View our feature on Sarah Gristwood's Elizabeth & Leicester. Though the story has been told on film—and whispered in historic gossip—this is the first book in almost fifty years to solely explore the great queen's attachment to her beloved Robert Dudley, the Earl of Leicester. Fueled by scandal and intrigue, their relationship set the explosive connection between public and private life in sixteenth-century England in bold relief. Why did they never marry? How much of what seemed a passionate obsession was actually political convenience? Elizabeth and Leicester reignites this 400-year-old love story in a book for anyone interested in Elizabethan literature. Tubular structures remain a source of architectural inspiration and practical solutions to difficult performance specifications. New developments are covered in this text, which contains papers on design innovations and applications presented at an international symposium held in Australia in 1994. After graduating from the University of Saskatchewan's College of Law, Jactett was chosen as a Rhodes Scholar. He returned to Canada from Oxford not long before the outbreak of World War II and joined the ten-man Department of Justice as a junior lawyer. Through extraordinary hard work, rigorous legal analysis, and a bent for organization, he eventually became Canada's eighth deputy minister of Justice. He left this position after three years to become general counsel for the Canadian Pacific Railway and was later appointed president of the Exchequer Court of Canada. He quickly revamped the level of service provided by the court to the legal profession and the public and was instrumental in both the creation of the Canadian Judicial Council and the design and creation of the new Federal Court of Canada. As the first chief justice of the Federal Court, he led the new court by example, moulding it into the most efficient and effective court in the country, despite opposition from provincial superior courts and the Supreme Court of Canada. After fifteen years on the Bench he retired in 1979 at the height of his judicial career, believing that this would help the Court develop. He continued to work in relative obscurity at what he loved best - solving legal problems - but never again appeared before the courts. The origin of this book is the compelling evidence that a high proportion of machinery-related deaths and injuries are attributable to genuine and serious risks originating within machine design and construction. This trend continues despite significant legal obligations, notably the European regulatory regime giving effect to the Machinery Directive (among others), and a substantial body of specialist knowledge originating in the disciplines of human factors and safety engineering. Grounded in empirical research with machinery manufacturers, this book aims to elucidate the factors and processes shaping firms' performance for machinery safety, and considers their compatibility with legal obligations. Through a unique blending of rich empirical data coupled with safety, human factors, socio-legal and learning scholarship, the book provides both a nuanced account of firms' performance for machinery safety, and makes conceptual and theoretical contributions to understanding and explaining their performance. Specifically, the book elucidates the role of knowledge and motivational factors - and how these are constituted - in shaping firms' performance. It reveals the multiple state and non-state influences that create plural responses among manufacturing firms, which typically operate in supply chains and networks, and often globally. These insights provide the foundations to enhance regulatory design, and the book's conclusion recommends some innovative directions for regulatory interventions to sustain the safe design and construction of machinery. After they have a falling out, Arthur and his best friend Norman make up with very special valentines. This book publishes the proceedings from the Third International Workshop on Connections in Steel Structures: Behaviour, Strength and Design held in Trento, Italy, 29-31 May 1995. The workshop brought together the world's foremost experts in steel connections research, development, fabrication and design. The scope of the papers reflects state-of-the-art issues in all areas of endeavour, and manages to bring together the needs of researchers as well as designers and fabricators. Topics of particular importance include connections for composite (steel-concrete) structures, evaluation methods and reliability issues for semi-rigid connections and frames, and the impact of extreme loading events such as those imposed by major earthquakes. The book highlights novel methods and applications in the field and ensures that designers and other members of the construction industry gain access to the new results and procedures. This topical book contains the latest scientific and engineering developments in the field of tubular steel structures, as presented at the "11th International Symposium and IIW International Conference on Tubular Structures". The International Symposium on Tubular Structures (ISTS) has a long-standing reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research, developments and applications in this field. Various key and emerging subjects in the field of hollow structural sections are covered, such as: novel applications and case studies, static and fatigue behaviour of connections/joints, concrete-filled and composite tubular members, earthquake resistance, specification and code developments, material properties and structural reliability, impact resistance and brittle fracture, fire resistance, casting and fabrication innovations. Research and development issues presented in this book are applicable to buildings, bridges, offshore structures, entertainment rides, cranes, towers and various mechanical and agricultural equipment. This book is thus a pertinent reference source for architects, civil and mechanical engineers, designers, steel fabricators and contractors, manufacturers of hollow sections or related construction products, trade associations involved with tubing, owners or developers of tubular structures, steel specification committees, academics and research students. The