This book constitutes the proceedings of the 24th International Conference on Theory and Practice of Digital Libraries, TPDL 2020, held in Lyon, France, in August 2020.* The 14 full papers and 4 short papers presented were carefully reviewed and selected from 53 submissions. TPDL 2020 attempts to facilitate establishing connections and convergences between diverse research communities such as Digital Humanities, Information Sciences and others that could benefit from ecosystems offered by digital libraries and repositories. The papers present a wide range of the following topics: knowledge graphs and linked data; quality assurance in digital libraries; ontology design; user requirements and behavior; research data management and discovery; and digital cultural heritage. * The conference was held virtually due to the COVID-19 pandemic. This unusual volume presents an overview of Jean Piaget's work in psychology--from his earliest writings to posthumous publications. It also contains a glossary of the essential explanatory concepts found in this work. The focus is on Piaget's psychological studies and on the underlying epistemological theses. The book may be consulted in various ways depending on whether one is looking for an introduction to Piaget's theory, details about a particular concept, a survey of his body of work, or a historical perspective. Readers who are relatively unfamiliar with Piaget's ideas and seek access to them through this book will not necessarily proceed in the same way as those who are acquainted with Piaget's work and wish to refresh, synthesize, or complete their knowledge. The volume is divided into two major sections with several subdivisions as follows: * The Chronological Overview presents Piaget's early ideas and the most important sources of his inspiration, and reviews his research work dividing it into four main periods plus a transitional one. * The Glossary covers a number of explanatory concepts which are essential to Piaget's theory. "Governing Knowledge Commons argues that innovation policymaking should be based on a deeper understanding of what makes commons institutions work. It borrows from and builds on Elinor Ostrom's Nobel Prize-winning research on natural resource commons to propose a case study framework adapted to the unique attributes of knowledge and information. Eleven contributed case studies and two theoretical responses explore knowledge commons across a wide variety of scientific and cultural domains"--Unedited summary from book cover. Enter a magical world of friendship and fun! In the sixth book of the first Secret Kingdom series, every fairy in the kingdom is at Glitter Beach to watch the magic being renewed in the kingdom for another year. But Queen Malice is also nearby... Can Ellie, Summer and Jasmine save the glitter dust and keep the magic alive? Secret Kingdom is a brand new series full of the things girls love most: special friendships, secrets and magical adventures. Newly confident readers will be swept away by the magical stories of three children whose courage and resourcefulness save a fantastical land from disaster. Full of all the things little girls love best: special friendships, secrets and magical adventures, all set in an incredible kingdom! Eye-catching illustrations throughout. Become best friends with Ellie, Summer and Jasmine - plus Trixi the pixie! Help Ellie, Summer and Jasmine save the Secret Kingdom from wicked Queen Malice and her naughty storm sprites. A new exciting adventure in each and every book. Creates an analytical framework for management of emerging forms of inter-organizational collaboration. This book's unique perspective stems from its "knowledgediamond" framework to examine how individuals, communities, organizations and host industries reciprocally influence each other in the course of knowledge work. This highly topical book focuses on work-based projects as a focus for organizational learning. Establishes the link between individual, community, organization and industry learning. Suggests that organizations need to recognize and understand this link if they are to capitalize on project-based learning. Incorporates material on project-based learning in virtual communities. Refers to different examples, such as the film industry, the software industry and the boat building industry. Includes end-of-chapter questions provoking reflection and discussion. Scholars in the exact and social sciences join literary critics to consider the work of French author Michel Rio and to reflect on literature's place in intellectual discourse in an age dominated by science. Knowledge remains timely in education. The need for academics to contemplate its relevance, worth, use and everything in-between deems a continuous intellectual project, rather than a conundrum to be solved. This book takes the South African context by the horns as it challenges the often dormant and traditionalist ways in which higher education spaces see knowledge. Through original research and the voices of academics and students, this book argues for repurposing knowledge generation, knowledge sharing and critical pedagogy so that more inclusive teaching and learning environments can be both imagined and sustained. The contentious tensions that this creates for LoLT and SoTL, in particular, are unlocked so as to trouble the South African higher education landscape with the intent to proffer alternative pathways for a knowledge beyond colour lines. Prof Shan Simmonds (PhD) NWU This edited volume bristles with fresh scholarly approaches and insights of an emergent generation of engaged scholars grappling with the issues and problems of higher education in South Africa. The issues dealt with here are varied and encompassing. They are treated with intellectual delicacy and probing sensitivity, articulacy, informed data and bold conclusions. They serve well! Paper Knowledge is a remarkable book about the mundane: the library card, the promissory note, the movie ticket, the PDF (Portable Document Format). It is a media history of the document. Drawing examples from the 1870s, the 1930s, the 1960s, and today, Lisa Gitelman thinks across the media that the document form has come to inhabit over the last 150 years, including letterpress printing, typing