**Social Media in the Public Sector** Jul 14 2021 Grounded in solid research, Social Media in the Public Sector explores the myriad uses of social media in the public sector and combines existing practices with theories of public administration, networked governance, and information management. Comprehensive in scope, the book includes best practices, the strategic, managerial, administrative, and procedural aspects of using social media, and explains the theoretical dimensions of how social behavior affects the adoption of social media technologies.

Praise for Social Media in the Public Sector "Mergel has produced a foundational work that combines the best kind of scholarship with shoe-leather reporting and anthropology that highlights the debates that government agencies are struggling to resolve and the fruits of their efforts as they embrace the social media revolution. Social Media in the Public Sector is a first and sets a high standard against which subsequent analysis will be measured." —Lee Rainie, director, Pew Research Center's Internet & American Life Project "Mergel is an award-winning author who again wields her story skills in this book. She excels in explaining in concrete, practical terms how government managers can use social media to serve the public. Her book puts years of research into one handy guide. It's practical. It's readable. And it's an essential read." —John M. Kamensky, senior fellow, IBM Center for The Business of Government "Mergel moves beyond the hype with detailed, comprehensive research on social media technologies, use, management, and policies in government. This book should be required reading for researchers and public managers alike." —Jane Fountain, professor and director, National Center for Digital Government,

University of Massachusetts Amherst "Comprehensive and compelling, Social Media in the Public Sector makes the case that to achieve Government 2.0, agencies must first adopt Web 2.0 social technologies. Mergel explains both how and why in this contemporary study of traditional institutions adopting and adapting to new technologies." —Beth Simone Noveck, United States Deputy Chief Technology Officer (2009-2011)

 Film, Lacan and the Subject of Religion Feb 18 2022 In their study of religion and film, religious film analysts have tended to privilege religion. Uniquely, this study treats the two disciplines as genuine equals, by regarding both liturgy and film as representational media. Steve Nolan argues that, in each case, subjects identify with a represented 'other' which joins them into a narrative where they become participants in an ideological 'reality'. Finding many current approaches to religious film analysis lacking, Film, Lacan and the Subject of Religion explores the film theory other writers ignore, particularly that mix of psychoanalysis, Marxism and semiotics - often termed Screen theory - that attempts to understand how cinematic representation shapes spectator identity. Using

translations and commentary on Lacan not originally available to Screen theorists, Nolan returns to Lacan's contribution to psychoanalytic film theory and offers a sustained application to religious practice, examining several 'priest films' and real-life case study to expose the way liturgical representation shapes religious identity. Film, Lacan and the Subject of Religion proposes an interpretive strategy by which religious film analysts can develop the kind of analysis that engages with and critiques both cultural and religious practice.

 <u>Collecting Prints, Posters, and Ephemera</u> Jan 26 2020 Why did collectors seek out posters and collect ephemera during the late-nineteenth and the twentieth centuries? How have such materials been integrated into institutional collections today? What inspired collectors to build significant holdings of works from cultures other than their own? And what are the issues facing curators and collectors of digital ephemera today? These are among the questions tackled in this volume-the first to examine the practices of collecting prints, posters, and ephemera during the modern and contemporary periods. A wide range of case studies feature collections of printed materials from the United States, Latin America, France, Germany, Great Britain, China, Japan, Russia, Iran, and Cuba. Fourteen essays and one roundtable discussion,

all specially commissioned from art historians, curators, and collectors for this volume, explore key issues such as the roles of class, politics, and gender, and address historical contexts, social roles, value, and national and transnational aspects of collecting practices. The global scope highlights cross-cultural connections and contributes to a new understanding of the place of prints, posters and ephemera within an increasingly international art world.

**Xu Bing** Jul 26 2022 This volume offers a path-breaking reassessment of Xu Bing's oeuvre by analyzing the diverse cultural environments in which his work has developed since the Book from the Sky. It contains three lecture transcripts and eight art historical essays; these explore themes such as Xu's animal works, audience participation, new ink, prints, realism, socialist spectacle, and word play. A critical question addressed in this volume is what carries art to a global level beyond regional histories and cultural symbols. Absorbing critical essays on contemporary Chinese aesthetics addressing the social context and philosophical concerns that underlie Xu Bing's key works. The authors analyze Xu's art, shedding light on the tangled history of socialism and neoliberalism in the Post-