conference presentations herein include two keynote lectures (the International Institute of Welding Houdremont Lecture and the ISTS Kurobane Lecture), plus finalists in the CIDECT Student Papers Competition. The 11th International Symposium and IIW International Conference on Tubular Structures – ISTS11 – took place in Québec City, Canada from August 31 to September 2, 2006. This second selection of studies by Frank D'Accone, again based principally on the documentary evidence, follows the development through the mid 16th century of musical chapels at the Cathedral and the Baptistery of Florence and of musical establishments at the Santissima Annunziata and San Lorenzo. The lives, careers and works of composers associated with these churches are illustrated and their works analyzed, particularly the theoretical treatise by Fra Mauro, the madrigals of Mauro Matti and the ambitiously conceived canzone cycle of Mattia Rampollini. The final studies, moving into the 17th century, look at the music for Holy Week, and the unprecedented programme of performances at Santa Maria Novella. The updated edition of this classic three-volume work is a comprehensive reference on all surgical and medical aspects of urology. The first two volumes cover adult urology; the third volume focuses on pediatric urology. Includes expanded coverage of prostate disease, male sexual dysfunction, spinal cord injuries, and more. The CD-ROM provides quick access to the full text of the book, plus video clips of

The Silver Library (Silber Bibliothek) of Albrecht, Duke of Prussia, and his wife Anna Maria is an absolutely unique collection of volumes bound in richly decorated precious metal. It was founded between the end of the 1540s and the beginning of the 1560s as a manifestation of the splendor of the ducal court and a deep reverence for the Word of God and Lutheran thought. Originally it consisted of twenty items mainly created in goldsmith workshops in Königsberg, Nuremberg and probably Münden. This monograph gives a historical overview of the Silver Library against the background of the ducal couple's lives as well as the culture of the 16th-century Prussia. It also presents an analysis of the bindings as examples of the Renaissance and Mannerist art of goldsmithing. First published in 1998. Looking at the architecture and engineering of tubular structures, and the behaviour of section joints, members and frames under different loads and conditions, this book provides a reference point for both civil and mechanical engineers. This is the Second Edition of the popular Canadian adaptation of Brunner and Suddarth's Textbook of Medical-Surgical Nursing, by Day, Paul, and Williams. Woven throughout the content is new and updated material that reflects key practice differences in Canada, ranging from the healthcare system, to cultural considerations, epidemiology, pharmacology, Web resources, and more. The Reformation is the boundary-line between them, except in Spain, where the New Inquisition was founded by Ferdinand and Isabella. In the present work I have sought to present an impartial account of the institution as it existed during the earlier period. For the second portion I have made large collections of material, through which I hope in due time to continue the history to its end. The Inquisition was not an organization arbitrarily devised and imposed upon the judicial system of Christendom by the ambition or fanaticism of the Church. It was rather a natural—one may almost say an inevitable—evolution of the forces at work in the thirteenth century, and no one can rightly appreciate the process of its development and the results of its activity without a somewhat minute consideration of the factors controlling the minds and souls of men during the ages which laid the foundation of modern civilization. To accomplish this it has been necessary to pass in review nearly all the spiritual and intellectual movements of the Middle Ages, and to glance at the condition of society in certain of its phases. At the commencement of my historical studies I speedily became convinced that the surest basis of investigation for a given period lay in an examination of its jurisprudence, which presents without disguise its aspirations and the means regarded as best adapted for their realization. I have accordingly devoted much space to the origin and development of the inquisitorial process, feeling convinced that in this manner only can we understand the operations of the Holy Office and the influence which it exercised on successive generations. By the application of the results thus obtained it has seemed to me that many points which have been misunderstood or imperfectly appreciated can be elucidated. If in this I have occasionally been led to conclusions differing from those currently accepted, I beg the reader to believe that the views presented have not been hastily formed, but that they are the outcome of a conscientious survey of all the original sources accessible to me. No serious historical work is worth the writing or the reading unless it conveys a moral, but to be useful the moral must develop itself in the mind of the reader without being obtruded upon him. Especially is this the case in a history treating of a subject which has called forth the fiercest passions of man, arousing alternately his highest and his basest impulses. I have not paused to moralize, but I have missed my aim if the events narrated are not so presented as to teach their appropriate lesson. These two volumes of proceedings contain 9 invited keynote papers and 126 contributed papers to be presented at the Second International Conference on Advances in Steel Structures held on 15-17 December 1999 in Hong Kong. The conference is a sequel to the International Conference on Advances in Steel Structures held in Hong Kong in December 1996. The conference will provide a forum for discussion and dissemination by researchers and designers of recent advances in the analysis, behaviour, design and construction of steel structures. The papers to be presented at the conference cover a wide spectrum of topics and were contributed from over 15 countries around the world. They report the current state-of-the art and point to future directions of structural steel research.
