with emerging epigenetic evidence. The use of Lifestyle Medicine to prevent and manage breast and gynecologic cancers, enhance health as part of cancer survivorship, and decrease the risk or reduce many of the symptoms and diseases experienced during menopause including vasomotor symptoms and osteoporosis are also discussed. Additionally, the text covers cardiovascular disease, diabetes, autoimmune disorders, dementia and mental health from the perspective of gender specific differences. This book provides practical resources on implementing the components of lifestyle medicine. Some of the topics covered include models of care for women and families, reimbursement, health coaching and behavioral change, community engagement and health equity for under-resourced settings. The electronic version of the book presents supplemental material featuring in-depth reading, as well as online and digital resources for implementing Lifestyle Medicine. The book is an evidence-based source of information on women's health issues for health professionals already practicing lifestyle medicine, as well as an entry level textbook for those new to the field of lifestyle medicine. The collective expertise of each of the editors along with content provided by leaders within the American College of Lifestyle Medicine fills a much-needed void within the specialty of Lifestyle Medicine and is for providers of women's health globally. "This women's health book is evidence based and comprehensive. There is nothing like it. Elizabeth Pegg Frates, MD, DipABLM, FACLM, President Elect of the American College of Lifestyle Medicine "Healthy aging begins at pre-conception. Evidence overwhelmingly shows that it's we women who—through our lifestyle behavior choices—can take far greater control of our own health destinies, as well as the health destinies of our children and generations to come. We cannot underestimate the power of what we eat, how we move, and what we think in regard to our optimal health or lack thereof. This book is a must-read for all medical professionals!" Susan Benigas, Executive Director of the American College of Lifestyle Medicine Lifestyle Medicine is the science of taking core principles and customizing how they're applied to each individual and each situation to achieve positive health behavior change. This book sets the evidence based foundation for how that process happens, and why it needs to happen, with the most important segment of health consumers - women. It is the next for all who are passionate about changing how health care is delivered." Wayne S. Dysinger, MD, MPH, Physician, Founder and Chair, Lifestyle Medical "Lifestyle factors have a powerful role in chronic disease prevention, underscoring the profound control we have over our health. Improving Women's Health Across the Lifespan applies lifestyle medicine to women's health, empowering women and their clinicians with the tools to transform their lives, and fostering a legacy of health for future generations." JoAnn E. Manson, MD, MPH, DrPH, Professor of Medicine and the Michael and Lee Bell Professor of Women's Health, Harvard Medical School Chief, Division of Preventive Medicine Brigham and Women's Hospital. Professor. Harvard Chan School of Public Health As long as clinicians write "increase self-esteem" on treatment plans without knowing precisely what that means, there is a need for information on the construct of self-esteem and how its many components can have an effect on outcomes. This text defines self-esteem, describes its history and evolution, discusses its controversies, and presents information on intervention strategies that can make a difference when it receives clinical attention. Principles and concepts are applied to various clinical concerns faced by clients in each of the five developmental life stages: childhood, adolescence, young adulthood, midlife, and late life. Book chapters discuss a variety of specific issues—such as child trauma and abuse, ADHD, body image and eating disorders, at-risk adolescents, African American youth, sexuality in young adulthood, alcohol and other drugs issues, lesbians and gay men at midlife, career development, intergenerational conflict in Asian Americans, and loss in late life – and offer detailed strategies for the development and enhancement of self-esteem. Also included is an example of an 8-week self-esteem enhancement program. Contemporary family life educators operate within a wide range of settings and with increasingly varied populations and families. The authors, both CFLE-certified, consider the Certified Family Life Educator certification requirements of the National Council on Family Relations throughout the text. Their broad overview of the field includes a brief history and discussion of family life education as an established profession. The authors incorporate theory, research, and practice while also providing guidelines for planning, implementing, and evaluating family life education programs. Chapters on sexuality education, relationship and marriage education, and parenting education highlight some of the more prevalent and visible forms of family life education. Comments from international educators and interactive classroom exercises focus on global trends, building awareness and appreciation of diversity. Discussion questions and activities encourage readers to examine issues and apply what they have learned. This introduction to human development will be of particular interest to education, nursing and psychology students taking single-semester classes on the subject. This edition includes increased coverage of exceptional individuals, revised chapters on adulthood, and integrated web and media resources. In a unique departure from traditional lifespan development texts, each chapter is divided into three modules, and in turn, each module is divided into several smaller sections. Consequently, students encounter material in smaller, more manageable chunks that optimize learning. Personal Relationships Across the Lifespan presents a comprehensive and up-to-date account of the role of personal relationships in people's lives. Highlighting areas of special significance and research interest at each major life-stage, Patricia Noller, Judith A. Feeney and Candida Peterson, examine how close relationships develop over time and influence individual adjustment. They explore a wide range of relationships, including some that are often neglected, such as those with siblings, adult children and elderly parents. They also look at alternative family forms, such as single-parent families and step-families, and address important themes such as intimacy, conflict and power. With insightful discussion of the theory and methods typically used by researchers working in this area, Personal Relationships Across the Lifespan is an ideal resource for students and researchers of both relationships and lifespan development. It will also be of interest to practitioners, such as social workers and family therapists, working with clients with relational concerns and anyone wanting to learn more about the nature of relationships. Here's just what you need to effectively care for your patients at any stage of life in today's ever-changing world of health care. Elaine Polan and Daphne Taylor guide you through the life cycle—from conception to old age—with an emphasis on health promotion, maintenance, and restoration in clinical practice. ASD is a common developmental disability, currently identified in 1 of 59 children in the United States and occurring across all racial, ethnic, and socioeconomic groups.
