The hybrids of Hippeastrum, also known by gardeners as amaryllis, have long been popular indoor plants, their flamboyant blooms bringing cheer

during the dark winter months. This book for gardeners describes the astonishing range of hybrids now available and explains how to get the best results from these rewarding plants whether grown indoors, outdoors, or under glass. Hundreds of full-color, step-by-step photographic sequences and detailed instructions introduce the appropriate propagation techniques for more than one thousand different kinds of plants, including roses, orchids, ferns, palms, grasses, vegetables, and annuals. Weeds is a beautiful collection of the most fascinating vagabond plants around. Gorgeous botanical illustrations from the Royal Horticultural Society's archives highlight the delicate charms of 50 captivating species, while in-depth profiles provide key information for the modern gardener on the identification, cultivation and usefulness of weeds. These subversive species no longer need to be seen as "plants out of place". Their natural untamed beauty, ability to thrive under challenging conditions, and the attraction of growing species native to their surroundings have all taken weeds from undesirable to covetable. In the modern wild garden, where harmony with nature is key, weeds are finally getting their moment in the sun. This Trilogy explains "What is Horticulture?". Volume three of Horticulture: Plants for People and Places presents readers with detailed accounts of the scientific and scholastic concepts which interact with the arts and humanities and which now underpins the rapidly evolving subject of Social Horticulture. This discipline transcends the barriers between science, medicine and the arts. This volume covers:- Horticulture and Society, Diet and Health, Psychological Health, Wildlife, Horticulture and Public Welfare, Education, Extension, Economics, Exports and Biosecurity, Scholarship and Art, Scholarship and Literature, Scholarship and History and the relationship between Horticulture and Gardening. This volume brings the evolution of the Discipline and Vocation of Horticulture firmly into the 21st Century. It covers new ground by providing a detailed analysis of the value of Horticulture as a force for enhancing society in the forms of social welfare, health and well-being, how knowledge is transferred within and between generations, and the place of Horticulture in the Arts and Humanities.

Substantial emphasis is given to the relationships between health, well-being and plants by the internationally acclaimed authors who have contributed accounts of their work in this book. Since its first publication in 1987, the AHS Encyclopedia of Plants and Flowers has sold nearly 3 million copies and become the must-have reference for all gardeners around the world. This is the ideal book for selecting plants, planning a border, a greenhouse, or a whole garden, and for identifying plants, and it contains a wealth of information on their appearance and cultivation. The 8,000 plants described cover suitability for every climate, including house and conservatory plants. The book begins with a general introduction and explanation of plant names, followed by a revised and enlarged plant selector, highlighting plants suitable for particular sites, soils, conditions, and purposes. The 5,000-entry illustrated plant catalog follows, divided into eight main sections: trees, shrubs, roses, climbers, perennials, annuals and biennials, rock plants, bulbs, water plants, and cacti and other succulents. In this new edition, the sections have been re-ordered to help plants be chosen more intuitively: by color, then season, then size. Feature spreads throughout the color section illustrate a range of cultivars within the most popular genera, such as pelargoniums and clematis. Each plant variety is illustrated by a colorful photograph, and accompanied by a detailed description with cultivation requirements. The single-color, text-only plant dictionary at the back contains entries for every genus in the book, plus more than 3,000 plants in addition to those in the illustrated catalog. It also functions as an index to the plant catalog, with extensive cross-referencing. All the information needed to grow each plant is included here. Following the introduction and plant selector, the book is divided into two main sections: a 440-page, full-colour illustrated plant catalogue, and a plant dictionary featuring 8,000 plants listed alphabetically by botanical name. There is also an index of common names and glossary of terms.

'Never has the work of the Royal Horticultural Society been more important or more far reaching.' Foreword by Alan Titchmarsh The RHS is the world's largest gardening charity but what it does and why is little understood and rarely celebrated. From defining new gardening trends at the Chelsea Flower Show, to ranking the best dahlias to grow at the Wisley

trial grounds, to inspiring communities with Britain in Bloom, educating children to grow and eat their veg through the Campaign for School Gardening, the RHS works tirelessly to improve the gardener's lot. With the use of evocative archive images and contemporary photos by award-winning Jason Ingram, this beautiful book explores the past, present and future of this most influential organisation by listening to the voices of those working today. From the thousands of volunteers in the society's five unique gardens (Wisley in Surrey, Rosemoor in Devon, Hyde Hall in Essex, Harlow Carr in Yorkshire and new addition Bridgewater in Salford), to the one million visitors to its inspirational flower shows (including Chelsea, Hampton Court, Tatton Park, Cardiff, Wisley and Chatsworth); the society gives meaning to more than 475,000 members, millions of television viewers and visitors from around the world. The RHS is the best of gardening, and this book presents the best of the RHS. Behind the scenes, access all areas, this book will give lasting pleasure to anyone who enjoys their garden.