Mao period. --Prof. Dr. Lothar Ledderose, Senior Professor, Institute of East Asian Art, Universität Heidelberg

**The Routledge Handbook of Designing Public Spaces for Young People** May 24 2022 The Routledge Handbook of Designing Public Spaces for Young People is a thorough and practical resource for all who wish to influence policy and design decisions in order to increase young people's access to and use of public spaces, as well as their role in design and decision-making processes. The ability of youth to freely enjoy public spaces, and to develop a sense of belonging and attachment to these environments, is critical for their physical, social, cognitive, and emotional development. Young people represent a vital citizen group with legitimate rights to occupy and shape their public environments, yet they are often driven out of public places by adult users, restrictive bylaws, or hostile designs. It is also important that children and youth have the opportunity to genuinely participate in the planning of public spaces, and to have their needs considered in the design of the public realm. This book provides both evidence and tools to help effectively advocate for more youth-inclusive public

environments, as well as integrate youth directly into both research and design processes related to the public realm. It is essential reading for researchers, design and planning professionals, community leaders, and youth advocates.

 Fashion and Utopia in Management Thinking Nov 17 2021 "Building upon some rather unusual sources in postmodern theory, the author argues that management fashion might encourage the practitioner to engage in philosophical self-examination and to adopt alternative forms of understanding. However, it is also argued that management fashion often fails to keep up to this promise because it remains paradoxically incapable of laying off its rationalist cloak."--BOOK JACKET.

Network Models for Data Science May 12 2021 This text on the theory and applications of network science is aimed at beginning graduate

students in statistics, data science, computer science, machine learning, and mathematics, as well as advanced students in business, computational biology, physics, social science, and engineering working with large, complex relational data sets. It provides an exciting array of analysis tools, including probability models, graph theory, and computational algorithms, exposing students to ways of thinking about types of data that are different from typical statistical data. Concepts are demonstrated in the context of real applications, such as relationships between financial institutions, between genes or proteins, between neurons in the brain, and between terrorist groups. Methods and models described in detail include random graph models, percolation processes, methods for sampling from huge networks, network partitioning, and community detection. In addition to static networks the book introduces dynamic networks such as epidemics, where time is an important component.

Current Trends in Transformation Groups Mar 22 2022 This book provides an overview of some of the most active topics in the theory of

transformation groups over the past decades and stresses advances obtained in the last dozen years. The emphasis is on actions of Lie groups on manifolds and CW complexes. Manifolds and actions of Lie groups on them are studied in the linear, semialgebraic, definable, analytic, smooth, and topological categories. Equivalent vector bundles play an important role. The work is divided into fifteen articles and will be of interest to anyone researching or studying transformations groups. The references make it easy to find details and original accounts of the topics surveyed, including tools and theories used in these accounts.

**Gender and Discourse** Aug 03 2020 The contributors to this collection offer an essential introduction to the ways in which feminist linguistics and critical discourse analysis have contributed to our understanding of gender and sex. Gender and Discourse brings together European, American and Australian traditions of research. Through an analysis of a range of `real' data, the contributors

demonstrate the relevance of these theoretical and methodological insights for gender research in particular and social practice in general.

 **Molto Agitato** Jun 24 2022 If the opera world is full of "intrigue, double meanings, and devious dramatics," then no place exemplifies this more than the world-famous Metropolitan Opera, where politics, ambition, and oversized egos have traditionally taken center stage along with some of the world's richest music. Drawing on her fifteen years as its press representative, Johanna Fiedler explodes the traditional secrecy that surrounds the Met in this wonderfully entertaining account of its tumuluous history. Fiedler chronicles the Met's early days as a home for legends like Toscanini, Mahler, and Caruso, and gives a fascinating account of the middle years when haughty blue-bloods battled stubborn adminstrators for control of a company that would emerge as America's premiere opera house. She takes us behind the grand gold-curtain stage in more recent years as well, showing how musical superstars like Luciano Pavarotti, Plácido Domingo, and Kathleen Battle have electrified performances and scandalized the public. But most revelatory are Fiedler's portrayals of James Levine and Joseph Volpe and

their practically parallel ascendancies—Levine rising from prodigy to artistic director, Volpe advancing from stagehand to general manager—and their once strained relationship. Weaving together the personal, economic, and artistic struggles that characterize the Met's long and vibrant history, Molto Agitato is a must-read saga of power, wealth, and, above all, great music.

