Seminar paper from the year 2005 in the subject Sport - Sport Economics, Sport Management, University of Göttingen (Institut für Sportwissenschaften), course: Sportveranstalter und Marketing, 16 entries in the bibliography, language: English, abstract: Today's sport manager or administrator do not only have to be familiar with the process of management, but also need a knowledge of sport and the people involved with it. They are required to have management skills as well as a feeling for the business, which includes legal aspects. All kind of sport institutions or manifestation are influenced by legal aspect settings by constitutional / public law, federal civil rights, federal constitutions or contracts. Especially the wide range of opportunities of event management and marketing always leads to potential problems which are covered by legislation. Organizers and managers are often unaware of all essential legal duties when they are preparing and drafting a marketing plan. Many of them search specialist advice from lawyers, safety experts, and others with specific expertise in the areas they are unsure about. The risks of ignoring the duties should not be underrated at first glance, to do so could lead to consequences which could leave uncalculating damages and fatally problems for the organization or marketing plan (vgl. WATT 1998, 140 ff.). Even sport management and marketing is mainly based by total quality management which essentials are just to be more effective (vgl. WATT 1998, 114 ff.). Searching a solution or making a recreation plan is normally too late or a worst case. This is the reason why the combination of sport and legislation of management have become more demanding. The following chapters are about the host of legal issues affecting the marketing of products. The risks and duties of making sport products, as well as performing sport events, are illustrated in consideration of the property rights or the danger of collision with other currently availa Because communication among health care professionals can mean the difference between patient life and death, clear and effective patient care documentation is as important as the delivery of care itself. The rehabilitation professional faces formidable documentation responsibilities. Patient care documentation created by the rehabilitation professional must be accurate, comprehensive, concise, objective, and timely. In an interdisciplinary health care environment, documentation must also be expeditiously communicated to other professionals on the health care team. For every course in Special Education Law and Education Law, or as a perfect supplement to any Educational Administration course, Legal Aspects of Special Education was written by a practitioner to help teachers, administrators, and advocates understand special education law in everyday language- without excessive legalese or extraneous case law. Different in many ways from other special education law texts on the market, all of the elements of this text are intended to help its students obtain the most critical information about special education law and how it is applied in the real world. Some unique features include: a fascinating opening interview and then epilogue with Joe Ballard, a pioneer of the IDEA movement; a discussion of Response-to-Intervention (RTI) and the implication of IDEA 2004 for school districts; and a discussion of the history of special education and its link to the Civil Rights Movement. Legal Aspects of Emergency Services, Second Edition introduces members of fire and emergency medical services to the legal system in the United States, showing them how various types of laws affect their work in emergency services. This treatise is an outgrowth of a series of seminars and tutorials on selected legal aspects of geology that were offered to several generations of undergraduate students at Lawrence University. The offerings were in response to a keen interest in how the law and legal institutions relate to the professional geologist. Much of the student interest was undoubtedly sparked by the legal controversies associated with the "environmental movement" that became so active during the 1970s and continues today to look to the law for the resolution of conflicting goals. Other students were interested in the role allocated to law by society in general, or were simply curious about law as a profession. Existing published material did not meet my needs, and I had to rely on "handouts" summarizing legal principles, reported appellate cases, and guest lectures from the county bar association. The more formally prepared course materials were edited by practicing attorneys and scholars in academia who encouraged me to seek a publisher who might make the materials available to a broader audience-an audience that might include not only students of the law but also the professional geologist, geological engineers, planners, policy makers, and attorneys, whether in industry, government, education, or private practice, who want to know more about the relationship between law and geology. The sixth edition of this classic text (written primarily for senior and graduate level architecture, engineering, construction management, and law students) provides a bridge between the academic and real worlds. The text is also a valuable reference for practitioners and it has been cited in over twenty-five court decisions. The sixth edition has been updated to include the most up-to-date information on new developments in the legal aspects of architectural, engineering, and the construction processes. This authoritative guide presents a wide range of health care topics in a comprehensible and engaging manner that will carefully guide your students through the complex maze of the legal system. With new case studies and news clippings in each chapter, the 13th edition continues to serve as an ideal introduction to the legal and ethical issues in the healthcare workplace. The simple reason for creating this book was my impression that the law is having an increasing impact on the practice of medicine. There is hardly a physician I know who has not been deeply troubled by legal problems professionally, economically, and most important of all, psychologically. The past decade has seen medical practice premiums steadily rising. Multimillion dollar verdicts have not been unusual. Having disregarded these vital issues for many years, physicians have suddenly become very aware of litigation-related problems. Having been interested for a long time in the logic of the law and the romance of legal research, I thought it would be useful to create a book that would result in the blending of great minds in law and medicine. It has been my long standing observation and belief that the approach of professors of medicine, and that of learned members of the bar and bench, when put together, produce unique results. Putting these views together has been the real challenge in editing this book. This widely adopted text has been revised cover-to-cover, and updated with new case illustration and new points reflecting the ever-evolving nature of both law and the health care industry. The text gives students the broad base of information and specific answers they will need to safely direct their careers and their facilities. Legal Aspects of Health Care Administration is filled with concise, constructive, realistic recommendations for preventive action. It provides risk-reducing recommendations for everything from handling patient valuables to complying with the Americans with Disabilities Act. Aiming to provide the readers an understanding and knowledge of business-related laws, the book provides in-depth coverage of the law of contract and sale of goods, laws dealing with negotiable instruments, consumer rights, competition and also law regulating the incorporation and management of companies in India. The second edition of Legal Aspects of Business: Texts, Jurisprudence, and Cases is a comprehensive textbook designed especially for postgraduate students of business management. It presents a complete, all inclusive jurisprudence and supplements the concepts with numerous cases, exercises, and profiles of legal luminaries. The book is divided into six parts. As the contract law is foundation to all business laws, Part II, Commercial Jurisprudence, on Mercantile Law discusses the Indian Contract Act, 1872 and its features at length. The Sale of Goods Act, 1930, the Negotiable Instrument Act, 1881, The Indian Partnership Act, 1932, the Companies Act, 2013, and the Competition Act, 2002 are also covered in depth.

Part III, Financial Jurisprudence, covers the laws related to finance and banking at length. Part IV, Labour and Industrial Jurisprudence, covers the laws related to wages, workers' social security, and industrial relations. Part V, Aspects of New Economy and Jurisprudence, throws light on laws related to information and communication, intellectual property rights, and environment protection. Part VI, Judicial and Social Jurisprudence, is devoted to business and criminal liability and basic rights and business. The book also offers valuable insights to practitioners to arrive at legally sound decisions in various business situations.