and carbon paper, mimeograph, microfilm, offset printing, photocopying, and scanning. Whether examining late nineteenth century commercial, or "job" printing, or the Xerox machine and the role of reproduction in our understanding of the document, Gitelman reveals a keen eye for vernacular uses of technology. She tells nuanced, anecdote-filled stories of the waning of old technologies and the emergence of new. Along the way, she discusses documentary matters such as the relation between twentieth-century technological innovation and the management of paper, and the interdependence of computer programming and documentation. Paper Knowledge is destined to set a new agenda for media studies. CTET Practice Workbook (10 Solved + 10 Mock papers) Paper 1 (Class 1 to 5), English edition contains 10 challenging Mock Papers and Past 10 Solved Papers of the CTET exam. The Mock Tests follows the exact pattern as per the latest CTET paper. The book also contains the solution to the past CTET papers of June 2011, Jan & Nov 2012, July 2013, Feb & Sep 2014, Feb & Sep 2015 and Feb & Sep 2016 Papers. The languages covered in the tests are English (1st language) and Hindi (2nd language). Each Practice Set in the book contains sections on Child Development & Pedagogy, English, Hindi, EVS and Maths. The question papers have been set very diligently so as to give a real feel of the actual TET. The book is also useful for other State TETs - UPTET, Rajasthan TET, Haryana TET, Bihar TET, Uttarakhand TET etc. A step-by-step guide for turning information into advantage This book describes a ten-step method that empowers companies to transform their information into knowledge, helping managers develop and maintain a balanced knowledge plan, solve information shortfalls, and take advantage of the information at their fingertips. This book traces the rise of a formal model of science in thirteenth-century Europe and resultant changes in assumptions about Knowledge of God in the world, investigating scholastic antecedents to modern science and reconceptualizing medieval schools of thought. The print edition is available as a set of two volumes (9789004119475). This book constitutes the thoroughly refereed post-proceedings of the 4th International Conference on Mathematical Knowledge Management. The 26 revised full papers presented were carefully selected during two rounds of reviewing and improvement from 38 submissions. The papers cover mathematical knowledge management. Topics range from foundations and the representational and document-structure aspects of mathematical knowledge, over process questions like authoring, migration, and consistency management by automated theorem proving to applications in e-learning and case studies. It is generally agreed that knowledge plays an important role in translation and interpreting and that it should therefore be of central concern to translation and interpreting studies. However, there is no general agreement about what is actually meant by the term 'knowledge' in this context, nor about in exactly what ways it is relevant. Also, present-day translation and interpreting studies offer only a limited amount of research specifically dedicated to knowledge systematization and other knowledge-related issues. This book is one of the first to systematically and exclusively address the question of knowledge in translation and interpreting. It is a collection of papers by leading scholars both from the field of translation and interpreting and from adjacent fields where knowledge also plays an important role, such as linguistics and computer science. The experts present a wide variety of conceptions of knowledge and a number of different approaches to the study of knowledge in translation and interpreting: some of them draw on concepts such as scenes and frames, mental spaces and semantic networks, some discuss knowledge systems from an ontological point of view, and some present more general concepts of knowledge in translation and interpreting. Along the same lines, some of the contributors deal mainly with theoretical and conceptual aspects, others focus on methodological issues, and again others report on empirical studies. What brings them together, however, is their common focus on the interface between knowledge and translation/interpreting, and their main achievement is that, by joining forces, they manage to present to their readers a state-of-the-art report which offers both a clearer delimitation of the concept of knowledge and a better understanding of its role in translation and interpreting. Working with Paper builds on a growing interest in the materials of science by exploring the gendered uses and meanings of paper tools and technologies, considering how notions of gender impacted paper practices and in turn how paper may have structured knowledge about gender. Through a series of dynamic investigations covering Europe and North America and spanning the early modern period to the twentieth century, this volume breaks new ground by examining material histories of paper and the gendered worlds that made them. Contributors explore diverse uses of paper—from healing to phrenological analysis to model

making to data processing—which often occurred in highly gendered, yet seemingly divergent spaces, such as laboratories and kitchens, court rooms and boutiques, ladies’ chambers and artisanal workshops, founding houses and colonial hospitals, and college gymnasiums and state office buildings. Together, they reveal how notions of masculinity and femininity became embedded in and expressed through the materials of daily life. Working with Paper uncovers the intricate negotiations of power and difference underlying epistemic practices, forging a material history of knowledge in which quotidian and scholarly practices are intimately linked. This book provides a concise review of essential topics that may be tested in the MSRA exam (Clinical Knowledge Paper). This would allow prospective candidates to have a rapid review of topics, taking revision pressure off in the face of busy clinical schedule. Medical students in their Internal/Acute Medicine rotation or revising for Finals may also find this book helpful. Target success in Edexcel AS/A-level History with this proven formula for effective, structured revision; key content coverage is combined with exam preparation activities and exam-style questions to create a revision guide that students can rely on to review, strengthen and test their knowledge. - Enables students to plan and manage a successful revision programme using the topic-by-topic planner - Consolidates knowledge with clear and focused content coverage, organised into easy-to-revise chunks - Encourages active revision by closely combining historical content with related activities - Helps students build, practise and enhance their exam skills as they progress through activities set at three different levels - Improves exam technique through exam-style questions with sample answers and commentary from expert authors and teachers - Boosts historical knowledge with a useful glossary and timeline