**Lone Wolf and Autonomous Cell Terrorism**

Apr 10 2021 President Obama has declared that the greatest terrorist threat which America faces is attacks by lone wolf terrorists. This volume expands the lone wolf rubric to include autonomous cells: small groups of terrorists who cooperate, but operate independently. The challenge presented by lone wolves and autonomous cells, unlike the threat emanating from established terrorist groups like Al Qaeda, has proven intractable because of the difficulty of gathering intelligence on these actors or effectively countering their actions. Lone wolves operate under the radar, staging deadly attacks such as that at the Boston Marathon, and the 2011 attacks in Norway. This volume includes Theory and Policy Studies, individual case studies and the technological impacts of chemical, biological and nuclear weapons as well as the impact of social media in the process of recruitment and radicalization. This book was originally published as a special issue of Terrorism & Political Violence.

*Topology Through Inquiry* Nov 05 2020 Topology Through Inquiry is a comprehensive introduction to point-set, algebraic, and geometric topology, designed to support inquiry-based learning (IBL) courses for upper-division

undergraduate or beginning graduate students. The book presents an enormous amount of topology, allowing an instructor to choose which topics to treat. The point-set material contains many interesting topics well beyond the basic core, including continua and metrizability. Geometric and algebraic topology topics include the classification of 2-manifolds, the fundamental group, covering spaces, and homology (simplicial and singular). A unique feature of the introduction to homology is to convey a clear geometric motivation by starting with mod 2 coefficients. The authors are acknowledged masters of IBL-style teaching. This book gives students joy-filled, manageable challenges that incrementally develop their knowledge and skills. The exposition includes insightful framing of fruitful points of view as well as advice on effective thinking and learning. The text presumes only a modest level of mathematical maturity to begin, but students who work their way through this text will grow from mathematics students into mathematicians. Michael Starbird is a University of Texas Distinguished Teaching Professor of Mathematics. Among his works are two other co-authored books in the Mathematical Association

of America's (MAA) Textbook series. Francis Su is the Benediktsson-Karwa Professor of Mathematics at Harvey Mudd College and a past president of the MAA. Both authors are award-winning teachers, including each having received the MAA's Haimo Award for distinguished teaching. Starbird and Su are, jointly and individually, on lifelong missions to make learning—of mathematics and beyond—joyful, effective, and available to everyone. This book invites topology students and teachers to join in the adventure.

**Clues, Myths, and the Historical Method** Jan 20 2022 Carlo Ginzburg considers how we assign historical context to events. More than twenty years after Clues, Myths, and the Historical Method was first published in English, this extraordinary collection remains a classic. The book brings together essays about Renaissance witchcraft, National Socialism, sixteenth-century Italian painting, Freud's wolf-man, and other topics. In the influential centerpiece of the volume Carlo Ginzburg places historical knowledge in a long tradition of cognitive practices and shows how a research strategy based on reading clues and traces embedded in the historical record reveals otherwise hidden information. Acknowledging his debt to art history, psychoanalysis, comparative religion, and anthropology, Ginzburg challenges us to retrieve cultural and social dimensions beyond disciplinary boundaries. In his new preface, Ginzburg reflects on how easily we miss the context in which we read, write, and live. Only hindsight allows some understanding. He examines his own path in research during the 1970s and its relationship to the times, especially

the political scenes of Italy and Germany. Was he influenced by the environment, he asks himself, and if so, how? Ginzburg uses his own experience to examine the elusive and constantly evolving nature of history and historical research.

*The Collected Papers of R.h. Bing* May 04 2023 A powerful mathematician and a great problem solver, R. H. Bing laid the foundation for a number of areas of topology. Many of his papers have continued to serve as a source of major theoretical developments and concrete applications in recent years. One outstanding example was Michael H. Freedman's use of Bing's Shrinking Criterion to solve the four-dimensional Poincaré Conjecture. This two-volume set brings together over one hundred of Bing's research, expository, andmiscellaneous papers. These works range over a great variety of topics in topology, including the topology of manifolds, decomposition spaces, continua, metrization, general topology, and geometric topology. In addition, there are a number of papers in the areas of convex functions, linearity, and conformalvarieties. The introductory section in the first volume provides historical background on Bing's life and achievements.

This collection will appeal to mathematicians in all areas, and especially those in topology, as well as students, historians, and educators in the mathematical sciences, for it provides a complete historical summary of the mathematical events in the life of the man and the mathematician, R. H. Bing.