Contemporary philosophy of mind is dominated by anti-individualism, which holds that a subject's thoughts are determined not only by what is inside her head but also by aspects of her environment. Despite its dominance, anti-individualism is subject to a daunting array of epistemological objections: that it is incompatible with the privileged access each subject has to her thoughts, that it undermines rationality, and, absurdly, that it provides a new route to a priori knowledge of the world. In this rigorous and persuasive study, Jessica Brown defends anti-individualism from these epistemological objections. The discussion has important consequences for key epistemological issues such as skepticism, closure, transmission, and the nature of knowledge and warrant. According to Brown's analysis, one main reason for thinking that anti-individualism is incompatible with privileged access is that it undermines a subject's introspective ability to distinguish types of thoughts. So diagnosed, the standard focus on a subject's reliability about her thoughts provides no adequate reply. Brown defuses the objection by appeal to the epistemological notion of a relevant alternative. Further, she argues that, given a proper understanding of rationality, anti-individualism is compatible with the notion that we are rational subjects. However, the discussion of rationality provides a new argument that anti-individualism is in tension with Fregean sense. Finally, Brown shows that anti-individualism does not create a new route to a priori knowledge of the world. While rejecting solutions that restrict the transmission of warrant, she argues that anti-individualists should deny that we have the type of knowledge that would be required to use a priori knowledge of thought content to gain a priori knowledge of the world. As three young, dynamic GPs working in London we realised that there was a dearth of well written up-to-date MCQ revision guides with satisfactory explanations. Since we all achieved distinctions in the MRCGP exam we believed we could incorporate our revision notes on hot topics to develop a high-quality contemporary MCQ resource...This comprehensive revision aid covers the entire nMRCGP syllabus over four exam papers. It's the most up-to-date guide available for the new exam and, alongside its online resources, provides a wide-ranging tool for candidates. It's easy to read and comprehend, and exam topics are grouped in the index to make for easy reference and further study. This book presents an innovative and radically logical way of thinking about organizational knowledge and competition that centers on discipline, integration and focus. By tapping into the previously unrealized strengths that lie in all companies, the author suggests that it is possible for companies to move beyond informational chaos to create focused and enticing new opportunities. The 12 step method presented in the first five chapters show you how to take information from feedback from assessments, surveys and audits, convert it into usable knowledge and get bottom line improvements. The strategy expands the plan-do-check-act (PDCA) model into a Plan-Do-Knowledge-Act (PDKA) process. The case studies provided reinforce the principles and the theory behind them. Significant challenges face any organization intent on becoming world-class by managing knowledge effectively. They can be classified into four types: making use of your information by integrating it, organizing the different forms of information into a manageable framework, focusing equal attention on your strengths and your weaknesses, developing decision-making criteria based on key company drivers. The 12 steps outlined in Knowledge-Driven Profit Improvement: Implementing Assessment Feedback Using PDKA Theory will show you how to make your company into a world-class organization. Features Assists companies in becoming more competitive Serves as a guide for companies to use when taking their feedback from assessments, surveys, and audits, then integrating the feedback, and prioritizing it so that financial and operational improvements can be made Allows companies to use the information they have been accruing for years Helps companies establish better business priorities for the purpose of better planning Demonstrates the significance of improvements made by using the information gained from assessments. An argument that nativism is true and important but mysterious, examining the particular case of ideas of sensible qualities. In this book, Colin McGinn presents a concise, clear, and compelling argument that the origins of knowledge are innate—that nativism, not empiricism, is correct in its theory of how concepts are acquired. McGinn considers the particular case of sensible qualities—ideas of color, shape, taste, and so on. He argues that these, which he once regarded as the strongest case for the empiricist position, are in fact not well explained by the empiricist account that they derive from interactions with external objects. Rather, he contends, ideas of sensible qualities offer the strongest case for the nativist position—that a large range of our knowledge is inborn, not acquired through the senses. Yet, McGinn cautions, how this can be is deeply problematic; we have no good theories about how innate knowledge is possible. Innate knowledge is a mystery, though a fact. McGinn describes the traditional debate between empiricism and nativism; offers an array of arguments against empiricism; constructs an argument in favor of nativism; and considers the philosophical consequences of adopting the nativist position, discussing perception, the mind–body problem, the unconscious, metaphysics, and epistemology. Adopting an interdisciplinary perspective, BUILDING GENRE KNOWLEDGE provides a unique look into the processes of building genre knowledge while offering a dynamic theory of those processes that is inclusive of both monolingual and multilingual writers—a necessary move in today’s linguistically diverse classrooms. It will therefore be of great interest to researchers and practitioners in both first and second language writing studies. This is a collection of papers presented in the 11th European Japanese Conference on Information Modelling and Knowledge Bases held in Maribor, Slovenia. This annually organized conference brings together the leading researchers from Europe and Japan to introduce the latest results of their research. "This book presents current research in Knowledge Management, highlighting new technologies, approaches, issues, solutions, or cases that can help an organization implement a knowledge management initiative or provide a knowledge base"--Provided by publisher. A provocative survey of interdisciplinary challenges to the concept of determinism. This book serves as a complete introduction to the subject of Knowledge Management (KM), and incorporates technical as well as social aspects, concepts as well as practical examples, and traditional KM approaches as well as emerging topics. Knowledge Management: Systems and Processes enhances the conventional exposition of KM with an in-depth discussion of the technologies used to facilitate the management of knowledge in large and small organizations. This includes a complete description of the theory and applications of the various techniques and technologies currently in use to manage organizational knowledge. The discussion of technology is at a level appropriate for the typical business administration graduate student or corporate manager. Special features: * Includes case studies of actual implementations of KM systems, including details such as system architecture * Contains numerous vignettes describing practical applications of KM initiatives at leading firms and governmental organizations * Provides a balanced view of knowledge management, while incorporating benefits and controversial issues, and both technology and social aspects * Extremely current, making extensive use of latest developments in, and examples from, the field of KM * Written by two proficient and recognized researchers in the field of KM. The book "The General Knowledge Compendium" contains specific topics in General Knowledge which form a part of the IAS Prelim, PSC & other Competitive Exams. The book contains to the point theory in all the chapters followed by an exercise with detailed solutions. The theory covers tables, charts and a lot of information about India and the World. The book is divided into 6 chapters followed by 2 levels of exercises with 600+ Simple MCQs & statement based MCQs. The book covers detailed information on Indian & World Panorama, Art and Culture, Sports and Games, National & International Organisations, & Awards and Honours apt for these exams. The book covers a lot of questions from the past UPSC exams in every chapter. Comprehensive second editions of History for the IB Diploma Paper 1, revised for first teaching in 2015. This coursebook covers Paper 1, Prescribed Subject 3: The Move to Global War of the History for the International Baccalaureate Diploma syllabus for first assessment in 2017. Tailored to the requirements of the IB syllabus and written by experienced IB History examiners and teachers, it offers authoritative and engaging guidance through the following two case studies: Japanese expansion in East Asia (1931-1941) and German and Italian expansion (1933-1940). Helen Longino seeks to break the current deadlock in the ongoing wars between philosophers of science and sociologists of science--academic battles founded on disagreement about the role of social forces in constructing scientific knowledge. While many philosophers of science downplay social forces, claiming that scientific knowledge is best considered as a product of cognitive processes, sociologists tend to argue that numerous noncognitive factors influence what scientists learn, how they package it, and how readily it is accepted. Underlying this disagreement, however, is a common assumption that social forces are a source of bias and irrationality. Longino challenges this assumption, arguing that social interaction actually assists us in securing firm, rationally based knowledge. This important insight allows her to develop a durable and novel account of scientific knowledge that integrates the social and cognitive. Longino begins with a detailed discussion of a wide range of contemporary thinkers who write on scientific knowledge, clarifying the philosophical points at issue. She then critically analyzes the dichotomous understanding of the rational and the social that characterizes both sides of the science studies stalemate and the social account that she sees as necessary for an epistemology of science that includes the full spectrum of cognitive processes. Throughout, her account is responsive both to the normative uses of the term knowledge and to the social conditions in which scientific knowledge is produced. Building on ideas first advanced in her influential book Science as Social Knowledge, Longino brings her account into dialogue with current work in social epistemology and science studies and shows how her critical social approach can help solve a variety of stubborn problems. While the book focuses on epistemological concerns related to the sociality of inquiry, Longino also takes up its implications for scientific pluralism. The social approach, she concludes, best allows us to retain a meaningful concept of knowledge in the face of theoretical plurality and uncertainty. "This book illustrates, compares, and discusses models, perspectives, and approaches involved in the distribution, administration, and transmission of knowledge across organizations"--Provided by publisher.
